A-PILLAR CORNER TRIM REMOVAL AND INSTALLATION

REMOVAL

1. A-Pillar Corner Trim
    1. Open the front door.
    2. Apply protective tape around the body to prevent damage, carefully insert a appropriate trim tool next to the upper clip (A), and detach the clip by prying on the A-pillar corner trim (B). Pull back the A-pillar corner trim by hand to detach the lower clips (C), then remove the trim.

Fig. 1: Identifying Upper Clip And Lower Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. A-Pillar Corner Trim
    1. Install the A-pillar corner trim (A). Make sure the clips (B) snap into place securely.

GETtheMANUALS.org

4. Front Seat Belt Lower Anchor Bolt - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Slide the front seat forward fully, carefully pry up on the bottom edge of the anchor cover (A) at the pry point (B) with the appropriate trim tool to release the hooks (C) and the tab (D), then remove the cover by pulling it up.

Fig. 11: Identifying Anchor Cover, Pry Points, Hooks And Tab
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the lower anchor bolt.

Fig. 12: Removing Lower Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Battery Terminal (SRS) - Disconnection
   1. Make sure the ignition switch is in LOCK (0).

GETtheMANUALS.org

2. Disconnect and isolate the negative cable (A) from the battery.

NOTE: Always disconnect the negative side first.

3. Disconnect the positive cable (B) from the battery.
4. Wait at least 3 minutes before starting work.

Fig. 13: Identifying Positive And Negative Cables Of Battery
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Front Seat - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Detach the hooks (A), then remove both seat track end covers (B).
2. The driver's seat is shown; repeat on the passenger's seat.

GETtheMANUALS.org

GRAB HANDLE REMOVAL AND INSTALLATION

SPECIAL TOOL DESCRIPTION

Image	Description/Tool Number
	Push Pin/Grab Rail Cap Pliers 07AAC-001A100

REMOVAL

1. Grab Handle
    1. Lower the grab handle (A).
    2. Insert the tips of the push pin/grab rail cap pliers (B) into the notch.

GETtheMANUALS.org

Fig. 85: Inserting Tips Of Push Pin/Grab Rail Cap Pliers Into Notch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Gently squeeze the handles of the push pin/grab rail cap pliers (A), and pull the cap (B) straight out.

Fig. 86: Pulling Cap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the grab handle (A).

GETtheMANUALS.org

Fig. 87: Identifying Grab Handle
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the clips (A).

Fig. 88: Removing Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Grab Handle - Check
    1. If the side curtain airbag has not deployed, inspect the grab handle (A) for damage. A damaged grab handle may cause the side curtain airbag to deploy improperly, possibly causing injury. Replace the grab handle if it has any of the following damage:
        - Any cracks or breakage in the grab handle
        - Any cracks or stress-whitening in the caps (B)

GETtheMANUALS.org

Fig. 89: Identifying Grab Handle And Caps
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Grab Handle
    1. Install the clips (A) on the grab handle (B).
    2. Install the caps (C) fully into the clips.

Fig. 90: Installing Caps On Grab Handle
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Position the grab handle (A) on the grab handle bracket (B).
4. Push on the grab handle until the clips (C) snap into place securely.

HEADLINER REMOVAL AND INSTALLATION

SPECIAL TOOL DESCRIPTION

Image	Description/Tool Number
	Push Pin/Grab Rail Cap Pliers 07AAC-001A100

REMOVAL

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

1. Battery Terminal (SRS) - Disconnection
    1. Make sure the ignition switch is in LOCK (0).
    2. Disconnect and isolate the negative cable (A) from the battery.

GETtheMANUALS.org

NOTE: Always disconnect the negative side first.

3. Disconnect the positive cable (B) from the battery.
4. Wait at least 3 minutes before starting work.

Fig. 92: Identifying Positive And Negative Cables Of Battery
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Door Sill Trim - Both Sides

NOTE: Repeat on the opposite side.

1. Detach the hooks (A) and the tabs (B) from the kick panel (C) and the B-pillar lower trim (D), and pull up the front door inner sill trim (E) by hand to detach the clips (F), then remove the trim.

GETtheMANUALS.org

Fig. 93: Pulling Up Front Door Inner Sill Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Door Opening Seal As Needed - Both Sides

NOTE: Repeat on the opposite side.

1. Pull out the front door opening seal (A) from the trim hooks (B) around the front door opening flange, then detach the seal as needed.

Fig. 94: Identifying Front Door Opening Seal And Trim Hooks

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. A-Pillar Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Pull out the A-pillar trim (A) by hand to release the clips (B, C).

Fig. 95: Pulling Out A-Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Put a shop towel (A) in the opening between the A-pillar trim (B) and the dashboard to prevent dropping the A-pillar clips.

Fig. 96: Putting Shop Towel In Opening Between A-Pillar Trim (B) And Dashboard

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Pull out and up on the A-pillar trim (A) to release it from the dashboard.

NOTE: The upper clip will stay in the body.

Fig. 97: Pulling Out And Up On A-Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the upper clip (A) from the body.

Fig. 98: Removing Upper Clip From Body
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rear Door Sill Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Pull the release strap to fold down the rear seat, then lift-up and latch the rear seat-back in the

GETtheMANUALS.org

upright position.

2. Detach the hooks (A) and the tab (B) from the B-pillar lower trim (C) and the rear side trim panel (D), and pull up the rear door inner sill trim (E) by hand to detach the clips (F, G), then remove the trim.

Fig. 99: Pulling Up Rear Door Inner Sill Trim

2. Grab Handle Bracket

GETtheMANUALS.org

1. Install the front side grab handle bracket (A), then install the grab handle bracket mounting bolts (B). Make sure the hooks (C) snap into place securely.

   Front side

   Fig. 149: Identifying Front Side Grab Handle Bracket, Mounting Bolts And Hooks
   Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Headliner - Check
   1. If the side curtain airbag has deployed, replace the headliner and removed trim pieces, along with the other parts listed for side curtain airbag deployment.
   2. To prevent the side curtain airbags from deploying improperly and possibly causing injury, inspect the headliner and all removed trim. Replace any pieces with the following damage:
      - Any creases or tears in the headliner (A)
      - Any damages around the grab handle holes (B) or the sunvisor holes (C) in the headliner
      - Any clip bases (D) which have come off the headliner
      - Any fasteners (E) or clip bases (F) which have come off the headliner

5. Sunvisor Holder
    1. Install the holder (A) into the holder grommet (B) by turning it 45 ° clockwise.
    2. Install the holder and the holder grommet as an assembly into the body by pushing it until the hooks snap into place securely.

Fig. 157: Identifying Holder And Holder Grommet
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Sunvisor - Check
    1. If the side curtain airbag has deployed, replace the sunvisor, along with the other parts listed for side curtain airbag deployment.
    2. If the side curtain airbag has not deployed, inspect the sunvisor for damage. A damaged sunvisor may cause the side curtain airbags to deploy improperly, possibly causing injury. Replace the sunvisor if it has any of the following damage:
        - Any cracks in the sunvisor bracket (A)
        - Any cracks in the sunvisor bracket cover (B)

GETtheMANUALS.org

- Any bends or cracks in the sunvisor shaft (C)
- Any cracks in the sunvisor base (D)
- Any cracks in the vanity mirror base (E)

3. If the holder grommet is damaged or stress-whitened, replace the holder grommet and the holder as an assembly.

Fig. 158: Identifying Cracks On Sunvisor Bracket, Cover, Shaft, Survisor And Vanity Mirror Base
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Sunvisor - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Connect the connector (A), and install the sunvisor (B).

Fig. 159: Identifying Sunvisor And Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

2. While holding the bracket cover (A), rotate the sunvisor (B) forward until the tab (C) snaps into place.
3. Gently pull down on the sunvisor to make sure it is properly secured in the body.
4. Rotate the sunvisor into the holder (D).

Fig. 160: Rotating Sunvisor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Grab Handle - Check
   1. If the side curtain airbag has not deployed, inspect the grab handle (A) for damage. A damaged grab handle may cause the side curtain airbag to deploy improperly, possibly causing injury. Replace the grab handle if it has any of the following damage:
      - Any cracks or breakage in the grab handle
      - Any cracks or stress-whitening in the caps (B)

14. Roof Console Assembly
    1. Connect the connectors (A), then install the roof console assembly (B).
    2. Install the screws (C, D), then install the lenses (E).

GETtheMANUALS.org

Fig. 169: Identifying Roof Console Assembly, Connectors And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Quarter Pillar Trim - Check
    1. If the side curtain airbag has deployed, replace the quarter pillar trim (A), along with the other parts listed for side curtain airbag deployment.
    2. If the side curtain airbag has not deployed, check the quarter pillar trim and note the following items:
        - To prevent the side curtain airbags from deploying improperly and possibly causing injury, inspect the quarter pillar trim and replace it with a new one if it has any of the following damage:
            - Any cracks, deformations, or stress-whitening in the quarter pillar trim
            - Any cracks or stress-whitened areas in the clip seating surfaces (B)
        - After checking and adjusting the overlap between the headliner and the quarter pillar trim, replace the upper clip (C) with a new one.
        - If the clips (D) are damaged or stress-whitened, replace them with new ones.

GETtheMANUALS.org

Fig. 170: Identifying Quarter Pillar Trim, Clip Seating Surfaces And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Headliner/Pillar Trim Overlap - Check

Checking and Adjusting the Headliner/Pillar Trim Overlap

To prevent the side curtain airbag from deploying and damaging the pillar trim (A-pillar trim, B-pillar trim, quarter pillar trim), the overlap between the headliner and pillar trim must be 8.0+0/-2.0 mm (0.31+0/-0.08 in). To check the overlap, do this:

1. Install the headliner (A) and the pillar trim (B).

GETtheMANUALS.org

Fig. 171: Identifying Headliner And Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

This illustration shows A-pillar .

2. Apply masking tape (A) to the headliner (B) to mark the upper edge of the pillar trim (C).

Fig. 172: Applying Masking Tape To Headliner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

This illustration shows A-pillar .

3. Remove the pillar trim, and measure the headliner overlap.
   - If the overlap is 8.0+0/-2.0 mm (0.31+0/-0.08 in), remove the tape, and install the pillar trim.
   - If the overlap is more than 8.0 mm (0.31 in), go to step 4.

Fig. 173: Measuring Healiner Overlap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

This illustration shows A-pillar .

4. Carefully trim the headliner with a utility knife, reducing the overlap to 8.0+0/-2.0 mm (0.31+0/-

GETtheMANUALS.org

0.08 in).

5. Remove the tape, and install the pillar trim.

Fig. 174: Triming Headliner Using Utility Knife
Courtesy of AMERICAN HONDA MOTOR CO., INC.

This illustration shows A-pillar .

17. Quarter Pillar Trim - Both Sides
    1. Install a new clip (A) to the quarter pillar trim (B).

Fig. 175: Installing Clip To Quarter Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Pass the rear seat belt lower anchor (A) through the hole in the quarter pillar trim (B).
    3. Fit the clips into the holes in the quarter pillar.
    4. Lightly push the quarter pillar trim into place, then install the trim.

GETtheMANUALS.org

NOTE:

- **Make sure the side curtain airbag is not tucked under the clips or the ribs.**
- **Do not push too hard on the quarter pillar trim. If you push too hard, the clip will be damaged, and it will not hold the trim properly.**
- **Gently tug on the quarter pillar trim to verify that all clips are securely fastened.**
- **Make sure the clips (C, D, and E) snap into place securely.**

Fig. 176: Identifying Rear Seat Belt Lower Anchor, Quarter Pillar Trim And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Rear Side Trim Panel - Both Sides

NOTE: **Repeat this procedure on the opposite side.**

1. Install the rear seat release cable (A) to the clips (B) of the rear side trim panel (C).

NOTE: **Align the marks (D) with the clips as shown.**

GETtheMANUALS.org

27. B-Pillar Upper/Lower Trim - Check
    1. If the side curtain airbag has deployed, replace the B-pillar upper trim (A) and the B-pillar lower trim (B), along with the other parts listed for side curtain airbag deployment.
    2. If the side curtain airbag has not deployed, check the B-pillar upper/lower trim and note the following items:
        - To prevent the side curtain airbags from deploying improperly and possibly causing injury, inspect the trim and replace it with a new one if it has any of the following damage:
            - Any cracks or deformations in the B-pillar upper trim or the upper hooks (C), or any stress-whitened areas in the upper part of the trim
            - Any cracks or deformations in the B-pillar lower trim, or any breakages in the part (D) fitted with the B-pillar upper trim
            - Any cracks or stress-whitening areas in the clip seating surfaces (E)
        - If the clips (F) are damaged or stress-whitened, replace them with new ones.

Trim inspection

GETtheMANUALS.org

28. Headliner/Pillar Trim Overlap - Check

Checking and Adjusting the Headliner/Pillar Trim Overlap

To prevent the side curtain airbag from deploying and damaging the pillar trim (A-pillar trim, B-pillar trim, quarter pillar trim), the overlap between the headliner and pillar trim must be 8.0+0/-2.0 mm (0.31+0/-0.08 in). To check the overlap, do this:

1. Install the headliner (A) and the pillar trim (B).

GETtheMANUALS.org

Fig. 196: Identifying Headliner And Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

This illustration shows A-pillar .

2. Apply masking tape (A) to the headliner (B) to mark the upper edge of the pillar trim (C).

Fig. 197: Applying Masking Tape To Headliner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

This illustration shows A-pillar .

3. Remove the pillar trim, and measure the headliner overlap.
   - If the overlap is 8.0+0/-2.0 mm (0.31+0/-0.08 in), remove the tape, and install the pillar trim.
   - If the overlap is more than 8.0 mm (0.31 in), go to step 4.

Fig. 198: Measuring Headliner Overlap

Courtesy of AMERICAN HONDA MOTOR CO., INC.

33. Rear Door Sill Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Pull the release strap to fold down the rear seat, then lift-up and latch the rear seat-back in the upright position.
2. Install the rear door inner sill trim (A). Make sure the clips (B, C), the hooks (D), and the tab (E) snap into place securely.

Fig. 204: Identifying Rear Door Inner Sill Trim, Clips, Hooks And Tab
Courtesy of AMERICAN HONDA MOTOR CO., INC.

34. A-Pillar Trim - Check
    1. If the side curtain airbag has deployed, replace the A-pillar trim (A), along with the other parts listed for side curtain airbag deployment.
    2. If the side curtain airbag has not deployed, check the A-pillar trim and note the following items:
        - To prevent the side curtain airbags from deploying improperly and possibly causing injury, inspect the A-pillar trim and replace it with a new one if it has any of the following damage:
            - Any cracks, deformations, or stress-whitened areas in the A-pillar trim
            - Any cracks or stress-whitening in the clip seating surfaces (B)
        - After checking and adjusting the overlap between the headliner and the A-pillar trim, replace the upper clip (C) with a new one.
        - If the clips (D) are damaged or stress-whitened, replace them with new ones.

GETtheMANUALS.org

Fig. 205: Replacing Upper Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

35. Headliner/Pillar Trim Overlap - Check

Checking and Adjusting the Headliner/Pillar Trim Overlap

To prevent the side curtain airbag from deploying and damaging the pillar trim (A-pillar trim, B-pillar trim, quarter pillar trim), the overlap between the headliner and pillar trim must be 8.0+0/-2.0 mm (0.31+0/-0.08 in). To check the overlap, do this:

1. Install the headliner (A) and the pillar trim (B).

Fig. 206: Identifying Headliner And Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

This illustration shows A-pillar .

2. Apply masking tape (A) to the headliner (B) to mark the upper edge of the pillar trim (C).

Fig. 207: Applying Masking Tape (A) To Headliner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

This illustration shows A-pillar .

3. Remove the pillar trim, and measure the headliner overlap.
   - If the overlap is 8.0+0/-2.0 mm (0.31+0/-0.08 in), remove the tape, and install the pillar trim.
   - If the overlap is more than 8.0 mm (0.31 in), go to step 4.

Fig. 208: Measuring Headliner Overlap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

This illustration shows A-pillar .

4. Carefully trim the headliner with a utility knife, reducing the overlap to 8.0+0/-2.0 mm (0.31+0/-0.08 in).
5. Remove the tape, and install the pillar trim.

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

This illustration shows A-pillar .

36. A-Pillar Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Carefully install a new upper clip (A) to the A-pillar trim (B).

Fig. 210: Installing Upper Clip Into A-Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Insert the bottom portion of the A-pillar trim (A) into the dashboard (B). Place the trim over the A-

GETtheMANUALS.org

pillar (C), and fit its upper clip (D) and the other clips (E) into the holes (F) in the A-pillar, then lightly push the trim into place.

NOTE:

- **Make sure the side curtain airbag is not tucked under the clips or the trim ribs.**
- **Do not push too hard on the A-pillar trim. If you push too hard, the clip will be damaged, and it will not hold the trim properly.**
- **Gently tug on the A-pillar trim to verify that all clips are securely fastened.**

Fig. 211: Inserting Bottom Portion Of A-Pillar Trim Into Dashboard
Courtesy of AMERICAN HONDA MOTOR CO., INC.

37. Front Door Opening Seal As Needed - Both Sides

NOTE: **Repeat this procedure on the opposite side.**

1. Install the front door opening seal (A). Make sure the seal is installed securely into the hooks (B).

GETtheMANUALS.org

Fig. 212: Identifying Front Door Opening Seal And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

38. Front Door Sill Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Install the front door inner sill trim (A). Make sure the clips (B), the hooks (C), and the tabs (D) snap into place securely.

Fig. 213: Installing Front Door Opening Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

39. Battery Terminal (SRS) - Reconnection

NOTE: If the battery performance is abnormal, test the battery.

1. Clean the battery terminals.
2. Connect the positive cable (A) to the battery.

NOTE: Always connect the positive side first.

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

Fig. 214: Identifying Positive And Negative Cables Of Battery

INSTALLATION

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

1. Quarter Pillar Trim - Check
    1. If the side curtain airbag has deployed, replace the quarter pillar trim (A), along with the other parts listed for side curtain airbag deployment.
    2. If the side curtain airbag has not deployed, check the quarter pillar trim and note the following items:
        - To prevent the side curtain airbags from deploying improperly and possibly causing injury, inspect the quarter pillar trim and replace it with a new one if it has any of the following damage:
            - Any cracks, deformations, or stress-whitening in the quarter pillar trim
            - Any cracks or stress-whitened areas in the clip seating surfaces (B)
        - After checking and adjusting the overlap between the headliner and the quarter pillar trim, replace the upper clip (C) with a new one.
        - If the clips (D) are damaged or stress-whitened, replace them with new ones.

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Headliner/Pillar Trim Overlap - Check

Checking and Adjusting the Headliner/Pillar Trim Overlap

To prevent the side curtain airbag from deploying and damaging the pillar trim (A-pillar trim, B-pillar trim, quarter pillar trim), the overlap between the headliner and pillar trim must be 8.0+0/-2.0 mm (0.31+0/-0.08 in). To check the overlap, do this:

1. Install the headliner (A) and the pillar trim (B).

GETtheMANUALS.org

Fig. 286: Identifying Headliner And Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

This illustration shows A-pillar .

2. Apply masking tape (A) to the headliner (B) to mark the upper edge of the pillar trim (C).

Fig. 287: Applying Masking Tape To Headliner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

This illustration shows A-pillar .

3. Remove the pillar trim, and measure the headliner overlap.
   - If the overlap is 8.0+0/-2.0 mm (0.31+0/-0.08 in), remove the tape, and install the pillar trim.
   - If the overlap is more than 8.0 mm (0.31 in), go to step 4.

Fig. 288: Measuring Healiner Overlap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

This illustration shows A-pillar .

4. Carefully trim the headliner with a utility knife, reducing the overlap to 8.0+0/-2.0 mm (0.31+0/-

GETtheMANUALS.org

0.08 in).

5. Remove the tape, and install the pillar trim.

Fig. 289: Triming Headliner Using Utility Knife
Courtesy of AMERICAN HONDA MOTOR CO., INC.

This illustration shows A-pillar .

3. Quarter Pillar Trim
   1. Install a new clip (A) to the quarter pillar trim (B).

Fig. 290: Installing Clip To Quarter Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

   2. Pass the rear seat belt lower anchor (A) through the hole in the quarter pillar trim (B).
   3. Fit the clips into the holes in the quarter pillar.
   4. Lightly push the quarter pillar trim into place, then install the trim.

GETtheMANUALS.org

NOTE:

- **Make sure the side curtain airbag is not tucked under the clips or the ribs.**
- **Do not push too hard on the quarter pillar trim. If you push too hard, the clip will be damaged, and it will not hold the trim properly.**
- **Gently tug on the quarter pillar trim to verify that all clips are securely fastened.**
- **Make sure the clips (C, D, and E) snap into place securely.**

Fig. 291: Identifying Rear Seat Belt Lower Anchor, Quarter Pillar Trim And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear Side Trim Panel
    1. Install the rear seat release cable (A) to the clips (B) of the rear side trim panel (C).

NOTE: **Align the marks (D) with the clips as shown.**

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. B-Pillar Upper/Lower Trim - Check
    1. If the side curtain airbag has deployed, replace the B-pillar upper trim (A) and the B-pillar lower trim (B), along with the other parts listed for side curtain airbag deployment.
    2. If the side curtain airbag has not deployed, check the B-pillar upper/lower trim and note the following items:
        - To prevent the side curtain airbags from deploying improperly and possibly causing injury, inspect the trim and replace it with a new one if it has any of the following damage:
            - Any cracks or deformations in the B-pillar upper trim or the upper hooks (C), or any stress-whitened areas in the upper part of the trim
            - Any cracks or deformations in the B-pillar lower trim, or any breakages in the part (D) fitted with the B-pillar upper trim
            - Any cracks or stress-whitening areas in the clip seating surfaces (E)
        - If the clips (F) are damaged or stress-whitened, replace them with new ones.

Trim inspection

14. Headliner/Pillar Trim Overlap - Check

Checking and Adjusting the Headliner/Pillar Trim Overlap

To prevent the side curtain airbag from deploying and damaging the pillar trim (A-pillar trim, B-pillar trim, quarter pillar trim), the overlap between the headliner and pillar trim must be 8.0+0/-2.0 mm (0.31+0/-0.08 in). To check the overlap, do this:

1. Install the headliner (A) and the pillar trim (B).

GETtheMANUALS.org

Fig. 311: Identifying Headliner And Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

This illustration shows A-pillar .

2. Apply masking tape (A) to the headliner (B) to mark the upper edge of the pillar trim (C).

Fig. 312: Applying Masking Tape To Headliner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

This illustration shows A-pillar .

3. Remove the pillar trim, and measure the headliner overlap.
   - If the overlap is 8.0+0/-2.0 mm (0.31+0/-0.08 in), remove the tape, and install the pillar trim.
   - If the overlap is more than 8.0 mm (0.31 in), go to step 4.

Fig. 313: Measuring Headliner Overlap

SIDE WINDSHIELD TRIM REMOVAL AND INSTALLATION

REMOVAL

1. Left Windshield Wiper Arm Assembly

NOTE: Set the windshield wiper arms to the auto-stop position before removal.

1. Remove the wiper arm cap (A).
2. Remove the nut (B), then remove the left wiper arm (C).

GETtheMANUALS.org

Fig. 353: Identifying Wiper Arm Cap, Left Wiper Arm And Nut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Fender Trim
    1. Remove the clips (A, B).
    2. Pull up the front fender trim (C) by hand to detach the clips (D), then remove the trim.

Fig. 354: Identifying Front Fender Trim And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Left Cowl Top Cover
    1. Remove the clip (A).
    2. Pull out the hood rear seal (B).
    3. Detach the hooks, and remove the cowl top cover (C).

GETtheMANUALS.org

Fig. 355: Identifying Hood Rear Seal, Clip And Cowl Top Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Side Cowl Cover
    1. Detach the hook (A) at the inside of the cowl cover (B).
    2. Release the hooks (C) from the cowl cover and the front fender (D), then remove the side cowl cover (E).
    3. Right side: Detach the windshield washer tube.

GETtheMANUALS.org

Fig. 356: Releasing Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Roof Rail
    1. Remove the caps (A). (4 Places)

Fig. 357: Identifying Caps
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

2. Remove the roof rail (A).

Fig. 358: Identifying Roof Rail
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. If necessary, slide the rear roof side trim (A) forward to release it from the body.

Fig. 359: Sliding Rear Roof Side Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Side Windshield Trim
   1. Carefully insert the trim tool (A) under the trim next to the lower clip (B).
   2. While pulling up the clip area of the trim by hand, push each of the six small hooks (C) to release the clip from the retainer (D) on the A-pillar. Do not pry up the clip if it is hard to release it from the clip on the A-pillar.
   3. Gradually work your way up to release each of the upper clips (E, F, and G).

GETtheMANUALS.org

Fig. 360: Pulling Clip Area Of Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. If necessary, remove the retainers (A, B) from the A-pillar.
5. Carefully rub off the adhesive tape (C) under the retainers while heating it with a heat gun.
6. Clean the body bonding surface with a shop towel dampened in isopropyl alcohol. After cleaning, keep oil, grease, and water from getting on the clean surface.

GETtheMANUALS.org

Fig. 361: Removing Retainers From A-Pillar
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Side Windshield Trim
    1. Install the retainers (A, B) on the A-pillar.
    2. Peel the adhesive backing away from the upper retainers and the lower retainer.
    3. Line up the retainers with the alignment marks (C) on the body, and attach the retainers with adhesive tape (D).
    4. Apply epoxy two-part adhesive (E) around the edge of the retainers as shown.

Fig. 362: Identifying Alignment Marks And Retainers

GETtheMANUALS.org

GETtheMANUALS.org

6. Left Windshield Wiper Arm Assembly

NOTE: Set the wiper arms to the auto-stop position before installation.

1. Install the wiper arm (A), the nut (B), and the cap (C).

Fig. 370: Identifying Wiper Arm, Nut And Cap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Windshield Wiper Arm - Adjustment
   1. **Adjust the windshield wiper arms** See **WIPER ARM REMOVAL AND INSTALLATION** or **WIPER ARM/NOZZLE ADJUSTMENT** .

SUNVISOR REMOVAL AND INSTALLATION

REMOVAL

1. Sunvisor
   1. Push the tab (A) with a flat-tip screwdriver through the hole in the front side of the bracket cover (B).

NOTE: Make sure the tab is unlocked.

GETtheMANUALS.org

Fig. 371: Pushing Tab
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. While pushing in the tab (A) with a flat-tip screwdriver, release the sunvisor (B) from the holder (C), and rotate the sunvisor backward 45 °.

NOTE: **Make sure the tab slides into the bracket cover as you rotate the sunvisor.**

Fig. 372: Releasing Sunvisor From Holder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect the connector (A), then remove the sunvisor (B).

GETtheMANUALS.org

NOTE: **If the sunvisor cannot be removed, the tab has not rotated into the bracket cover. Repeat step 2 to rotate the tab.**

Fig. 373: Identifying Connector And Sunvisor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Sunvisor Holder
    1. If necessary, turn the sunvisor holder (A) 45 ° counterclockwise, then remove it from the holder grommet (B).

Fig. 374: Turning Sunvisor Holder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. If necessary, remove the holder grommet (A).

GETtheMANUALS.org

Fig. 375: Identifying Holder Grommet
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Sunvisor - Check
    1. If the side curtain airbag has deployed, replace the sunvisor, along with the other parts listed for side curtain airbag deployment.
    2. If the side curtain airbag has not deployed, inspect the sunvisor for damage. A damaged sunvisor may cause the side curtain airbags to deploy improperly, possibly causing injury. Replace the sunvisor if it has any of the following damage:
        - Any cracks in the sunvisor bracket (A)
        - Any cracks in the sunvisor bracket cover (B)
        - Any bends or cracks in the sunvisor shaft (C)
        - Any cracks in the sunvisor base (D)
        - Any cracks in the vanity mirror base (E)
    3. If the holder grommet is damaged or stress-whitened, replace the holder grommet and the holder as an assembly.

Fig. 376: Identifying Cracks On Sunvisor Bracket, Cover, Shaft, Sunvisior And Vanity Mirror Base

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Sunvisor Holder
    1. Install the holder (A) into the holder grommet (B) by turning it 45 ° clockwise.
    2. Install the holder and the holder grommet as an assembly into the body by pushing it until the hooks snap into place securely.

Fig. 377: Identifying Sunvisor And Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Sunvisor
    1. Connect the connector (A), and install the sunvisor (B).

Fig. 378: Identifying Sunvisor And Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. While holding the bracket cover (A), rotate the sunvisor (B) forward until the tab (C) snaps into place.
    3. Gently pull down on the sunvisor to make sure it is properly secured in the body.
    4. Rotate the sunvisor into the holder (D).

KEYLESS/POWER DOOR LOCKS/SECURITY SYSTEM TRIPPED SENSOR RECALL

The security system stores information on the last tripped sensor if the security system has been actuated. The information can be retrieved using the HDS.

To retrieve the last tripped sensor data, do this:

1. Select SECURITY from the BODY ELECTRICAL SYSTEM SELECT menu, enter HISTORY DATA.
2. Scroll through the data list.
   - Sensors that were actuated will indicate ON.
   - Sensors that were not actuated will indicate NONE.
3. Inspect the ON circuit for these problems:
   - Misadjusted or damaged switch.
   - Loose or corroded connections.
   - Intermittent short to ground.

NOTE: **If PANIC FRAME RECEPTION is indicated ON, inform the customer that it could have been set by something pressing the panic button of one of the registered transmitter (in a pocket or purse, under a stack of papers, etc.).**

KEYLESS/POWER DOOR LOCKS/SECURITY SYSTEM SYMPTOM TROUBLESHOOTING INDEX

NOTE: **If the door lock system and the keyless operation do not work, troubleshoot the door locks first. The system does not function when the ignition switch is ON (II).**

Symptom	Check Items	Also check for
The security system sounds randomly while the doors are locked.	**TRIPPED SENSOR HISTORY**	
All the doors will not lock or unlock with driver's door key cylinder or door lock switch or keyless transmitter.	• Poor ground (G402, G501, G604) • Blown No. B41 (20 A) fuse in the under-dash fuse/relay box • **MICU INPUT TEST**	

GETtheMANUALS.org

	• Transmitter test	
Driver's door will not lock or unlock.	• Poor ground (G402, G501, G604) • Blown No. B15 (10 A) and/or No. B30 (10 A) fuse in the under-dash fuse/relay box • Door switch test (check the door switch ON/OFF information with the HDS) • **ACTUATOR TEST**	
Left rear door will not lock or unlock.	• Poor ground (G402, G501, G601, G604) • Blown No. B9 (10 A) and/or No. B33 (15 A) fuse in the under-dash fuse/relay box • **MICU INPUT TEST** • Door switch test (check the door switch ON/OFF information with the HDS) • **ACTUATOR TEST**	
Front passenger's and right rear doors will not lock or unlock.	• Poor ground (G402, G501, G503, G604) • Blown No. B8 (15 A) and/or No. B32 (15 A) fuse in the under-dash fuse/relay box • **MICU INPUT TEST** • Door switch test (check the door switch ON/OFF information with the HDS) • **ACTUATOR TEST**	
Keyless operation does not work (LOCK, UNLOCK, PANIC).	**Keyless operation does not work (LOCK, UNLOCK, PANIC)**	
Passenger doors will not unlock with the transmitter or key cylinder switch, but will unlock with the inside door unlock switch.	Driver's door lock knob switch test (check for door lock knob switch ON/OFF information with the HDS)	
Doors automatically relock 30 seconds after being unlocked with the transmitter even though a door has been opened.	• **Doors automatically relock 30 seconds after being unlocked with the transmitter even though a door has been opened** • Door switch test (check the door switch ON/OFF information with the HDS)	
The horn does not sound and/or the headlights do not flash when the PANIC button on the transmitter is pressed.	**The horn does not sound and/or the headlights do not flash when the PANIC button on the transmitter is pressed**

INSTALLATION

1. Rear Door Panel
    1. Install the inner handle (A) in the door panel (B).
    2. Install the door panel. Make sure the clips (C) snap into place securely.

GETtheMANUALS.org

Fig. 60: Installing Rear Door Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the screw (A), then install the pull pocket mat (B).

Fig. 61: Identifying Pull Pocket Mat And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the screws (A) securing the inner handle (B).

GETtheMANUALS.org

Fig. 62: Identifying Inner Handle And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the inner handle cap (A). Make sure the upper hook (B) and the lower hooks (C) snap into place securely.

Fig. 63: Installing Inner Handle Cap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the rear door quarter inner trim (A). Make sure the clip (B) and the hooks (C) snap into place securely.

GETtheMANUALS.org

Fig. 64: Installing Rear Door Quarter Inner Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Rear Door Power Window Switch Panel
    1. Connect the connector (A), then install the power window switch panel (B). Make sure the clips (C) and the hooks (D) snap into place securely.

GETtheMANUALS.org

Fig. 65: Installing Rear Door Power Window Switch Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Door Panel
    1. Install the inner handle (A) in the door panel (B).
    2. Install the door panel. Make sure the clips (C) snap into place securely.

Fig. 66: Installing Front Door Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the screw (A), then install the pull pocket mat (B).

GETtheMANUALS.org

Fig. 67: Identifying Pull Pocket Mat And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the screws (A) securing the inner handle (B).

Fig. 68: Identifying Inner Handle And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the inner handle cap (A). Make sure the upper hook (B) and the lower hooks (C) snap into place securely.

GETtheMANUALS.org

Fig. 69: Installing Inner Handle Cap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Door Power Window Switch Panel
    1. Connect the connectors (A), then install the power window switch panel (B). Make sure the clips (C) and the hooks (D) snap into place securely.

Fig. 70: Installing Front Door Power Window Switch Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Door Mirror Cover
    1. With tweeter: Connect the connector (A).
    2. Install the door mirror cover (B). Make sure the clips (C) snap into place securely.

GETtheMANUALS.org

KEYLESS ENTRY TRANSMITTER TEST

TEST

1. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 72: Identifying Data Link Connector

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Transmitter - Test

NOTE:

- **If the doors unlock or lock with the transmitter, but the LED on the transmitter does not come on, the LED is faulty; replace the transmitter.**
- **If any door is open, you cannot lock the doors with the transmitter.**
- **If you unlocked the doors with the transmitter, but do not open any of the doors within 30 seconds, the doors relock automatically.**
- **The doors do not lock or unlock, and PANIC does not work with the transmitter if the ignition key is inserted in the ignition switch.**

Fig. 73: Identifying Transmitter (With HDS)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

With HDS

1. Press the transmitter lock or unlock button at least 10 times to reset the transmitter:
   - If the locks work, the transmitter is OK.
   - If any of the transmitter buttons do not work, replace the transmitter, then register the new transmitter.
   - If the locks don't work, go to step 2.
2. Select KEYLESS TRANSMITTER from the BODY ELECTRICAL SYSTEM SELECT menu, next select inspection then select INSPECTION, then KEYLESS CHECK.
3. Press the lock, unlock, or panic button and check the response on the screen of the HDS.

NOTE: **The door lock actuators may or may not cycle when receiving input from the transmitter:**

GETtheMANUALS.org

- **If KEYLESS ENTRY TRANSMITTER CODE WAS RECEIVED is indicated, the transmitter is OK.**
- **If DIFFERENT KEYLESS ENTRY TRANSMITTER CODE WAS RECEIVED is working but indicated, the transmitter is not registered to the vehicle. If necessary, register the transmitter.**
- **If KEYLESS ENTRY TRANSMITTER CODE WAS NOT RECEIVED is indicated, go to step 4.**

4. Open the transmitter and check for water damage:
   - If you find any water damage, replace the transmitter, then register the new transmitter.
   - If there is no water damage, go to step 5.
5. Replace the transmitter battery (A) (CR1616) with a new one, and press the lock or unlock button and check the response on the screen of the HDS:
   - If KEYLESS ENTRY TRANSMITTER CODE WAS RECEIVED is indicated, the transmitter is OK.
   - If KEYLESS ENTRY TRANSMITTER CODE WAS NOT RECEIVED is indicated, go to step 6.
6. Use a different known-good transmitter assembly and repeat steps 3 and 4.

NOTE: **The transmitter does not need to be programmed to the vehicle for this test:**

- **If DIFFERENT KEYLESS ENTRY TRANSMITTER CODE WAS RECEIVED is indicated, replace the transmitter and do the immobilizer system registration.**
- **If KEYLESS ENTRY TRANSMITTER CODE WAS NOT RECEIVED is indicated, the immobilizer-keyless control unit is faulty, replace it and do the immobilizer system registration.**

NOTE: **The transmitter is combined with the immobilizer transponder, so when the transponder is registered by the HDS, the transmitter programming is completed automatically.**

GETtheMANUALS.org

Fig. 74: Identifying Transmitter Battery (With HDS)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Without HDS

1. Press the transmitter lock or unlock button at least 10 times to reset the transmitter:
   - If the locks work, the transmitter is OK.
   - If the locks do not work, go to step 2.
2. Open the transmitter, and check for water damage:
   - If you find any water damage, replace the transmitter and register the new transmitter.
   - If there is no water damage, go to step 3.

Fig. 75: Identifying Transmitter (Without HDS)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

3. Replace the transmitter battery (A) (CR1616) with a new one, and try to lock and unlock the doors with the transmitter by pressing the lock or unlock button at least 10 times:
   - If the doors lock and unlock, the transmitter is OK.
   - If the doors do not lock and unlock, go to step 4.
4. Reprogram and register the transmitter, then try to lock and unlock the doors:
   - If the doors lock and unlock, the transmitter is OK.
   - If the doors do not lock and unlock, substitute a known-good transmitter, register it and recheck. If still not operating, replace the immobilizer-keyless control unit.

NOTE: **As the keyless transmitter is combined with the immobilizer transponder, when the transponder is registered by the HDS, the keyless transmitter is also registered automatically.**

Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Refer to the Electrical Wiring Diagrams for the location of the under-dash fuse/relay box connectors.**
- **Before testing, check the No. B8 (15 A), No. B9 (10 A), No. B15 (10 A), No. B30 (10 A), No. B32 (15 A), No. B33 (15 A), and No. B41 (20 A) fuses in the under-dash fuse/relay box.**
- **There are two pairs of fuses in the same circuit (No. B8 and No. B32 fuses, No. B9 and No. B33 fuses, No. B15 and No. B30 fuses). If one fuse is blown, make sure to check the other fuse in the same circuit. If necessary, replace the blown fuse(s).**

1. Abnormal circuit check 1:
   - 1. **Connect the HDS to the data link connector (DLC)** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 2. Select DOOR LOCKS from the BODY ELECTRICAL SYSTEM SELECT menu with the HDS, and enter FUNCTION TESTS.
   - 3. Select UNLOCK ALL DOORS with the HDS.

   Do the door lock actuators work normally?

   YES : Go to step 22.

   NO : Driver's door lock circuit: go to step 2.

   NO : Front passenger's door lock circuit: go to step 7.

   NO : Left rear door lock circuit: go to step 12.

   NO : Right rear door lock circuit: go to step 17.

2. Open wire check (+B F/BOX MAIN line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Measure the voltage between test points 1 and 2 individually.

     Test condition IG LOCK (0)

     Test circuit +B F/BOX MAIN

     Test point 1 Under-dash fuse/relay box connector D (32P) No. 2 (BLU)

     Test point 2 Body ground

GETtheMANUALS.org

Fig. 87: Measuring Voltage Between Under-Dash Fuse/Relay Box Connector D (32P) No. 2 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The +B F/BOX MAIN wire is OK. Go to step 3.

NO : Repair an open or high resistance in the wire.

3. Open wire check (GND line):
   - 1. Disconnect the following connector.

     Under-dash fuse/relay box connector R (8P)

   - 2. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Under-dash fuse/relay box connector R (8P): disconnected

     Test circuit GND

     Test point 1 Under-dash fuse/relay box connector R (8P) No. 7 (BLK)

     Test point 2 Body ground

GETtheMANUALS.org

Fig. 88: Checking Continuity Between Under-Dash Fuse/Relay Box Connector R (8P) No. 7 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The GND wire is OK. Go to step 4.

NO : Repair an open or high resistance in the ground wire or poor ground (G501).

4. Determine possible failure area (door latch, others):
   - 1. Disconnect the following connector.

     Driver's door latch 10P connector

   - 2. **TEST THE DOOR LOCK ACTUATOR**.

Is the door lock actuator OK?

YES : Go to step 5.

NO : Faulty door lock actuator; **REPLACE THE DOOR LATCH** .

5. Open wire check (DR DOOR UNLOCK line):
   - 1. Disconnect the following connector.

     Under-dash fuse/relay box connector N (13P)

   - 2. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Under-dash fuse/relay box connector R (8P): disconnected

     Driver's door latch 10P connector: disconnected

GETtheMANUALS.org

Under-dash fuse/relay box connector N (13P): disconnected

Test circuit DR DOOR UNLOCK

Test point 1 Under-dash fuse/relay box connector N (13P) No. 12 (GRY)

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The GND wire is OK. Go to step 9.

NO : Repair an open or high resistance in the ground wire or poor ground (G501).

9. Determine possible failure area (door latch, others):
   - 1. Disconnect the following connector.

     Front passenger's door latch 10P connector

   - 2. **TEST THE DOOR LOCK ACTUATOR**.

Is the door lock actuator OK?

YES : Go to step 10.

NO : Faulty door lock actuator; **REPLACE THE DOOR LATCH** .

10. Open wire check (AS SIDE D/L UNLOCK line):
    - 1. Disconnect the following connector.

      Under-dash fuse/relay box connector S (10P)

    - 2. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      Under-dash fuse/relay box connector R (8P): disconnected

      Front passenger's door latch 10P connector: disconnected

GETtheMANUALS.org

Is there continuity?

YES : The AS SIDE D/L LOCK wire is OK. Faulty MICU; **REPLACE THE UNDER-DASH FUSE/RELAY BOX** .

NO : Repair an open or high resistance in the wire.

22. Abnormal circuit check 2:
    - 1. Check the parameter(s) below with the HDS when each switch is operating.

Signal	Current conditions	
	Value	Unit
A/T Gear Position Switch (P)		
Driver's Door Lock Knob Switch (UNLOCK)		
Front Passenger's Door Lock Knob Sw. (UNLOCK)		
Driver's Rear Door Lock Knob Switch (UNLOCK)		
Passenger's Rear Door Lock Knob Sw. (UNLOCK)		

Is each switch information OK?

GETtheMANUALS.org

YES : Faulty MICU; **REPLACE THE UNDER-DASH FUSE/RELAY BOX** .

NO : Transmission range switch P position circuit troubleshooting: go to step 23.

NO : Driver's door lock knob switch circuit troubleshooting: go to step 29.

NO : Front passenger's door lock knob switch circuit troubleshooting: go to step 35.

NO : Left rear door lock knob switch circuit troubleshooting: go to step 41.

NO : Right rear door lock knob switch circuit troubleshooting: go to step 47.

23. Keyless/power door locks/security system check 1:
    - 1. With the transmission range switch in P position, check the parameter(s) below with the HDS.

Signal	Current conditions	
	Value	Unit
A/T Gear Position Switch (P)		

Is information indicator ON?

YES : Go to step 24.

NO : Go to step 26.

24. Determine possible failure area (transmission range switch, others):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Disconnect the following connector.

      Transmission range switch 10P connector

    - 3. Check the parameter(s) below with the HDS.

Signal	Current conditions	
	Value	Unit
A/T Gear Position Switch (P)		

Is information indicator OFF?

YES : **REPLACE THE TRANSMISSION RANGE SWITCH** .

NO : Go to step 25.

25. Shorted wire check (ATP-P line):
    - 1. Turn the ignition switch to LOCK (0).

GETtheMANUALS.org

- 2. Disconnect the following connector.

  Under-dash fuse/relay box connector D (32P)

- 3. Check for continuity between test points 1 and 2.

  Test condition IG LOCK (0)

  Disconnect the transmission range switch 10P connector: disconnected

  Under-dash fuse/relay box connector D (32P): disconnected

  Test circuit ATP-P

  Test point 1 Under-dash fuse/relay box connector D (32P) No. 22 (YEL)

  Test point 2 Body ground

Fig. 103: Checking Continuity Under-Dash Fuse/Relay Box Connector D (32P) No. 22 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to ground in the wire.

NO : The ATP-P wire is OK. Faulty MICU; **REPLACE THE UNDER-DASH FUSE/RELAY BOX** .

26. Keyless/power door locks/security system check 2:
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Disconnect the following connector.

      Transmission range switch 10P connector

GETtheMANUALS.org

- 3. Connect terminals A and B with a jumper wire.

  Terminal A Transmission range switch 10P connector No. 10 (BLK/BLU)

  Terminal B Body ground

Fig. 104: Connecting Jumper Wire Between Transmission Range Switch 10P Connector No. 10 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 4. Check the parameter(s) below with the HDS.

Signal	Current conditions	
	Value	Unit
A/T Gear Position Switch (P)		

Is information indicator ON?

YES : Go to step 27.

NO : Go to step 28.

27. Open wire check (GND line):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      Transmission range switch 10P connector: disconnected

      Test circuit GND

      Test point 1 Transmission range switch 10P connector No. 6 (BLK)

      Test point 2 Body ground

GETtheMANUALS.org

Fig. 105: Checking Continuity Between Transmission Range Switch 10P Connector No. 6 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The GND wire is OK. **REPLACE THE TRANSMISSION RANGE SWITCH** .

NO : Repair an open or high resistance in the ground wire or poor ground (G101).

28. Open wire check (ATP-P line):
    - 1. Connect terminals A and B with a jumper wire.

      Terminal A Under-dash fuse/relay box connector D (32P) No. 22 (YEL)

      Terminal B Body ground

Fig. 106: Connecting Jumper Wire Between Under-Dash Fuse/Relay Box Connector D (32P) No. 22 And Body Ground

    - 2. Check the parameter(s) below with the HDS.

	Current conditions

GETtheMANUALS.org

Signal	Value	Unit
A/T Gear Position Switch (P)		

Is information indicator ON?

YES : Repair an open or high resistance in the wire.

NO : The ATP-P wire is OK. Faulty MICU; **REPLACE THE UNDER-DASH FUSE/RELAY BOX** .

29. Keyless/power door locks/security system check 1:
    - 1. With the driver's door lock knob switch in LOCK position, check the parameter(s) below with the HDS.

Signal	Current conditions	
	Value	Unit
Driver's Door Lock Knob Switch (UNLOCK)		

Is information indicator ON?

YES : Go to step 30.

NO : Go to step 32.

30. Determine possible failure area (driver's door latch, others):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Disconnect the following connector.

      Driver's door latch 10P connector

    - 3. Check the parameter(s) below with the HDS.

Signal	Current conditions	
	Value	Unit
Driver's Door Lock Knob Switch (UNLOCK)		

Is information indicator OFF?

YES : Faulty driver's door lock knob switch; **REPLACE THE DRIVER'S DOOR LATCH** .

NO : Go to step 31.

31. Shorted wire check (DR SILCON UNLOCK line):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Disconnect the following connector.

GETtheMANUALS.org

Under-dash fuse/relay box connector X (10P)

- 3. Check for continuity between test points 1 and 2.

  Test condition IG LOCK (0)

  Driver's door latch 10P connector: disconnected

  Under-dash fuse/relay box connector X (10P): disconnected

  Test circuit DR SILCON UNLOCK

  Test point 1 Under-dash fuse/relay box connector X (10P) No. 4 (WHT)

  Test point 2 Body ground

     Test point 2 Body ground

Fig. 129: Checking Continuity Between Tailgate Latch Switch 4P Connector No. 2 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The GND wire is OK. Faulty tailgate latch switch; **REPLACE THE TAILGATE LATCH** .

NO : Repair an open or high resistance in the ground wire or poor ground (G603).

DOORS WILL NOT UNLOCK (OR LOCK) WITH THE TRANSMITTER, BUT WILL UNLOCK (OR LOCK) WITH THE DOOR LOCK SWITCH AND THE DOOR KEY CYLINDER SWITCH

GETtheMANUALS.org

Keyless/Power Door Locks/Security System Symptom Troubleshooting - Doors will not unlock (or lock) with the transmitter, but will unlock (or lock) with the door lock switch and the door key cylinder switch

Fig. 130: Keyless/Power Door Locks/Security System Symptom Troubleshooting Flowchart
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before troubleshooting, check the B-CAN DTCs. If any DTC is indicated, troubleshoot the indicated DTC first.**

1. Problem verification:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Remove the ignition key from the ignition switch.
   - 3. Close all the doors.
   - 4. Try to lock/unlock the doors with the keyless transmitter.

   Do the door lock actuators work normally?

   YES : Intermittent failure, the system is OK at this time.

   NO : Go to step 2.

2. Determine possible failure area (ignition switch or ignition switch wire, others):
   - 1. Open the driver's door.

   Does the key-in reminder chime sound?

   YES : Check for a short to ground in the KEY_SW wire. If OK, replace the ingition switch.

GETtheMANUALS.org

NO : Go to step 3.

3. Transmitter check:
   - 1. **DO THE TRANSMITTER TEST**.

   Is the transmitter OK?

   YES : Go to step 4.

   NO : Replace the transmitter, then **REGISTER THE NEW TRANSMITTER** .

4. Under-dash fuse/relay box check (substitution):
   - 1. Substitute a known-good under-dash fuse/relay box.
   - 2. Recheck the system.

   Is the system normal?

   YES : **REPLACE THE ORIGINAL UNDER-DASH FUSE/RELAY BOX** .

   NO : **Replace the immobilizer-keyless control unit** See **IMMOBILIZER-KEYLESS CONTROL UNIT REGISTRATION** or **IMMOBILIZER-KEYLESS CONTROL UNIT REMOVAL AND INSTALLATION** .

KEYLESS OPERATION DOES NOT WORK (LOCK, UNLOCK, PANIC)

Fig. 131: Keyless/Power Door Locks/Security System Symptom Troubleshooting Flowchart (Keyless Not Work)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before troubleshooting, check the B-CAN DTCs. If any DTC is indicated, troubleshoot the indicated DTC first.**

1. Immobilizer system check:

GETtheMANUALS.org

- 1. Try to start the engine.

Does the engine start?

YES : Go to step 2.

NO : **GO TO THE IMMOBILIZER SYSTEM SYMPTOM TROUBLESHOOTING** .

2. Transmitter check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. **TEST THE TRANSMITTER**.

Is the transmitter OK?

YES : **Replace the immobilizer-keyless control unit** See **IMMOBILIZER-KEYLESS CONTROL UNIT REGISTRATION** or **IMMOBILIZER-KEYLESS CONTROL UNIT REMOVAL AND INSTALLATION** .

NO : Replace the transmitter, then **REGISTER THE NEW TRANSMITTER** .

SECURITY ALARM SYSTEM WILL NOT ARM

NOTE:

- **Refer to the Electrical Wiring Diagrams for the location of the under-dash fuse/relay box connectors.**
- **Before troubleshooting, check the B-CAN DTCs. If any DTC is indicated, troubleshoot the indicated DTC first.**

1. Switch information check:
   - 1. Turn the ignition switch to ON (II).
   - 2. Check the parameter(s) below with the HDS.

Signal	Current conditions	
	Value	Unit
Trunk Lid/Tailgate Switch		
Security Hood Switch		

GETtheMANUALS.org

Driver's Door Lock Knob Switch (UNLOCK)		
Front Passenger's Door Lock Knob Sw. (UNLOCK)		
Driver's Rear Door Lock Knob Switch (UNLOCK)		
Passenger's Rear Door Lock Knob Sw. (UNLOCK)		
Driver's Door Switch		
Front Passenger's Door Switch		
Driver's Rear Door Switch		
Passenger's Rear Door Switch		
Driver's Door Key Cylinder Switch (LOCK)		
Driver's Door Key Cylinder Switch (UNLOCK)		

Is each switch information OK?

YES : Intermittent failure, the system is OK at this time.

NG : Tailgate latch switch circuit troubleshooting: go to step 2.

NG : Security hood switch circuit troubleshooting: go to step 8.

NG : Driver's door lock knob switch circuit troubleshooting: go to step 14.

NG : Front passenger's door lock knob switch circuit troubleshooting: go to step 20.

NG : Left rear door lock knob switch circuit troubleshooting: go to step 26.

NG : Right rear door lock knob switch circuit troubleshooting: go to step 32.

NG : Driver's door switch circuit troubleshooting: go to step 38.

NG : Front passenger's door switch circuit troubleshooting: go to step 43.

NG : Left rear door switch circuit troubleshooting: go to step 48.

NG : Right rear door switch circuit troubleshooting: go to step 53.

NG : Driver's door key cylinder switch circuit troubleshooting: go to step 58.

2. Keyless/power door locks/security system check 1:
   - 1. Check the parameter(s) below with the HDS.

Signal	**Current conditions**	
	Value	**Unit**
Trunk Lid/Tailgate Switch		

Is information indicator ON?

GETtheMANUALS.org

YES : Go to step 3.

NO : Go to step 5.

3. Determine possible failure area (tailgate latch switch, others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Tailgate latch switch 4P connector

   - 3. Check the parameter(s) below with the HDS.

Signal	Current conditions	
	Value	Unit
Trunk Lid/Tailgate Switch		

Is information indicator OFF?

YES : Faulty tailgate latch switch; **REPLACE THE TAILGATE LATCH** .

NO : Go to step 4.

4. Shorted wire check (TRUNK SW line):
   - 1. Disconnect the following connector.

     Under-dash fuse/relay box connector B (44P)

   - 2. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Tailgate latch switch 4P connector: disconnected

     Under-dash fuse/relay box connector B (44P): disconnected

     Test circuit TRUNK SW

     Test point 1 Under-dash fuse/relay box connector B (44P) No. 22 (PNK)

     Test point 2 Body ground

GETtheMANUALS.org

Fig. 141: Checking Continuity Between Under-Dash Fuse/Relay Box Connector B (44P) No. 22 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to ground in the wire.

NO : The TRUNK SW wire is OK. Faulty MICU; **REPLACE THE UNDER-DASH FUSE/RELAY BOX** .

5. Keyless/power door locks/security system check 2:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Tailgate latch switch 4P connector

   - 3. Connect terminals A and B with a jumper wire.

     Terminal A Tailgate latch switch 4P connector No. 1 (PNK)

     Terminal B Body ground

Fig. 142: Connecting Jumper Wire Between Tailgate Latch Switch 4P Connector No. 1 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

- 4. Check the parameter(s) below with the HDS.

Signal	Current conditions	
	Value	Unit
Trunk Lid/Tailgate Switch		

Is information indicator ON?

YES : Go to step 6.

NO : Go to step 7.

6. Open wire check (GND line):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Tailgate latch switch 4P connector: disconnected

     Test circuit GND

     Test point 1 Tailgate latch switch 4P connector No. 2 (BLK)

     Test point 2 Body ground

Fig. 143: Checking Continuity Between Tailgate Latch Switch 4P Connector No. 2 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The GND wire is OK. Faulty tailgate latch switch; **REPLACE THE TAILGATE LATCH** .

NO : Repair an open or high resistance in the ground wire or poor ground (G603).

7. Open wire check (TRUNK SW line):
   - 1. Connect terminals A and B with a jumper wire.

GETtheMANUALS.org

Terminal A Under-dash fuse/relay box connector B (44P) No. 22 (PNK)

Terminal B Body ground

Fig. 144: Connecting Jumper Wire Between Under-Dash Fuse/Relay Box Connector B (44P) No. 22 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 2. Check the parameter(s) below with the HDS.

Signal	Current conditions	
	Value	Unit
Trunk Lid/Tailgate Switch		

Is information indicator ON?

YES : Repair an open or high resistance in the wire.

NO : The TRUNK SW wire is OK. Faulty MICU; **REPLACE THE UNDER-DASH FUSE/RELAY BOX** .

8. Keyless/power door locks/security system check 1:
   - 1. With the hood opened, check the parameter(s) below with the HDS.

Signal	Current conditions	
	Value	Unit
Security Hood Switch		

Is information indicator ON?

YES : Go to step 9.

NO : Go to step 11.

GETtheMANUALS.org

9. Determine possible failure area (hood latch, others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Security hood switch 2P connector

   - 3. Check the parameter(s) below with the HDS.

Signal	Current conditions	
	Value	Unit
Security Hood Switch		

Is information indicator OFF?

YES : Faulty security hood switch; **REPLACE THE HOOD LATCH** .

NO : Go to step 10.

10. Shorted wire check (HOOD SW line):
    - 1. Disconnect the following connector.

      Under-dash fuse/relay box connector C (38P)

    - 2. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      Security hood switch 2P connector: disconnected

      Under-dash fuse/relay box connector C (38P): disconnected

      Test circuit HOOD SW

      Test point 1 Under-dash fuse/relay box connector C (38P) No. 27 (LT BLU)

      Test point 2 Body ground

GETtheMANUALS.org

Fig. 145: Checking Continuity Between Under-Dash Fuse/Relay Box Connector C (38P) No. 27 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to ground in the wire.

NO : The HOOD SW wire is OK. Faulty MICU; **REPLACE THE UNDER-DASH FUSE/RELAY BOX** .

11. Keyless/power door locks/security system check 2:
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Disconnect the following connector.

      Security hood switch 2P connector

    - 3. Connect terminals A and B with a jumper wire.

      Terminal A Security hood switch 2P connector No. 1 (LT BLU)

      Terminal B Body ground

Fig. 146: Connecting Jumper Wire Between Security Hood Switch 2P Connector No. 1 And Body Ground

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 4. Check the parameter(s) below with the HDS.

Signal	Current conditions	
	Value	Unit
Security Hood Switch		

Is information indicator ON?

YES : Go to step 12.

NO : Go to step 13.

12. Open wire check (GND line):
    - 1. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      Security hood switch 2P connector: disconnected

      Test circuit GND

      Test point 1 Security hood switch 2P connector No. 2 (BLK)

      Test point 2 Body ground

Fig. 147: Checking Continuity Between Security Hood Switch 2P Connector No. 2 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The GND wire is OK. Faulty security hood switch; **REPLACE THE HOOD LATCH** .

NO : Repair an open or high resistance in the ground wire or poor ground (G402).

GETtheMANUALS.org

13. Open wire check (HOOD SW line):
    - 1. Connect terminals A and B with a jumper wire.

      Terminal A Under-dash fuse/relay box connector C (38P) No. 27 (LT BLU)

      Terminal B Body ground

Fig. 148: Connecting Jumper Wire Between Under-Dash Fuse/Relay Box Connector C (38P) No. 27 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    - 2. Check the parameter(s) below with the HDS.

Signal	Current conditions	
	Value	Unit
Security Hood Switch		

Is information indicator ON?

YES : Repair an open or high resistance in the wire.

NO : The HOOD SW wire is OK. Faulty MICU; **REPLACE THE UNDER-DASH FUSE/RELAY BOX** .

14. Keyless/power door locks/security system check 1:
    - 1. With the driver's door lock knob switch in LOCK position, check the parameter(s) below with the HDS.

Signal	Current conditions	
	Value	Unit
Driver's Door Lock Knob Switch (UNLOCK)		

Is information indicator ON?

GETtheMANUALS.org

YES : Go to step 15.

NO : Go to step 17.

15. Determine possible failure area (driver's door latch, others):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Disconnect the following connector.

      Driver's door latch 10P connector

    - 3. Check the parameter(s) below with the HDS.

Signal	Current conditions	
	Value	Unit
Driver's Door Lock Knob Switch (UNLOCK)		

Is information indicator OFF?

YES : Faulty driver's door lock knob switch; **REPLACE THE DRIVER'S DOOR LATCH** .

NO : Go to step 16.

16. Shorted wire check (DR SILCON UNLOCK line):
    - 1. Disconnect the following connector.

      Under-dash fuse/relay box connector X (10P)

    - 2. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      Driver's door latch 10P connector: disconnected

      Under-dash fuse/relay box connector X (10P): disconnected

      Test circuit DR SILCON UNLOCK

      Test point 1 Under-dash fuse/relay box connector X (10P) No. 4 (WHT)

      Test point 2 Body ground

GETtheMANUALS.org

Fig. 149: Checking Continuity Between Under-Dash Fuse/Relay Box Connector X (10P) No. 4 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to ground in the wire.

NO : The DR SILCON UNLOCK wire is OK. Faulty MICU; **REPLACE THE UNDER-DASH FUSE/RELAY BOX** .

17. Keyless/power door locks/security system check 2:
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Disconnect the following connector.

      Driver's door latch 10P connector

    - 3. Connect terminals A and B with a jumper wire.

      Terminal A Driver's door latch 10P connector No. 5 (WHT)

YES : Go to step 33.

NO : Go to step 35.

33. Determine possible failure area (right rear door latch, others):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Disconnect the following connector.

      Right rear door latch 10P connector

    - 3. Check the parameter(s) below with the HDS.

Signal	Current conditions	
	Value	Unit
Passenger's Rear Door Lock Knob Sw. (UNLOCK)		

Is information indicator OFF?

YES : Faulty right rear door lock knob switch; **REPLACE THE RIGHT REAR DOOR LATCH** .

NO : Go to step 34.

34. Shorted wire check (RR AS SILCON UNLOCK line):
    - 1. Disconnect the following connector.

      Under-dash fuse/relay box connector W (24P)

    - 2. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      Right rear door latch 10P connector: disconnected

      Under-dash fuse/relay box connector W (24P): disconnected

      Test circuit RR AS SILCON UNLOCK

      Test point 1 Under-dash fuse/relay box connector W (24P) No. 4 (ORN)

      Test point 2 Body ground

GETtheMANUALS.org

Fig. 161: Checking Continuity Between Under-Dash Fuse/Relay Box Connector W (24P) No. 4 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to ground in the wire.

NO : The RR AS SILCON UNLOCK wire is OK. Faulty MICU; **REPLACE THE UNDER-DASH FUSE/RELAY BOX** .

35. Keyless/power door locks/security system check 2:
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Disconnect the following connector.

      Right rear door latch 10P connector

    - 3. Connect terminals A and B with a jumper wire.

      Terminal A Right rear door latch 10P connector No. 6 (LT BLU)

      Terminal B Body ground

NO : The DR KEY CYL LOCK wire is OK. Faulty MICU; **REPLACE THE UNDER-DASH FUSE/RELAY BOX** .

THE HORN DOES NOT SOUND AND/OR THE HEADLIGHTS DO NOT FLASH WHEN THE PANIC BUTTON ON THE TRANSMITTER IS PRESSED

GETtheMANUALS.org

Keyless/Power Door Locks/Security System Symptom Troubleshooting - The horn does not sound and/or the headlights do not flash when the PANIC button on the transmitter is pressed

Fig. 184: Keyless/Power Door Locks/Security System Symptom Troubleshooting Flowchart
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before troubleshooting, check the B-CAN DTCs. If any DTC is indicated, troubleshoot the indicated DTC first.**

1. Determine possible failure area (MICU, others):
   - 1. Press the PANIC button.

   Do the horns sound?

   YES : Go to step 3.

   NO : Go to step 2.

2. Horn operation check:
   - 1. Press the horn button.

   Do the horns sound?

   YES : Replace the transmitter, then **REGISTER THE NEW TRANSMITTER** .

   NO : Check the horn circuit.

3. MICU check:
   - 1. Turn the headlight switch ON.

   Do the headlights come on?

GETtheMANUALS.org

YES : Intermittent failure, the system is OK at this time.

NO : Check the lighting circuit. **DO THE MICU INPUT TEST** .

SECURITY HOOD SWITCH TEST

REMOVAL

1. Hood Latch
    1. Remove the bolts (A), then remove the hood latch (B) from the body. Disconnect the hood opener cable (C) from the latch.
    2. Disconnect the connector (D).

Fig. 185: Removing Hood Latch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TEST

1. Security Hood Switch - Test
    1. Check for continuity between the terminals in each switch position according to the table.
    2. If the continuity is not as specified, the security hood switch is faulty; replace the hood latch (A).

GETtheMANUALS.org

Fig. 186: Identifying Security Hood Switch Connector Terminals

ENGINE OIL LIFE INDICATOR - PROCEDURE 2

NOTE:

- **The vehicle must be stopped to reset the display. If a required service is done and the display is not reset, or if the maintenance display is reset without doing the service, the system will not show the proper maintenance timing. This can lead to serious mechanical problems because there will be no accurate record of when the required maintenance is needed.**
- **The engine oil life and the maintenance items can be reset independently only with the HDS.**

1. Turn the ignition switch to ON (II).
2. Push and release the Select/Reset knob repeatedly until the engine oil life indicator is displayed.
3. Press and hold the Select/Reset knob for about 10 seconds. The information display shows the reset mode display.

NOTE: **If you are resetting the display when the engine oil life is more than 15%, make sure any maintenance item(s) requiring service are done before resetting the display.**

GETtheMANUALS.org

Fig. 2: Screen Display - Reset Knob Cancels
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Twist the Select/Reset knob to select OIL LIFE, the display will begin to blink.
5. Push in on the Select/Reset knob to enter this selection, the OIL LIFE and the maintenance item code(s) will begin to blink.
6. Press and hold the Select/Reset knob again for about 5 seconds. The maintenance item code(s) will disappear, and the engine oil life will reset to 100%.

Fig. 3: Screen Display - Select/Reset Knob
Courtesy of AMERICAN HONDA MOTOR CO., INC.

ENGINE OIL LIFE INDICATOR - PROCEDURE 3

1. Turn ignition switch to ON (II). Press SELECT/RESET button on steering wheel until engine oil life is displayed.
2. Press SELECT/RESET button on steering wheel for 10 seconds. Display will change to "CUSTOM SETUP" mode. Press SELECT/RESET button on steering wheel. Maintenance item code(s) will disappear and engine oil life will reset to 100%.
3. To cancel resetting press INFO button on steering wheel. Press SELECT/RESET button. This cancels resetting procedure and normal display mode returns. Select "RESET" button and press SELECT/RESET button multi-information will.

ENGINE OIL LIFE INDICATOR - PROCEDURE 4

GETtheMANUALS.org

1. Turn ignition switch to ON (II) position.
2. Press SELECT button repeatedly until engine oil life display or service message is displayed.
3. Press the RESET button for about 10 seconds. A "MAINT RESET" message will appear.
4. Select appropriate answer - "MAINT RESET >N" (NO) or "MAINT RESET >Y" (YES) by pressing the select button. ">N" or ">Y" is displayed on the outside temperature display.
5. Select the "MAINT RESET >Y" (YES), and press and hold RESET button again to reset engine oil life to 100%.

ENGINE OIL LIFE INDICATOR - PROCEDURE 5

1. Turn ignition switch to ON (II). Press TRIP button until engine oil life indicator is displayed.
2. Press TRIP knob for 10 seconds. Engine oil life indicator and the maintenance item code(s) will blink. Press TRIP knob for more than 5 seconds. Maintenance items code(s) will disappear and engine oil life indicator will reset to 100%.

ENGINE OIL LIFE INDICATOR - PROCEDURE 6

1. Turn ignition switch to the ON (II) position.
2. If the engine oil life is not displayed, press the SEL/RESET button on the steering wheel repeatedly to display oil life.
3. Press and hold the SEL/RESET button on the steering wheel for more than 10 seconds. The remaining engine oil life reset mode will be shown on the multi-information display.
4. Select RESET by pressing the INFO button (ARROWS), then press the SEL/RESET button to reset the engine oil life display. The maintenance item code(s) will disappear, and the engine oil life will reset to 100%.

GETtheMANUALS.org

Fig. 4: Oil Life Display Controls (Maintenance Minder)

ENGINE OIL LIFE INDICATOR - PROCEDURE 7

NOTE: Use this procedure if the vehicle IS NOT equipped with a navigation system.

1. Turn ignition switch to ON (II) position.
2. Press the SELECT button repeatedly until the engine oil life is displayed.
3. Press the TRIP/RESET button for about 10 seconds. The engine oil life and the maintenance item code(s) will blink.
4. Press the TRIP/RESET button again for 5 seconds. The maintenance item code(s) will disappear, and the engine oil life will reset to 100%.

ENGINE OIL LIFE INDICATOR - PROCEDURE 8

NOTE: Use this procedure if the vehicle IS equipped with a navigation system.

1. Turn ignition switch to ON (II) position.
2. Press the SEL/RESET button on the dashboard until you see the engine oil life display.

GETtheMANUALS.org

3. Press and hold the SEL/RESET button for 10 seconds. The multi-information display will ask for a confirmation.
    - If you are sure you want to reset the display, press SEL/RESET button to select OK.
    - If you do not want to reset the display, press the INFO (ARROW) button to select CANCEL.

ENGINE OIL LIFE INDICATOR - PROCEDURE 9

1. Turn the ignition switch to ON (II).

NOTE: If system message(s) are displayed, press the INFO button to cancel the display.

2. Push the ARROW buttons repeatedly until the engine oil life indicator is displayed. See **Fig. 5**.
3. Select RESET with the ARROW buttons
4. Press the SEL/RESET button. The service code will disappear and the engine oil life display will return to 100%.
5. To cancel the oil life reset mode, select CANCEL, then press the SEL/RESET button.

Fig. 5: Resetting Oil Life Display (Maintenance Minder) - Typical
Courtesy of AMERICAN HONDA MOTOR CO., INC.

ENGINE OIL LIFE INDICATOR - PROCEDURE 10

Maintenance Minder messages beginning appearing when engine oil life is less than 15%. The Maintenance Minder indicator (wrench) stays on in the instrument panel after the engine oil life becomes 0%.

1. Turn the ignition switch to the ON (II) position.

GETtheMANUALS.org

NOTE: **Models with the smart entry system have an ENGINE START/STOP button instead of an ignition switch.**

2. Press the SELECT/RESET knob (on instrument cluster - lower right) repeatedly until the engine oil life is displayed. On models with steering wheel controls, press SEL/RESET button repeatedly until the engine oil life is displayed.
3. Press the SELECT/RESET knob for about 10 seconds. With steering wheel controls, press and hold the SEL/RESET button for 10 seconds or more. The information display shows the reset mode initial display.
4. Select the OIL LIFE display by pressing and releasing the SELECT/RESET knob. Press the SELECT/RESET knob for a few seconds to enter the oil life reset mode. With steering wheel controls, select RESET with the ARROW buttons to enter the oil life reset mode.
5. Press and hold the SELECT/RESET knob again for 5 seconds. With steering wheel controls, press the SEL/RESET button. The maintenance item code(s) will disappear and the engine oil life will reset to 100%.

ENGINE OIL LIFE INDICATOR - PROCEDURE 11

Maintenance Minder messages begin appearing on the i-MID when engine oil life is less than 15%. The system message indicator comes on along with the Maintenance Minder message.

1. Turn the ignition switch to ON (II).
2. Press the MENU button to go to the VEHICLE MENU screen. See **Fig. 6**.
3. Select VEHICLE INFORMATION with the PLUS (+) button, then press the SOURCE button.
4. Press the SOURCE button again to go to the MAINTENANCE INFO screen. The engine oil life appears on the i-MID.
5. Select YES with the MINUS (-) button, then press the SOURCE button. The displayed maintenance items disappear, and the engine oil life display returns to 100%. Any maintenance items that are necessary for this vehicle at the next maintenance service will appear.
6. To cancel the oil life reset mode, select No, then press the SOURCE button.

GETtheMANUALS.org

Fig. 6: Resetting Oil Life Display (Maintenance Minder)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

ENGINE OIL LIFE INDICATOR - PROCEDURE 12

1. Set the power mode to ON.
2. Press ARROWS button (right side of steering wheel) to select VEHICLE SETTINGS, then press the SEL/RESET button.
3. Press ARROWS button until MAINTENANCE MINDER RESET appears on the display.
4. Press the SEL/RESET button. The MAINTENANCE MINDER reset mode is displayed on the multi-information display.
5.
   - **To reset all due items at once** , select ALL DUE ITEMS with the ARROWS button, then press the SEL/RESET button. The displayed maintenance items disappear.
   - **To reset each item separately** , select ITEM # ONLY with the ARROWS button, then press the SEL/RESET button. The displayed maintenance item (i.e. #) disappears.

NOTE: **To cancel the Maintenance Minder reset mode, select CANCEL, then press the SEL/ RESET button.**

You can also reset the Maintenance Minder display using the audio/information screen. With the power mode in ON, press the SETTINGS button. Rotate to select: Vehicle Settings > Maintenance Info. > Maintenance Minder Reset.

ENGINE OIL LIFE INDICATOR - PROCEDURE 13

1. Press and hold the SEL/RESET button (right side of steering wheel), and turn the power switch ON. Make sure that the light control switch is in OFF.

GETtheMANUALS.org

2. Continue holding the SEL/RESET button for 10 seconds or more. The service reminder information reset mode is displayed on the multi-information display.
3. Select RESET using the ARROW buttons, then press the SEL/RESET button. The service information will disappear.
4. To cancel the service reminder information reset mode, select CANCEL, then press the SEL/RESET button.

MAINTENANCE REQUIRED REMINDER LIGHT

NOTE: **To determine the appropriate reset procedure, refer to MAINTENANCE REQUIRED REMINDER LIGHT RESET INDEX.**

1998-01	Maintenance Required Reminder Light Reset - Procedure 1
S2000	
2000-05	Maintenance Required Reminder Light Reset - Procedure 2

MAINTENANCE REQUIRED REMINDER LIGHT RESET - PROCEDURE 1

1. At each 7500 mile service interval, the MAINTENANCE REQUIRED light will change from Green to Yellow. If service is not performed (and light is not reset), the MAINTENANCE REQUIRED light will change from Yellow to Red.

GETtheMANUALS.org

2. When service has been completed, reset MAINTENANCE REQUIRED reminder light. To reset reminder light, turn ignition off. Insert ignition key in slot provided to the right of tachometer (or beside the indicator). See **Fig. 7**.

Fig. 7: Maintenance Reminder Light Reset
Courtesy of AMERICAN HONDA MOTOR CO., INC.

MAINTENANCE REQUIRED REMINDER LIGHT RESET - PROCEDURE 2

To reset MAINT REQ'D indicator light, turn ignition switch to OFF position. Push and hold the SELECT/RESET button and turn ignition switch to ON (II) position. Continue to hold button for more than 10 seconds or until MAINT REQ'D light goes out.

MAINTENANCE REQUIRED REMINDER LIGHT RESET - PROCEDURE 3

1. For the first 8000 miles after maintenance required indicator is reset, the MAINT REQ'D indicator light illuminates when the ignition is turned on, then will go out after 2 seconds. When mileage is 8000-10,000

GETtheMANUALS.org

miles, the MAINT REQ'D reminder light will illuminate for 2 seconds, then blink for 10 seconds, and then go out. When mileage exceeds 10,000 miles, MAINT REQ'D indicator light illuminates and stays on while ignition switch is in ON (II) position.

2. To reset the MAINT REQ'D indicator light, turn ignition switch to OFF position. Press and hold the SELECT/RESET button. While still holding button, turn ignition switch to ON position, with engine off. Hold SELECT/RESET button for about 10 seconds until indicator resets.
3. If MAINT REQ'D reminder light does not reset, ensure headlights, parking lights, or both are turned off when resetting reminder light. The MAINT REQ'D indicator cannot be reset if any of these lights are on. If vehicle is equipped with daytime running lights and lights come on when ignition switch is turned to ON (II) position, daytime running lights must be disabled before indicator light can be reset.

MAINTENANCE REQUIRED REMINDER LIGHT RESET - PROCEDURE 4

1. When distance driven since maintenance required indicator was reset is 6000 miles, the MAINT REQ'D reminder light will start to blink. After exceeding 7500 miles without having scheduled maintenance performed and MAINT REQ'D reminder light reset, light will remain on until it is reset.
2. To reset the light, turn ignition switch to OFF position. Press and hold TRIP button, located on lower right side of instrument cluster. While still holding TRIP button, turn ignition switch to ON position with engine off. Hold button for about 10 seconds until indicator resets.

OXYGEN SENSOR WARNING LIGHT

NOTE: To determine the appropriate reset procedure, refer to OXYGEN SENSOR WARNING LIGHT RESET INDEX.

OXYGEN SENSOR WARNING LIGHT RESET INDEX

Model & Year	Reset Procedure
Passport DX	
1994-95	Oxygen Sensor Warning Light Reset - Procedure 1

OXYGEN SENSOR WARNING LIGHT RESET - PROCEDURE 1

1. Heated Oxygen Sensor (HO2S) must be replaced every 90,000 miles. When odometer reaches 90,000 miles, O2S indicator light on dash will illuminate, and then every subsequent 90,000 miles. After servicing, turn off or reset warning light.

NOTE: Reset procedure is for first 90,000 mile reset. At every subsequent 90,000 mile reset, move screw back to previous hole.

2. To reset warning light, remove instrument cluster. Remove masking tape from hole "B". See **Fig. 8** or **Fig. 9** . Remove screw from hole "A" and insert into hole "B". Apply new masking tape to hole "A".

(1) There are no TPMS reset procedures required for these models. Ensure tires are inflated to recommend pressure. Tire pressure sensor IDs need to be memorized if new sensor or TPMS control unit is installed.

(2) This vehicle is equipped with an Indirect TPMS that does not use tire-mounted pressure sensors.

TPMS RESET - PROCEDURE 1

NOTE: **There is no TPMS reset procedure when re-inflating tires to the correct specification. Ensure tires are inflated to recommend pressure, and the TPMS indicator will go out shortly.**

NOTE: **If a flat tire is replaced with the spare tire, and the flat tire is stored in the cargo area, the low pressure indicator will stay on but the appropriate tire indicator will go off. This prevents the customer from thinking there is a problem with the spare tire. When the flat tire is taken out of the vehicle for repair, the TPMS indicator will come on because the system is no longer receiving the signal from the tire's transmitter.**

All four tire pressure sensor IDs must be memorized to the TPMS control unit whenever you do any of these actions

- Replace the TPMS control unit.
- Replace the tire pressure sensor
- Substitute a known-good wheel with tire pressure sensor

GETtheMANUALS.org

When doing a tire rotation, memorizing the sensors in not needed.

Memorizing The Tire Pressure Sensor IDs

NOTE: **For vehicles that use this procedure, a tire pressure sensor trigger tool is needed. As early as 2007 Honda started requiring the use, on some models, of the TPMS Trigger Tool ATEQ VT55 instead of the standard Sensor Initializer Tool AKS0620006 or Trigger Tool Bartec Wheelrite Tech 300-J-48714. Honda is not entirely clear on which models the VT55 only can be used. The models listed below have ID memorizing procedures that name the VT55 only. The procedures for all other models name the VT55 and one of the older type trigger tools, or just an older trigger tool. The VT55 can be used on all models with initiator-less TPM Systems.**

- **Crosstour, CR-V (2007-12), CR-Z, Fit (2009 & later): Only use the TPMS Trigger Tool ATEQ VT55**
- **All Other Models: Can use either TPMS Sensor Initializer Tool AKS0620006 or TPMS Trigger Tool Bartec Wheelrite Tech 300-J-48714**

NOTE: **To ensure the control unit memorizes the correct ID, the vehicle with the new sensor must be at least 10 ft (3 m) away from other vehicles that have tire pressure sensors.**

1. With the ignition switch in LOCK (0), connect the HDS to the data link connector (DLC) located under the driver's side of the dashboard.
2. Turn the ignition switch to ON (II)
3. Make sure the HDS communicates with the vehicle and the TPMS control unit. If it doesn't, troubleshoot the DLC circuit.
4. Select Sensor ID Learning from the mode menu on the HDS.
5. Follow HDS screen prompts to turn on the TPMS sensor initializer tool.

NOTE: **On the TPMS Sensor Initializer Tool (AKS0620006), verify that the power switch (B) is in the "Low" position. See Fig. 10. If the power switch is in the "High" position, more than one sensor or sensors on other vehicles may be activated. Make sure the power switch is in the "Low" position.**

GETtheMANUALS.org

Fig. 10: Identifying TPMS Sensor Initializer Tool (AKS0620006) & Power Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Hold the TPMS sensor initializer tool near one wheel, memorize the pressure sensor ID by following the screen prompts on the HDS. See **Fig. 11**.

NOTE:

- **If you turn the ignition switch to LOCK (0) before memorizing all four sensor IDs, the memorizing ID is cancelled.**
- **If more than one sensor ID is displayed on the HDS, verify that the power switch is in the "LOW" position, the vehicle has not been driven for 5 minutes, and there are no other vehicles within 10 ft (3 m).**
- **See the HDS Help menu for specific instructions.**

Fig. 11: Identifying TPMS Sensor Initializer Tool (AKS0620006) On Wheel (ATEQ VT55 & Tech 300-J-48714 Are Similar)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Repeat step 6 for each wheel until all four sensor IDs are memorized. When all four IDs are memorized, the low tire pressure indicator blinks
8. Turn the ignition switch to LOCK (0).

GETtheMANUALS.org

9. Disconnect the HDS from the DLC.
10. Test-drive the vehicle at 28 mph (45 km/h) or more for at least 1 minute.
11. Make sure the low tire pressure indicator does not blink.
12. Make sure the tires are inflated to the specified tire pressure listed on the doorjamb sticker.

TPMS RESET - PROCEDURE 2

NOTE: **When a tire pressure sensor is replaced, the sensor ID must be memorized by the TPMS control unit.**

NOTE: **If a flat tire is replaced with the spare tire, and the flat tire is stored in the cargo area, the low pressure indicator will stay on but the appropriate tire indicator will go off. This prevents the customer from thinking there is a problem with the spare tire. When the flat tire is taken out of the vehicle for repair, the TPMS indicator will come on because the system is no longer receiving the signal from the tire's transmitter.**

Memorizing a Sensor ID Automatically

After rotating the tires or replacing a tire pressure sensor, drive the vehicle for at least 40 seconds at a speed of 15 mph (24 km/h) or more, and all the sensor IDs will be memorized automatically.

NOTE: **When replacing the TPMS control unit, use the HDS to memorize IDs. After the IDs are memorized, reduce the pressure in all four tires to less than the appropriate specification, and check to see that the four tire indicators come on.**

Memorizing a Sensor ID with the HDS

NOTE: **To ensure the control unit memorizes the correct ID, the vehicle with the new sensor must be at least 3 m (10 ft) from any other TPMS pressure sensor not installed on that vehicle.**

The HDS can memorize the ID of a new tire pressure sensor or a previously memorized ID.

1. With the ignition switch OFF, connect the HDS to the data link connector (DLC) located under the left side of the dashboard.
2. Turn the ignition switch ON (II), and memorize the ID of the tire pressure sensor by following the screen prompts on the HDS.

NOTE:

- **See the HDS Help menu for specific instructions.**
- **When replacing the TPMS control unit, use the HDS to memorize IDs.**
- **After the IDs are memorized, reduce the pressure in all four tires to less than the appropriate specification, and check to see that the four**

GETtheMANUALS.org

tire indicators come on.an indirect TPMS that doesnt use tire pressure sensors mounted inside the tires. It uses the existing VSA wheel speed sensors to monitor and compare tire characteristics while driving.

TPMS RESET - PROCEDURE 3

This vehicle is equipped with an indirect TPMS that doesnt use tire pressure sensors mounted inside the tires. It uses the existing VSA wheel speed sensors to monitor and compare tire characteristics while driving.

TPMS calibration is required after performing any of the following actions:

- Adjusting tire pressures
- Rotating the tires
- Replacing the tire(s)
- Updating/replacing the VSA modulator-control unit

Calibration begins when TPMS switch is pressed or Calibration is selected through the Multi-information display (MID). The process finishes automatically as the customer drives the vehicle. This takes about 30 minutes of cumulative driving at 30 to 60 mph.

Calibration - Models Without Multi-Information Display (MID)

1. Make sure the tires are inflated to the specified tire pressure listed on the doorjamb label. Vehicle must be stopped with the transmission in neutral (M/T) or P or N (A/T, CVT).
2. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
3. Press the TPMS switch (lower dash, left of steering wheel) for 3 seconds.
4. When the calibration successfully begins, the TPMS indicator (instrument cluster, center left) blinks twice.
5. Calibration is completed after driving 31 to 62 mph (50 to 100 km/h), steadily without much acceleration or deceleration for about 30 minutes.

Calibration - Models With Multi-Information Display (MID)

1. Make sure the tires are inflated to the specified tire pressure listed on the doorjamb label. Vehicle must be stopped with the transmission in neutral (M/T) or P or N (A/T, CVT).
2. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
3. Use ARROW buttons (right side of steering wheel) to select VEHICLE SETTINGS, then press the SEL/RESET button. TPMS CALIBRATION appears on the display.
4. Press the SEL/RESET button. The display switches to the customization setup screen, where you can select CANCEL or CALIBRATE.
5. Use ARROW buttons to select CALIBRATE, then press the SEL/RESET button. CALIBRATION STARTED screen appears, then the display returns to the customization menu screen

GETtheMANUALS.org

NOTE: **If the CALIBRATION FAILED TO START message appears, repeat steps 4 and 5.**

6. Calibration is completed after driving 31 to 62 mph (50 to 100 km/h), steadily without much acceleration or deceleration for about 30 minutes.

TPMS RESET - PROCEDURE 4

NOTE: **Make sure the tire pressure is properly adjusted to the specified tire pressure listed on the doorjamb label before doing the TPMS calibration.**

Do the TPMS calibration after doing the following items:

- Adjust the tire pressure
- Rotating the tires
- Replacing the tire(s)
- Update/replace the VSA modulator-control unit

The calibration begins when the calibration is selected through the MID (multi-information display). The calibration is completed after driving in an ideal driving condition (28 to 65 mph (45 to 105 km/h), driving steadily without much acceleration or deceleration) for about 18 minutes. Full functionality of the system cannot be performed properly if the calibration is not completed.

1. Turn the ignition switch to ON (II), or the engine start/stop button is pressed to select the ON mode.

NOTE: **Vehicle must be stopped with the transmission in neutral (M/T) or P or N (A/T and CVT).**

2. Press the MENU button (left side of steering wheel) to enter the customizing mode.
3. Press the AUDIO REMOTE + or - button to select CUSTOMIZE SETTINGS > TPMS CALIBRATION > INITIALISE.
4. Press the AUDIO REMOTE + or - button to select YES.
5. When the calibration successfully begins, "TPMS CALIBRATION HAS BEEN INITIALIZED" gets displayed on MID when the system received the calibration.

NOTE: **If the calibration does not begin successfully, "UNABLE TO INITIALIZE TPMS CALIBRATION" gets displayed on MID. Troubleshoot the TPMS.**

GETtheMANUALS.org

LUBRICANTS AND FLUIDS

Application	Lubricant or Fluid
Engine	Honda Motor Oil: 0W-20 Look for the API certification seal on the oil container. Make sure it says "For Gasoline Engines." SAE Viscosity: See chart.
Automatic transmission	Honda Automatic Transmission Fluid (ATF DW-1) Always use Honda ATF DW-1. Using a non-Honda ATF can affect shift quality.
Rear differential (AWD models)	Honda Dual Pump Fluid II
Brake system (including VSA lines)	Honda DOT 3 Brake Fluid: Always use Honda DOT 3 Brake Fluid. Using a non-Honda brake fluid can cause corrosion and decrease the life of the system.
Cooling system	Always use Honda Long Life Antifreeze/Coolant Type 2 **NOTE:** **For prolonged cold temperatures below -22°F (-30°C), add Honda Extreme Cold Weather Antifreeze/Coolant Type 2 (concentrate)**

MAINTENANCE MINDER™ GENERAL INFORMATION

MAINTENANCE MINDER

The Maintenance Minder is an important feature of the information display. Based on engine and transmission operating conditions, and accumulated engine revolutions, the CR-V's onboard computer (PCM) calculates the remaining engine oil and the transmission fluid life. The system also displays the remaining engine oil life along with the code(s) for other scheduled maintenance items needing service.

Dashboard

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Steering Wheel

Fig. 5: Identifying Source/Enter Button, Audio Remote/Multi-Information Display Switch And Menu Button
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Service Information (information display)

1. The remaining engine oil life (A) is shown as a percentage on the information display. To see the current engine oil life, turn the ignition switch to ON (II), then push and release the SEL/RESET knob repeatedly until the engine oil life displays.

GETtheMANUALS.org

Fig. 6: Display - Remaining Engine Oil Life
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. When the ignition switch is ON (II), and the remaining engine oil life is 15 % to 6 %, the remaining engine oil life (A) and other scheduled maintenance item(s) needing service are displayed. The Maintenance Minder indicator (B) also comes on when the engine oil life is 15 % or less.

   To cancel the display and the indicator, press the SEL/RESET knob.

   - COMPLETE LIST OF MAINTENANCE MAIN ITEMS (C) .
   - **Complete list of maintenance sub items (D)** See **MAINTENANCE MINDER™ MAINTENANCE MAIN ITEMS** or **MAINTENANCE MINDER™ MAINTENANCE SUB ITEMS**.

Fig. 7: Display - Remaining Engine Oil Life, Maintenance Minder Indicator, Maintenance Main And Sub Items
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. When the ignition switch is ON (II), and the remaining engine oil life is 5 % to 1 %, the message "SERVICE" (A) is displayed along with engine oil life and the same maintenance item code(s).

GETtheMANUALS.org

Fig. 8: Display - Service Message
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. When the ignition switch is ON (II), and the remaining engine oil life is 0 %, the engine oil life indicator (A) blinks. Pressing the SEL/RESET knob cancels the display, but the Maintenance Minder indicator stays on.

Fig. 9: Display - Engine Oil Life Indicator
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. If the indicated maintenance is not done, the engine oil life indicator shows a negative distance traveled, for example "-10 miles" on the display.

   If the negative distance traveled is between 0 and -9, the indicator is displayed for only a few seconds when the ignition switch is turned to ON (II). The negative distance traveled (A) remains displayed after the vehicle is driven more than 10 miles (for USA models) or 10 km (for Canada models) after 0 % oil life is reached, and the display cannot be canceled.

   This means the indicated maintenance item(s) should have been done more than 10 miles (or 10 km) ago.

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

SERVICE INFORMATION (MULTI-INFORMATION DISPLAY)

Maintenance items, which should be serviced at the same time that you replace the engine oil (A), appear on the multi-information display. You can view them on the "Maintenance info" screen at any time.

How to access Maintenance Minder

1. Turn the ignition switch to ON (II).
2. Press the MENU button to go to the "Vehicle Menu" screen.
3. Select "Vehicle Information" with the Audio Remote/Multi-Information Display Switch, then press the Source/Enter Button.
4. Press the Source/Enter Button again to go to the "Maintenance info" screen. The maintenance item(s) appears on the Maintenance Minder.

Fig. 11: Display - Maintenance Info Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

RESETTING THE MAINTENANCE MINDER

NOTE:

- **The vehicle must be stopped to reset the Maintenance Minder.**
- **If a required service is done and the Maintenance Minder is not reset, or if the Maintenance Minder is reset without doing the service, the system will not show the proper maintenance timing. This can lead to serious mechanical problems because there will be no accurate record of when**

GETtheMANUALS.org

the required maintenance is needed.

- **The engine oil life and the maintenance item(s) can be independently reset with the HDS.**

INFORMATION DISPLAY

1. Turn the ignition switch to ON (II).
2. Push the SEL/RESET knob repeatedly until the engine oil life indicator is displayed.
3. Press and hold the SEL/RESET knob for about 10 seconds. The engine oil life indicator and the maintenance item code(s) will blink, then release the knob.

NOTE: **If you are resetting the Maintenance Minder when the engine oil life is more than 15 %, make sure any maintenance item(s) requiring service are done before resetting the display.**

4. Press and hold the SEL/RESET knob for another 5 seconds. The maintenance item code(s) will disappear, and the engine oil life will reset to "100 %."

Fig. 12: Display - Engine Oil Life Indicator Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

MULTI-INFORMATION DISPLAY

1. Turn the ignition switch to ON (II).
2. Refer to the **HOW TO ACCESS MAINTENANCE MINDER** procedure, and go to the "Maintenance info" screen, then displaying maintenance item(s).
3. Press the Source/Enter Button to change into maintenance item(s) reset mode.

NOTE:

- **If you are resetting the Maintenance Minder when the engine oil life is more than 15 %, make sure any maintenance item(s) requiring service are done before resetting the display.**
- **To cancel the reset mode, select "NO", then press the Source/Enter Button.**

GETtheMANUALS.org

Fig. 13: Display - Maintenance Info Reset Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. To reset the Maintenance Minder, select "YES" with the Audio Remote/Multi-Information Display Switch, then press the Source/Enter Button. The displayed maintenance items disappear, and the engine oil life display returns to "100 %." The display will return to the Maintenance Minder, and you will see any maintenance items that are necessary for your vehicle at the next maintenance service will appear.

Fig. 14: Display - Engine Oil Life Indicator Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

RESETTING INDIVIDUAL MAINTENANCE ITEM

1. **Connect the Honda Diagnostic System (HDS) to the data link connector (DLC)** See **MAINTENANCE MINDER™ MAINTENANCE MAIN ITEMS** or **MAINTENANCE MINDER™ MAINTENANCE SUB ITEMS**.
2. Turn the ignition switch to ON (II).
3. Make sure the HDS communicates with the vehicle and the powertrain control module (PCM). **If it does not communicate, troubleshoot the DLC circuit** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** .
4. Select GAUGES in the BODY ELECTRICAL with the HDS.
5. Select ADJUSTMENT in the GAUGES with the HDS.
6. Select MAINTENANCE MINDER in the ADJUSTMENT with the HDS.
7. Select RESET in the MAINTENANCE MINDER with the HDS.
8. Select the individual maintenance item you wish to reset with the HDS.

MAINTENANCE MINDER™ MAINTENANCE MAIN ITEMS

If the message "SERVICE" or "SERVICE DUE NOW" does not appear more than 12 months after the display is reset, change the engine oil every year.

GETtheMANUALS.org

NOTE:

- **Inspect idle speed every 160, 000 miles (256, 000 km).**
- **Adjust the valves during services A, B, 1, 2, or 3 if they are noisy.**
- **Replace the brake fluid every 3 years (independent of the maintenance messages in the information display).**

Symbol	Maintenance Main Items
A	**REPLACE ENGINE OIL** ○ Engine oil capacity without oil filter: 3.8 L (4.0 US qt)
B	REPLACE ENGINE OIL AND OIL FILTER ○ Engine oil capacity with oil filter: 4.0 L (4.2 US qt)
	CHECK FRONT AND REAR BRAKES • Check brake pads and disc thickness. Check for damage. • Check calipers for damage, leaks, and tightness. • Check parking brake linings for cracking, glazing, wear, and for oil or grease contamination.
	CHECK PARKING BRAKE ADJUSTMENT ○ Check number of clicks (5 to 6) when parking brake pedal is pressed with 294 N (30.0 kgf, 66.1 lbf) of force.
	Inspect tie-rod ends, steering gearbox, and gearbox boots See **PARKING BRAKE INSPECTION** or **PARKING BRAKE INSPECTION AND ADJUSTMENT** • Check steering linkage. • Check boots for damage and leaking grease.
	INSPECT SUSPENSION COMPONENTS • Check bolts for tightness. • Check condition of ball joint boots for deterioration and damage.
	INSPECT DRIVESHAFT BOOTS ○ Check boots for cracks and boot bands for tightness.
	INSPECT BRAKE HOSES AND LINES INCLUDING VSA LINES ○ Check master cylinder and VSA modulator-control unit for damage or leakage.
	Inspect all fluid levels and condition of fluids • **ENGINE COOLANT** • AUTOMATIC TRANSMISSION FLUID • **Rear Differential Fluid Inspection** • **BRAKE FLUID**

GETtheMANUALS.org

	• Windshield washer fluid
	INSPECT EXHAUST SYSTEM * ○ Check catalytic converter heat shields, exhaust pipes, and mufflers for damaged, leaks, and tightness.
	INSPECT FUEL LINES and CONNECTIONS * ○ Check for loose connections, cracks, and deterioration; retighten loose connections and replace damaged parts.

NOTE: **According to state and federal regulations, failure to do the maintenance items marked with an asterisk (*) will not void the customer's emissions warranties. However, Honda recommends that all maintenance services be done at the recommended interval, to ensure long-term reliability.**

MAINTENANCE MINDER™ MAINTENANCE SUB ITEMS

Number	Maintenance Sub Items
1	Rotate tires, and check tire inflation and condition ○ Follow the pattern shown in the Owner's Manual.
2	REPLACE AIR CLEANER ELEMENT ○ If the vehicle is driven primarily in dusty conditions, replace every 15, 000 miles (24, 000 km).
	REPLACE DUST AND POLLEN FILTER ○ If the vehicle is driven mostly in areas that have high concentrations of dust, pollen, or soot in the air, replace every 15, 000 miles (24, 000 km). ○ Replace filter whenever airflow from the heating and air conditioning system is less than normal.
	INSPECT DRIVE BELT ○ Look for cracks and damage, then check the position of drive belt auto-tensioner indicator.
3	**REPLACE AUTOMATIC TRANSMISSION FLUID** • Use Honda ATF DW-1. • Automatic transmission fluid capacity: ○ 2WD models: 2.2 L (2.3 US qt) ○ AWD models: 2.6 L (2.7 US qt) • If you tow a CR-V behind a motor home, transmission fluid must be changed every 2 years or 30, 000 miles (48, 000 km), whichever comes first.

GETtheMANUALS.org

4	**REPLACE SPARK PLUGS** ○ Use ILZKR7B-11S (NGK) or SXU22HCR11S (DENSO).
	INSPECT VALVE CLEARANCE (COLD) • Intake: 0.21-0.25 mm (0.009-0.009 in) • Exhaust: 0.25-0.29 mm (0.010-0.011 in)
5	**Replace engine coolant** See VALVE CLEARANCE ADJUSTMENT or VALVE, SPRING, AND VALVE SEAL REMOVAL AND INSTALLATION • Use Honda Long Life Antifreeze/Coolant Type 2, and if necessary, add Honda Extreme Cold Weather Antifreeze/Coolant Type 2 (concentrate) as need for prolong cold temperatures below -22°F (-30°C). • Capacity (including reservoir): 6.23 L (1.646 US gal)
6	REPLACE REAR DIFFERENTIAL FLUID (AWD MODELS) • Use Honda Dual Pump Fluid II. • Capacity: 1.2 L (1.3 US qt)

TEST

1. Power Mirror Actuator - Test
    1. Disconnect the connector.
    2. Check actuator operation by connecting power and ground according to the table.
    3. If the mirror fails to work properly, the power mirror actuator is faulty; replace the power mirror.

    Defogger Test

    4. Check for continuity between power mirror connector terminals No. 4 and No. 12. There should be continuity. If the resistance is not as specified, check for an open or high resistance in the wire between the connector and mirror holder. If the wire is OK, replace the mirror holder.

REARVIEW MIRROR HARNESS COVER BASE REMOVAL AND

GETtheMANUALS.org

INSTALLATION

REMOVAL

1. Rearview Mirror (Auto Diming Type)
    1. Carefully pry out the rearview mirror harness cover (A) to release the hooks (B), then slide the cover rearward.
    2. Release the rearview mirror harness cover from the hooks (C) of the rearview mirror harness cover base (D).

Fig. 54: Rearview Mirror Harness Cover Base, Hooks And Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect the rearview mirror harness connector (A).

Fig. 55: Identifying Rearview Mirror Harness Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Loosen the screw (A) with a TORX T20 bit, then slide the rearview mirror (B) rearward and off the mount (C).

GETtheMANUALS.org

Fig. 56: Rearview Mirror, Mount, Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Rearview Mirror Harness Cover Base
    1. Carefully cut through the adhesive tape under the rearview mirror harness cover base (A) using a piano wire, then remove the base.
    2. Use a putty knife to scrape off of the old adhesive tape from the windshield. Clean the bonding surface with a shop towel dampened with isopropyl alcohol. After cleaning, keep oil, grease and water from getting on the clean surface.
    3. If the original rearview mirror harness cover base will be installed, use a putty knife to scrape off all of the old adhesive tape from the base. Clean the base surface with a shop towel dampened with isopropyl alcohol. After cleaning, keep oil, grease and water from getting on the clean surface. Apply primer to the area where the new double-sided adhesive tape will be applied to the base, and attach the adhesive tape to the base.

       Adhesive tape: Thickness 0.8 mm (0.031 in)

       Width 7 mm (0.28 in)

GETtheMANUALS.org

Fig. 57: Identifying Rearview Mirror Harness Cover Base
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Rearview Mirror Harness Cover Base
    1. Before installing the rearview mirror harness cover base, apply primer to the area where the harness cover base will be installed to the inside face of the windshield. Let the primer dry at least 10 minutes, then attach it to the windshield within 12 hours.

Fig. 58: Identifying Applying Area On Rearview Mirror Harness Cover Base
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Attach the rearview mirror harness cover base (A) with the adhesive tape (B) to the inside face of the windshield as shown, then press the adhesive portions into place securely.

GETtheMANUALS.org

GETtheMANUALS.org

Fig. 65: Identifying Rearview Mirror Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Loosen the screw (A) with a TORX T20 bit, then slide the rearview mirror (B) rearward and off the mount (C).

Fig. 66: Identifying Rearview Mirror, Mount And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Rearview Mirror

Without auto dimming mirror

1. Fit the mirror base (A) over the mount (B), and secure the rearview mirror.

GETtheMANUALS.org

Fig. 67: Identifying Rearview Mirror, Mount And Screw (Without Auto Diming Mirror)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

With auto dimming mirror

1. Slide the rearview mirror (A) forward to the mount (B), then tighten the screw (C) with the TORX T20 bit.

NOTE: **Before installing the mirror, remove the screw, and apply medium strength liquid thread lock to it.**

Fig. 68: Identifying Rearview Mirror, Mount And Screw (With Auto Diming Mirror) With torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Connect the rearview mirror connector (A).

GETtheMANUALS.org

Fig. 69: Identifying Rearview Mirror Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the rearview mirror harness cover (A). Make sure the hooks (B, C) snap into place securely.

Fig. 70: Identifying Rearview Mirror Harness Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

VANITY MIRROR LIGHT TEST

REMOVAL

1. Sunvisor
    1. Push the tab (A) with a flat-tip screwdriver through the hole in the front side of the bracket cover (B).

NOTE: Make sure the tab is unlocked.

GETtheMANUALS.org

Fig. 71: Pushing Tab Using Flat-Tip Screwdriver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. While pushing in the tab (A) with a flat-tip screwdriver, release the sunvisor (B) from the holder (C), and rotate the sunvisor backward 45 °.

NOTE: **Make sure the tab slides into the bracket cover as you rotate the sunvisor.**

Fig. 72: Rotating Sunvisor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect the connector (A), then remove the sunvisor (B).

GETtheMANUALS.org

NOTE: **If the sunvisor cannot be removed, the tab has not rotated into the bracket cover. Repeat step 2 to rotate the tab.**

Fig. 73: Identifying Connector And Sunvisor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TEST

1. Vanity Mirror Light - Test

NOTE: **When doing the vanity mirror light test, install the bulb correctly.**

1. Check for continuity between the terminals in each vanity mirror cover (A) position according to the table.
2. If the continuity is not as specified, carefully pry off the lens (B), and replace the bulb or the sunvisor.

GETtheMANUALS.org

Fig. 74: Identifying Vanity Mirror Cover And Lens
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Terminal / Position	1		2
Open	○	⊗	○
Closed			

Fig. 75: Continuity Reference Chart
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Sunvisor
    1. Connect the connector (A), and install the sunvisor (B).

GETtheMANUALS.org

Fig. 76: Identifying Connector And Sunvisor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. While holding the bracket cover (A), rotate the sunvisor (B) forward until the tab (C) snaps into place.
3. Gently pull down on the sunvisor to make sure it is properly secured in the body.
4. Rotate the sunvisor into the holder (D).

Fig. 77: Rotating Sunvisor Into Holder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

AUTOMATIC DIMMING INSIDE MIRROR TEST

1. Turn the ignition switch to ON (II).
2. Measure the voltage between terminal No. 6 and body ground.
    - If there is less than 0.2 V, go to step 3.

GETtheMANUALS.org

- If there is more than 0.2 V, check for:
  - Poor ground (G501).
  - An open or high resistance in the ground wire.

Fig. 78: Identifying Automatic Dimming Inside Mirror 7P Connectors Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Measure the voltage between terminal No. 7 and body ground.
   - If there is battery voltage, go to step 4.
   - If there is no voltage, check for:
     - Blown No. B6 (7.5 A) fuse in the under-dash fuse/relay box.
     - An open or high resistance in the ground wire.
4. Measure the voltage between terminal No. 5 and body ground with the transmission range switch in R position.
   - If there is battery voltage, **REPLACE THE MIRROR ASSEMBLY**.
   - If there is no voltage, check for:
     - Blown No. B5 (10 A) fuse in the under-dash fuse/relay box.
     - Faulty MICU.
     - Faulty transmission range switch.
     - An open or high resistance in the wire.

POWER MIRROR FUNCTION TEST

1. Remove the power mirror switch and disconnect 13P connector from it.

GETtheMANUALS.org

Fig. 79: Identifying Power Mirror Switch 13P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Choose the appropriate test based on the symptom:
   - Both mirrors do not work, go to step 3.
   - Left mirror does not work, go to step 5.
   - Right mirror does not work, go to step 6.
   - Mirror defoggers do not work, go to step 7.

Both Mirrors

3. Measure the voltage between terminal No. 4 and body ground with the ignition switch ON (II). There should be battery voltage.
   - If there is no battery voltage, check for:
     - Blown No. B22 (7.5 A) fuse in the under-dash fuse/relay box.
     - An open or high resistance in the PNK wire.
   - If there is battery voltage, go to step 4.
4. Check for continuity between terminal No. 13 and body ground.
   - If there is no continuity, check for:
     - An open or high resistance in the BLK wire.
     - Poor ground (G501).
   - If there is continuity, check both mirrors individually.

Left Mirror

5. Connect terminals No. 4 and No. 9, and terminals No. 1 (or No. 7) and No. 13 with jumper wires, and turn the ignition switch to ON (II).

   The left mirror should tilt down (or swing left).

   - If the left mirror does not tilt down (or does not swing left), check for an open or high resistance in the ORN (or GRY) wire between the left mirror and the 13P connector.

GETtheMANUALS.org

If the wire is OK, **CHECK THE LEFT MIRROR ACTUATOR**.

- If the mirror neither tilts down nor swings left, repair the PUR wire.
- If the mirror works properly, **CHECK THE MIRROR SWITCH**.

Right Mirror

6. Connect terminals No. 4 and No. 8, and terminals No. 1 (or No. 6) and No. 13 with jumper wires, and turn the ignition switch to ON (II). The right mirror should tilt down (or swing left).
   - If the mirror does not tilt down (or does not swing left), check for an open or high resistance in the ORN or PUR (or BLU) wire between the right mirror and the 13P connector. If the wire is OK, **CHECK THE RIGHT MIRROR ACTUATOR**.
   - If the mirror neither tilts down nor swings left, repair the WHT wire.
   - If the mirror works properly, **CHECK THE MIRROR SWITCH**.

Defogger

7. Remove the rear window defogger relay from the under-hood fuse/relay box, then connect rear window defogger relay terminals No. 1 and No. 2 in the under-hood fuse/relay box with a jumper wire. Measure the voltage between terminal No. 4 of the mirror connector and body ground. There should be battery voltage and both mirrors should warm up.
   - If there is no voltage or neither mirror warms up, check for:
     - An open or high resistance in the ORN wire.
     - Blown No. A10 (7.5 A) fuse in the under-hood fuse/relay box.
     - Blown No. B22 (7.5 A) fuse in the under-dash fuse/relay box.
   - If one fails to warm up, check for:
     - Faulty defogger.
     - Poor ground (G501, G503).
   - If both warm up, check for:
     - Faulty rear window defogger relay.
     - Faulty climate control unit or HVAC control unit.

DTC U0029: F-CAN MALFUNCTION (BUS-OFF (PCM))

Fig. 1: DTC Troubleshooting Chart (U0029)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
U0029 F-CAN MALFUNCTION (BUS-OFF (PCM))			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 3. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
U0029 F-CAN MALFUNCTION (BUS-OFF			

GETtheMANUALS.org

(PCM))			

Is DTC U0029 indicated?

YES : The failure is duplicated. **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM UPDATE** or **PCM REMOVAL AND INSTALLATION** , then **do the repair verification** .

NO : Intermittent failure, the system is OK at this time.

REPAIR VERIFICATION

- Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
U0029 F-CAN MALFUNCTION (BUS-OFF (PCM))			

Is DTC U0029 indicated?

YES : If the PCM was updated, **substitute a known-good PCM** See **PCM UPDATE** or **PCM REMOVAL AND INSTALLATION** , then recheck. If the PCM was substituted, go to step 1.

NO : If the PCM was updated, troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM UPDATE** or **PCM REMOVAL AND INSTALLATION** . If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

DTC U0029: F-CAN COMMUNICATION LINE ERROR

Fig. 2: DTC Troubleshooting Chart (U0029)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC Description	DTC
U0029 F-CAN Communication Line Error	

1. Problem verification:

GETtheMANUALS.org

- 1. Clear the DTCs with the HDS.
- 2. Turn the ignition switch to LOCK (0) and then back to ON (II).
- 3. Wait for at least 6 seconds.
- 4. Check for DTCs with the HDS.

DTC Description	DTC
U0029 F-CAN Communication Line Error	

Is DTC U0029 indicated?

YES : **GO TO DLC CIRCUIT TROUBLESHOOTING** .

NO : Intermittent failure, the system is OK at this time.

DTC U0100: GAUGE CONTROL MODULE LOST COMMUNICATION WITH PCM

Fig. 3: DTC Troubleshooting Chart (U0100)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC Description	DTC
U0100 Gauge Control Module Lost Communication With PCM	

NOTE:

- **If you have any loss of communication DTCs for the PCM, troubleshoot those DTCs first.**
- **If you are troubleshooting multiple DTCs, be sure to follow the instructions in B-CAN System Diagnosis Test Mode A.**

GETtheMANUALS.org

1. Problem verification:
    - 1. Clear the DTCs with the HDS.
    - 2. Turn the ignition switch to LOCK (0) and then back to ON (II).
    - 3. Wait for at least 6 seconds.
    - 4. Check for DTCs with the HDS.

DTC Description	DTC
U0100 Gauge Control Module Lost Communication With PCM	

Is DTC U0100 indicated?

YES : Go to step 2.

NO : Intermittent failure, the system is OK at this time. Check for loose or poor connections.

2. Open wire check (F CAN lines):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Jump the SCS line with the HDS.
    - 3. Disconnect the following connectors.

      PCM connector A (49P)

      Gauge control module 32P connector

    - 4. Check for continuity between test points 1 and 2 respectively.

      Test condition IG LOCK (0)

      PCM connector A (49P): disconnected

      Gauge control module 32P connector: disconnected

      Test circuit F CAN-H

      Test point 1 Gauge control module 32P connector No. 19 (WHT)

      Test point 2 PCM connector A (49P) No. 3 (WHT)

      Test circuit F CAN-L

      Test point 1 Gauge control module 32P connector No. 20 (RED)

      Test point 2 PCM connector A (49P) No. 4 (RED)

GETtheMANUALS.org

Fig. 4: Checking Continuity Between Gauge Control Module 32P Connector And PCM Connector A (49P) Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The F CAN wires are OK. **Replace the gauge control module** See **Rewriting the ODO Data and Transferring the Maintenance Minder™ Data to a New Gauge Control Module** or **GAUGE CONTROL MODULE REMOVAL AND INSTALLATION** .

NO : An open or poor connection in the F CAN wires between the PCM and the gauge control module.

DTC U0100-00: F-CAN MALFUNCTION (LOST COMMUNICATION WITH POWERTRAIN CONTROL MODULE (PCM)); DTC U0101-00: F-CAN MALFUNCTION (LOST COMMUNICATION WITH A/T CONTROL SYSTEM); DTC U0122-00: F-CAN MALFUNCTION (LOST COMMUNICATION WITH VSA MODULATOR-CONTROL UNIT); DTC U0126-00: F-CAN MALFUNCTION (LOST COMMUNICATION WITH STEERING ANGLE SENSOR)

GETtheMANUALS.org

Fig. 7: Checking Continuity Between Real Time AWD Control Unit 24P Connector And VSA Modulator-Control Unit 38P Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : **Update the VSA modulator-control unit if it does not have the latest software** See **VSA SENSOR NEUTRAL POSITION MEMORIZATION** , **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION** or **VSA MODULATOR-CONTROL UNIT UPDATE** , and recheck. If the symptom/indication goes away with the updated VSA modulator-control unit, troubleshooting is complete. If the symptom/indication goes away with the updated the VSA modulator-control unit, **replace the original VSA modulator-control unit** See **VSA SENSOR NEUTRAL POSITION MEMORIZATION** , **VSA MODULATOR-CONTROL UNIT UPDATE** or **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION** .

NO : Repair an open in the F CAN-H and/or F CAN-L wires between the real time AWD control unit and the VSA modulator-control unit.

4. Open wire check (F CAN-H, F CAN-L lines):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connectors.

     Real time AWD control unit 24P connector

     Steering angle sensor 4P connector

GETtheMANUALS.org

- 3. Check for continuity between test points 1 and 2.

  Test condition IG LOCK (0)

  Real time AWD control unit 24P connector: disconnected

  Steering angle sensor 4P connector: disconnected

  Test circuit F CAN-H

  Test point 1 Real time AWD control unit 24P connector No. 14 (WHT)

  Test point 2 Steering angle sensor 4P connector No. 2 (WHT)

  Test circuit F CAN-L

  Test point 1 Real time AWD control unit 24P connector No. 24 (RED)

  Test point 2 Steering angle sensor 4P connector No. 3 (RED)

<u>Fig. 8: Checking Continuity Between Real Time AWD Control Unit 24P Connector And Steering Angle Sensor 4P Connector Terminals</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : **<u>REPLACE THE STEERING ANGLE SENSOR</u>** .

GETtheMANUALS.org

NO : Repair an open in the F CAN-H and/or F CAN-L wires between the real time AWD control unit and the steering angle sensor.

DTC U0114: F-CAN MALFUNCTION (PCM-AWD CONTROL UNIT)

Fig. 9: DTC Troubleshooting Chart (U0114)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
U0114 F-CAN MALFUNCTION (AWD CONTROL UNIT-PCM)			

1. DTC check:
   - 1. Turn the ignition switch to ON (II).
   - 2. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
U0029 F-CAN MALFUNCTION (BUS-OFF(PCM))			
U0114 F-CAN MALFUNCTION (AWD CONTROL UNIT-PCM)			

Are DTC U0029 and U0114 indicated at the same time?

YES : **DO THE TROUBLESHOOTING FOR DTC U0029**.

NO : Go to step 2.

2. Problem verification:
   - 1. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 2. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
U0114 F-CAN MALFUNCTION (AWD CONTROL UNIT-PCM)			

Is DTC U0114 indicated?

YES : The failure is duplicated. Go to step 3.

NO : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the real time AWD control unit and the PCM.

3. Real time AWD system check:

GETtheMANUALS.org

- 1. Check for communication to the Real time AWD system with the HDS.

Does the HDS communicate with the real time AWD control unit?

YES : Go to step 4.

NO : Go to the real time AWD symptom troubleshooting for HDS does not communicate.

4. Open wire check (F CAN-H line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connectors.

     PCM connector A (49P)

     Real time AWD control unit 24P connector

   - 4. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     PCM connector A (49P): disconnected

     Real time AWD control unit 24P connector: disconnected

     Test circuit F CAN-H

     Test point 1 PCM connector A (49P) No. 3 (WHT)

     Test point 2 Real time AWD control unit 24P connector No. 14 (WHT)

GETtheMANUALS.org

Fig. 10: Checking Continuity Between PCM Connector A (49P) No. 3 And Real Time AWD Control Unit 24P Connector No. 14 Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The F CAN-H wire is OK. Go to step 5.

NO : Repair an open in the F CAN-H wire between the PCM (A3) and the real time AWD control unit, then **do the repair verification** .

5. Open wire check (F CAN-L line):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     PCM connector A (49P): disconnected

     Real time AWD control unit 24P connector: disconnected

     Test circuit F CAN-L

     Test point 1 PCM connector A (49P) No. 4 (RED)

     Test point 2 Real time AWD control unit 24P connector No. 24 (RED)

GETtheMANUALS.org

Fig. 11: Checking Continuity Between PCM Connector A (49P) No. 4 And Real Time AWD Control Unit 24P Connector No. 24 Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The F CAN-L wire is OK. **Update the real time AWD control unit** See **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION** , **VSA MODULATOR-CONTROL UNIT UPDATE** or **VSA SENSOR NEUTRAL POSITION MEMORIZATION** if it does not have the latest software, then **do the repair verification** . If DTC U0114 is indicated after updated, **replace the original real time AWD control unit** See **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION** , **VSA MODULATOR-CONTROL UNIT UPDATE** or **VSA SENSOR NEUTRAL POSITION MEMORIZATION** , then **do the repair verification** .

NO : Repair an open in the F CAN-L wire between the PCM (A4) and the real time AWD control unit, then **do the repair verification** .

REPAIR VERIFICATION

- Turn the ignition switch to LOCK (0).
- Reconnect all connectors.
- Turn the ignition switch to ON (II).
- **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** or **HOW TO TROUBLESHOOT THE A/T SYSTEM** .
- **DO THE PCM IDLE LEARN PROCEDURE** .
- Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame

GETtheMANUALS.org

U0114 F-CAN MALFUNCTION (AWD CONTROL UNIT-PCM)			

Is DTC U0114 indicated?

YES : Check for poor connections or loose terminals at the real time AWD control unit and the PCM then go to step 1.

NO : Troubleshooting is complete. If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

DTC U0114: GAUGE CONTROL MODULE LOST COMMUNICATION WITH REAL TIME AWD CONTROL UNIT

Fig. 12: DTC Troubleshooting Chart (U0114)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

DTC Description	DTC
U0114 Gauge Control Module Lost Communication With Real Time AWD Control Unit	

NOTE:

- **If you have any loss of communication DTCs for the PCM, troubleshoot those DTCs first.**
- **If you are troubleshooting multiple DTCs, be sure to follow the instructions in B-CAN System Diagnosis Test Mode A.**

1. Problem verification:
   - 1. Clear the DTCs with the HDS.
   - 2. Turn the ignition switch to LOCK (0) and then back to ON (II).
   - 3. Wait for at least 6 seconds.
   - 4. Check for DTCs with the HDS.

DTC Description	DTC
U0114 Gauge Control Module Lost Communication With Real Time AWD Control Unit	

Is DTC U0114 indicated?

YES : Go to step 2.

NO : Intermittent failure, the system is OK at this time. Check for loose or poor connections.

2. Fuse check:
   - 1. Check the following fuse.

     Fuse No. B6 (7.5 A)

     Location Under-dash fuse/relay box

Is the fuse OK?

YES : Go to step 3.

NO : Replace the fuse. If the fuse blows again, repair a short to ground in the No. B6 (7.5 A) fuse circuit.

3. Open wire check (IG1 P/W line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Real time AWD control unit 24P connector

   - 3. Turn the ignition switch to ON (II).

GETtheMANUALS.org

- 4. Measure the voltage between test points 1 and 2.

  Test condition IG ON (II)

  Real time AWD control unit 24P connector: disconnected

  Test circuit IG1 P/W

  Test point 1 Real time AWD control unit 24P connector No. 12 (RED)

  Test point 2 Body ground

Fig. 13: Measuring Voltage Between Real Time AWD Control Unit 24P Connector No. 12 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The IG1 P/W wire is OK. Go to step 4.

NO : Repair an open or high resistance in the wire.

4. Open wire check (GND lines):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Real time AWD control unit 24P connector: disconnected

     Test circuit GND

     Test point 1 Real time AWD control unit 24P connector No. 4 (BLK)

     Test point 2 Body ground

GETtheMANUALS.org

Test circuit GND

Test point 1 Real time AWD control unit 24P connector No. 8 (BLK)

Test point 2 Body ground

Fig. 14: Checking Continuity Between Real Time AWD Control Unit 24P Connector No. 4, 8 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The GND wires are OK. Go to step 5.

NO : Repair an open or high resistance in the ground wire or poor ground (G603).

5. Open wire check (F CAN lines):
   - 1. Disconnect the following connector.

     Gauge control module 32P connector

   - 2. Check for continuity between test points 1 and 2 respectively.

     Test condition IG LOCK (0)

     Real time AWD control unit 24P connector: disconnected

     Gauge control module 32P connector: disconnected

     Test circuit F CAN-H

     Test point 1 Real time AWD control unit 24P connector No. 14 (WHT)

     Test point 2 Gauge control module 32P connector No. 19 (WHT)

     Test circuit F CAN-L

GETtheMANUALS.org

Test point 1 Real time AWD control unit 24P connector No. 24 (RED)

Test point 2 Gauge control module 32P connector No. 20 (RED)

Fig. 15: Checking Continuity Between Real Time AWD Control Unit 24P Connector And Gauge Control Module 32P Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The F CAN wires are OK. **Replace the gauge control module** See **Rewriting the ODO Data and Transferring the Maintenance Minder™ Data to a New Gauge Control Module** or **GAUGE CONTROL MODULE REMOVAL AND INSTALLATION** .

NO : An open or poor connection in the F CAN wires between the real time AWD control unit and the gauge control module.

DTC U0122: F-CAN MALFUNCTION (PCM-VSA MODULATOR-CONTROL UNIT)

GETtheMANUALS.org

DTC Troubleshooting: U0122

Fig. 16: DTC Troubleshooting Chart (U0122)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

GETtheMANUALS.org

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
U0122 F-CAN MALFUNCTION (PCM-VSA MODULATOR CONTROL UNIT)			

1. DTC check:
   - 1. Turn the ignition switch to ON (II).
   - 2. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
U0029 F-CAN MALFUNCTION (BUS-OFF(PCM))			
U0122 F-CAN MALFUNCTION (PCM-VSA MODULATOR CONTROL UNIT)			

Are DTC U0029 and U0122 indicated at the same time?

YES : **DO THE TROUBLESHOOTING FOR DTC U0029**.

NO : Go to step 2.

2. Problem verification:
   - 1. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** or **HOW TO TROUBLESHOOT THE A/T SYSTEM** .
   - 2. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
U0122 F-CAN MALFUNCTION (PCM-VSA MODULATOR CONTROL UNIT)			

Is DTC U0122 indicated?

YES : The failure is duplicated. Go to step 3.

NO : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the VSA modulator-control unit and the PCM.

3. VSA system check:
   - 1. Check for communication to the VSA system with the HDS.

Does the HDS communicate with the VSA modulator-control unit?

YES : Go to step 4.

GETtheMANUALS.org

NO : **GO TO THE SYMPTOM TROUBLESHOOTING FOR ABS INDICATOR, BRAKE SYSTEM INDICATOR, AND VSA INDICATOR DO NOT GO OFF** .

4. Open wire check (F CAN-H line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connectors.

     PCM connector A (49P)

     VSA modulator-control unit 38P connector

   - 4. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     PCM connector A (49P): disconnected

     VSA modulator-control unit 38P connector: disconnected

     Test circuit F CAN-H

     Test point 1 PCM connector A (49P) No. 3 (WHT)

     Test point 2 VSA modulator-control unit 38P connector No. 38 (WHT)

Fig. 17: Checking Continuity Between PCM Connector A (49P) No. 3 And VSA Modulator-Control Unit 38P Connector No. 38 Terminals

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The F CAN-H wire is OK. Go to step 5.

NO : Repair an open in the F CAN-H wire between the PCM (A3) and the VSA modulator-control unit, then **do the repair verification** .

5. Open wire check (F CAN-L line):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     PCM connector A (49P): disconnected

     VSA modulator-control unit 38P connector: disconnected

     Test circuit F CAN-L

     Test point 1 PCM connector A (49P) No. 4 (RED)

     Test point 2 VSA modulator-control unit 38P connector No. 26 (RED)

Fig. 18: Checking Continuity Between PCM Connector A (49P) No. 4 And VSA Modulator-Control Unit 38P Connector No. 26 Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

Is there continuity?

YES : The F CAN-L wire is OK. **Update the VSA modulator-control unit** See **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION** , **VSA MODULATOR-CONTROL UNIT UPDATE** or **VSA SENSOR NEUTRAL POSITION MEMORIZATION** if it does not have the latest software, then **do the repair verification** . If DTC U0122 is indicated after updated, **replace the VSA modulator-control unit** See **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION** , **VSA MODULATOR-CONTROL UNIT UPDATE** or **VSA SENSOR NEUTRAL POSITION MEMORIZATION** , then **do the repair verification** .

NO : Repair an open in the F CAN-L wire between the PCM (A4) and the VSA modulator-control unit, then **do the repair verification** .

REPAIR VERIFICATION

- Turn the ignition switch to LOCK (0).
- Reconnect all connectors.
- Turn the ignition switch to ON (II).
- **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- **DO THE PCM IDLE LEARN PROCEDURE** .
- Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
U0122 F-CAN MALFUNCTION (PCM-VSA MODULATOR CONTROL UNIT)			

Is DTC U0122 indicated?

YES : Check for poor connections or loose terminals at the VSA modulator-control unit and the PCM then go to step 1.

NO : Troubleshooting is complete. If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

DTC U0122: GAUGE CONTROL MODULE LOST COMMUNICATION WITH VSA MODULATOR-CONTROL UNIT (VSA MESSAGE)

GETtheMANUALS.org

DTC Troubleshooting: U0122

Fig. 19: DTC Troubleshooting Chart (U0122)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC Description	DTC
U0122 Gauge Control Module Lost Communication With VSA Modulator- Control Unit (VSA Message)	

NOTE:

- **If you have any loss of communication DTCs for the PCM, troubleshoot those DTCs first.**
- **If you are troubleshooting multiple DTCs, be sure to follow the instructions in B-CAN System Diagnosis Test Mode A.**

GETtheMANUALS.org

1. Problem verification:
   - 1. Clear the DTCs with the HDS.
   - 2. Turn the ignition switch to LOCK (0) and then back to ON (II).
   - 3. Wait for at least 6 seconds.
   - 4. Check for DTCs with the HDS.

DTC Description	DTC
U0122 Gauge Control Module Lost Communication With VSA Modulator- Control Unit (VSA Message)	

Is DTC U0122 indicated?

YES : Go to step 2.

NO : Intermittent failure, the system is OK at this time. Check for loose or poor connections.

2. Fuse check:
   - 1. Check the following fuses.

     Fuse No. A1-4 (20 A)

     Location Under-hood fuse/relay box

     Fuse No. B24 (7.5 A)

     Location Under-dash fuse/relay box

Is each fuse OK?

YES : Go to step 3.

NO : Replace the fuse. If the fuse blows again, repair a short to ground in the No. A1-4 (20 A) and/or No. B24 (7.5 A) fuse circuit(s).

3. Open wire check (+B ABS/VSA FSR line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     VSA modulator-control unit 38P connector

   - 3. Measure the voltage between test points 1 and 2.

     Test condition IG LOCK (0)

     VSA modulator-control unit 38P connector: disconnected

GETtheMANUALS.org

Test circuit +B ABS/VSA FSR

Test point 1 VSA modulator control unit 38P connector No. 4 (WHT)

Test point 2 Body ground

Fig. 20: Measuring Voltage Between VSA Modulator Control Unit 38P Connector No. 4 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The +B ABS/VSA FSR wire is OK. Go to step 4.

NO : Repair an open or high resistance in the wire.

4. Open wire check (IG1 VSA/ABS line):
   - 1. Turn the ignition switch to ON (II).
   - 2. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     VSA modulator-control unit 38P connector: disconnected

     Test circuit IG1 VSA/ABS

     Test point 1 VSA modulator-control unit 38P connector No. 36 (PUR)

     Test point 2 Body ground

GETtheMANUALS.org

Fig. 21: Measuring Voltage Between VSA Modulator-Control Unit 38P Connector No. 36 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The IG1 VSA/ABS wire is OK. Go to step 5.

NO : Repair an open or high resistance in the wire.

5. Open wire check (GND lines):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check for continuity between test points 1 and 2.

   Test condition IG LOCK (0)

   VSA modulator-control unit 38P connector: disconnected

   Test circuit GND

   Test point 1 VSA modulator control unit 38P connector No. 1 (BLK)

   Test point 2 Body ground

   Test circuit GND

   Test point 1 VSA modulator control unit 38P connector No. 3 (BLK)

   Test point 2 Body ground

GETtheMANUALS.org

Fig. 22: Checking Continuity Between VSA Modulator Control Unit 38P Connector No. 1, 3 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The GND wires are OK. Go to step 6.

NO : Repair an open or high resistance in the ground wire or poor ground (G201).

6. Open wire check (F CAN lines):
   - 1. Disconnect the following connector.

     Gauge control module 32P connector

   - 2. Check for continuity between test points 1 and 2 respectively.

     Test condition IG LOCK (0)

     VSA modulator-control unit 38P connector: disconnected

     Gauge control module 32P connector: disconnected

     Test circuit F CAN-H

     Test point 1 Gauge control module 32P connector No. 19 (WHT)

     Test point 2 VSA modulator-control unit 38P connector No. 38 (WHT)

     Test circuit F CAN-L

     Test point 1 Gauge control module 32P connector No. 20 (RED)

     Test point 2 VSA modulator-control unit 38P connector No. 26 (RED)

GETtheMANUALS.org

Fig. 23: Checking Continuity Between Gauge Control Module 32P Connector And VSA Modulator-Control Unit 38P Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The F CAN wires are OK. **Replace the gauge control module** See **GAUGE CONTROL MODULE REMOVAL AND INSTALLATION** or **Rewriting the ODO Data and Transferring the Maintenance Minder™ Data to a New Gauge Control Module** .

NO : An open or poor connection in the F CAN wires between the VSA modulator-control unit and the gauge control module.

DTC U0127: GAUGE CONTROL MODULE LOST COMMUNICATION WITH TPMS CONTROL UNIT (TPMS MESSAGE)

GETtheMANUALS.org

DTC Troubleshooting: U0127

Fig. 24: DTC Troubleshooting Chart (U0127)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC Description	DTC
U0127 Gauge Control Module Lost Communication With TPMS Control Unit (TPMS Message)	

NOTE:

- **If you have any loss of communication DTCs for the PCM, troubleshoot those DTCs first.**
- **If you are troubleshooting multiple DTCs, be sure to follow the instructions in B-CAN System Diagnosis Test Mode A.**

1. Problem verification:

GETtheMANUALS.org

- 1. Clear the DTCs with the HDS.
- 2. Turn the ignition switch to LOCK (0) and then back to ON (II).
- 3. Wait for at least 6 seconds.
- 4. Check for DTCs with the HDS.

DTC Description	DTC
U0127 Gauge Control Module Lost Communication With TPMS Control Unit (TPMS Message)	

Is DTC U0127 indicated?

YES : Go to step 2.

NO : Intermittent failure, the system is OK at this time. Check for loose or poor connections.

2. Fuse check:
   - 1. Check the following fuses.

     Fuse No. B5 (10 A)

     No. B40 (7.5 A)

     Location Under-dash fuse/relay box

Is each fuse OK?

YES : Go to step 3.

NO : Replace the fuse. If the fuse blows again, repair a short to ground in the No. B5 (10 A) and/or No. B40 (7.5 A) fuse circuit(s).

3. Open wire check (+B TPMS line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     TPMS control unit 20P connector

   - 3. Measure the voltage between test points 1 and 2.

     Test condition IG LOCK (0)

     TPMS control unit 20P connector: disconnected

     Test circuit +B TPMS

GETtheMANUALS.org

Test point 1 TPMS control unit 20P connector No. 1 (RED)

Test point 2 Body ground

Fig. 25: Measuring Voltage Between TPMS Control Unit 20P Connector No. 1 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The +B TPMS wire is OK. Go to step 4.

NO : Repair an open or high resistance in the wire.

4. Open wire check (IG1 METER line):
   - 1. Turn the ignition switch to ON (II).
   - 2. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     TPMS control unit 20P connector: disconnected

     Test circuit IG1 METER

     Test point 1 TPMS control unit 20P connector No. 3 (LT GRN)

     Test point 2 Body ground

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The IG1 METER wire is OK. Go to step 5.

NO : Repair an open or high resistance in the wire.

5. Open wire check (GND line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check for continuity between test points 1 and 2.

   Test condition IG LOCK (0)

   TPMS control unit 20P connector: disconnected

   Test circuit GND

   Test point 1 TPMS control unit 20P connector No. 8 (BLK)

   Test point 2 Body ground

GETtheMANUALS.org

Fig. 27: Checking Continuity Between TPMS Control Unit 20P Connector No. 8 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The GND wire is OK. Go to step 6.

NO : Repair an open or high resistance in the ground wire or poor ground (G503).

6. Open wire check (F CAN lines):
   - 1. Disconnect the following connector.

     Gauge control module 32P connector

   - 2. Check for continuity between test points 1 and 2 respectively.

     Test condition IG LOCK (0)

     TPMS control unit 20P connector: disconnected

     Gauge control module 32P connector: disconnected

     Test circuit F CAN-H

     Test point 1 TPMS control unit 20P connector No. 9 (WHT)

     Test point 2 Gauge control module 32P connector No. 19 (WHT)

     Test circuit F CAN-L

     Test point 1 TPMS control unit 20P connector No. 20 (RED)

     Test point 2 Gauge control module 32P connector No. 20 (RED)

GETtheMANUALS.org

Fig. 28: Checking Continuity Between TPMS Control Unit 20P Connector And Gauge Control Module 32P Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The F CAN wires are OK. **Replace the gauge control module** See **Rewriting the ODO Data and Transferring the Maintenance Minder™ Data to a New Gauge Control Module** or **GAUGE CONTROL MODULE REMOVAL AND INSTALLATION** .

NO : An open or poor connection in the F CAN wires between the TPMS control unit and the gauge control module.

DTC U0131: F-CAN MALFUNCTION (PCM-EPS CONTROL UNIT)

GETtheMANUALS.org

DTC Troubleshooting: U0131

Fig. 29: DTC Troubleshooting Chart (U0131)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS or HOW TO TROUBLESHOOT THE A/T SYSTEM .**

GETtheMANUALS.org

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
U0131 F-CAN MALFUNCTION (PCM-EPS CONTROL UNIT)			

1. DTC check:
   - 1. Turn the ignition switch to ON (II).
   - 2. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
U0029 F-CAN MALFUNCTION (BUS-OFF(PCM))			
U0131 F-CAN MALFUNCTION (PCM-EPS CONTROL UNIT)			

Are DTC U0029 and U0131 indicated at the same time?

YES : Go to **THE TROUBLESHOOTING FOR DTC U0029**.

NO : Go to step 2.

2. Problem verification:
   - 1. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 2. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
U0131 F-CAN MALFUNCTION (PCM-EPS CONTROL UNIT)			

Is DTC U0131 indicated?

YES : The failure is duplicated. Go to step 3.

NO : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the EPS control unit and the PCM.

3. EPS system check:
   - 1. Check that the HDS communicates with the EPS system.

Does the HDS communicate with the EPS control unit?

YES : Go to step 4.

GETtheMANUALS.org

NO : **GO TO THE SYMPTOM TROUBLESHOOTING FOR AN EPS INDICATOR DOES NOT GO OFF, AND NO DTCS ARE STORED** .

4. Open wire check (F CAN-H line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connectors.

     PCM connector A (49P)

     EPS control unit connect A (11P)

   - 4. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

U0151 Gauge Control Module Lost Communication With SRS Unit (SRS Message)	

NOTE:

- **If you have any loss of communication DTCs for the PCM, troubleshoot those DTCs first.**
- **If you are troubleshooting multiple DTCs, be sure to follow the instructions in B-CAN System Diagnosis Test Mode A.**

*: Wire colors may be substituted for SRS circuits.

1. Problem verification:
   - 1. Clear the DTCs with the HDS.
   - 2. Turn the ignition switch to LOCK (0) and then back to ON (II).
   - 3. Wait for at least 6 seconds.
   - 4. Check for DTCs with the HDS.

DTC Description	DTC
U0151 Gauge Control Module Lost Communication With SRS Unit (SRS Message)	

Is DTC U0151 indicated?

YES : Go to step 2.

NO : Intermittent failure, the system is OK at this time. Check for loose or poor connections.

GETtheMANUALS.org

2. Open wire check (F CAN lines):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Disconnect the following connectors.

      Gauge control module 32P connector

      SRS unit connector A (39P)

    - 3. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      Gauge control module 32P connector: disconnected

      SRS unit connector A (39P): disconnected

      Test circuit F CAN-H

      Test point 1 Gauge control module 32P connector No. 19 (WHT)

      Test point 2 SRS unit connector A (39P) No. 20 (WHT*)

      Test circuit F CAN-L

      Test point 1 Gauge control module 32P connector No. 20 (RED)

      Test point 2 SRS unit connector A (39P) No. 21 (RED*)

GETtheMANUALS.org

Fig. 37: Checking Continuity Between Gauge Control Module 32P Connector And SRS Unit Connector A (39P) Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The F CAN wires are OK. **Replace the gauge control module** See **Rewriting the ODO Data and Transferring the Maintenance Minder™ Data to a New Gauge Control Module** or **GAUGE CONTROL MODULE REMOVAL AND INSTALLATION** .

NO : An open or poor connection in the F CAN wires between the SRS unit and the gauge control module.

DTC U0155: F-CAN MALFUNCTION (PCM-GAUGE CONTROL MODULE)

GETtheMANUALS.org

DTC Troubleshooting: U0155

Fig. 38: DTC Troubleshooting Chart (U0155)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS or HOW TO TROUBLESHOOT THE A/T SYSTEM .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
U0155 F-CAN MALFUNCTION (PCM-GAUGE CONTROL MODULE)			

GETtheMANUALS.org

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 3. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
U0155 F-CAN MALFUNCTION (PCM-GAUGE CONTROL MODULE)			

Is DTC U0155 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the gauge control module and the PCM.

2. Gauge control module DTC check:
   - 1. Check for gauge control module DTCs with the HDS.

GAUGE CONTROL MODULE

DTC Description	DTC	Freeze Frame
U0029 F-CAN communication line error		
U0100 Gauge control module lost communication with ENG/AT		

Is DTC U0029 and/or U0100 indicated?

YES : Go to step 3.

NO : **DO THE GAUGE CONTROL MODULE INPUT TEST** .

3. Open wire check (F CAN-H line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connectors.

     PCM connector A (49P)

     Gauge control module 32P connector

   - 4. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

GETtheMANUALS.org

PCM connector A (49P): disconnected

Gauge control module 32P connector: disconnected

Test circuit F CAN-H

Test point 1 PCM connector A (49P) No. 3 (WHT)

Test point 2 Gauge control module 32P connector No. 19 (WHT)

Fig. 39: Checking Continuity Between PCM Connector A (49P) No. 3 And Gauge Control Module 32P Connector No. 19 Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The F CAN-H wire is OK. Go to step 4.

NO : Repair an open in the F CAN-H wire between the PCM (A3) and the gauge control module, then **do the repair verification** .

4. Open wire check (F CAN-L line):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     PCM connector A (49P): disconnected

     Gauge control module 32P connector: disconnected

GETtheMANUALS.org

Test circuit F CAN-L

Test point 1 PCM connector A (49P) No. 4 (RED)

Test point 2 Gauge control module 32P connector No. 20 (RED)

Fig. 40: Checking Continuity Between PCM Connector A (49P) No. 4 And Gauge Control Module 32P Connector No. 20 Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The F CAN-L wire is OK. **Substitute a known-good gauge control module** See **Rewriting the ODO Data and Transferring the Maintenance Minder™ Data to a New Gauge Control Module** or **GAUGE CONTROL MODULE REMOVAL AND INSTALLATION** , then **do the repair verification** . If DTC U0155 is not indicated after substitution, **replace the original gauge control module** See **Rewriting the ODO Data and Transferring the Maintenance Minder™ Data to a New Gauge Control Module** or **GAUGE CONTROL MODULE REMOVAL AND INSTALLATION** , then **do the repair verification** .

NO : Repair an open in the F CAN-L wire between the PCM (A4) and the gauge control module, then **do the repair verification** .

REPAIR VERIFICATION

- Turn the ignition switch to LOCK (0).
- Reconnect all connectors.
- Turn the ignition switch to ON (II).
- **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .

GETtheMANUALS.org

- **DO THE PCM IDLE LEARN PROCEDURE** .
- Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
U0155 F-CAN MALFUNCTION (PCM-GAUGE CONTROL MODULE)			

Is DTC U0155 indicated?

YES : Check for poor connections or loose terminals at the gauge control module and the PCM, then go to step 1.

NO : Troubleshooting is complete. If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

DTC U1280 OR DTC INDICATOR 80: COMMUNICATION BUS LINE ERROR (BUS-OFF)

Fig. 41: DTC Troubleshooting Chart (U1280 Or DTC Indicator 80)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC Description	DTC
U1280 Communication bus line error (BUS-OFF)	

1. Problem verification:
   - 1. Clear the DTCs with the HDS.
   - 2. Turn the ignition switch to LOCK (0), and then back to ON (II).
   - 3. **Do the Self-Diagnostic Function with the HDS or the climate control unit** See **HOW TO TROUBLESHOOT THE BODY ELECTRICAL** or **HOW TO TROUBLESHOOT THE CLIMATE CONTROL SYSTEM** .
   - 4. Wait for at least 6 seconds.
   - 5. Check for DTCs.

GETtheMANUALS.org

DTC Description	DTC
U1280 Communication bus line error (BUS-OFF)	

Is DTC U1280 or 80 indicated?

YES : **GO TO THE MICU U1280 TROUBLESHOOTING**.

NO : Intermittent failure, the system is OK at this time.

DTC U1280: AUTOMATIC LIGHTING/SUNLIGHT SENSOR COMMUNICATION BUS LINE ERROR (BUS-OFF)

Fig. 42: DTC Troubleshooting Chart (U1280)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC Description	DTC
U1280 Automatic Lighting/Sunlight Sensor Communication Bus Line Error (BUS-OFF)	

1. Problem verification:
   - 1. Clear the DTCs with the HDS.
   - 2. Turn the ignition switch to LOCK (0) and then back to ON (II).
   - 3. Wait for at least 6 seconds.
   - 4. Check for DTCs with the HDS.

DTC Description	DTC
U1280 Automatic Lighting/Sunlight Sensor Communication Bus Line Error (BUS-OFF)	

Is DTC U1280 indicated?

YES : **GO TO MICU DTC U1280 TROUBLESHOOTING**.

NO : Intermittent failure, the system is OK at this time. Check for loose or poor connections.

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC Description	DTC
U1280 Communication Bus Line Error (BUS-OFF)	

NOTE:

- **Refer to the Electrical Wiring Diagrams for the location of the under-dash fuse/relay box connectors.**
- **If you are troubleshooting multiple DTCs, be sure to follow the instructions in B-CAN System Diagnosis Test Mode A.**

1. Problem verification:
   - 1. Clear the DTCs with the HDS.
   - 2. Turn the ignition switch to LOCK (0) and then back to ON (II).
   - 3. Wait for at least 6 seconds.
   - 4. Check for DTCs with the HDS.

DTC Description	DTC

GETtheMANUALS.org

U1280 Communication Bus Line Error (BUS-OFF)	

Is DTC U1280 indicated?

YES : Go to step 2.

NO : Intermittent failure, the system is OK at this time. Check for loose or poor connections.

2. B CAN related units check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the appropriate connector at each control unit in the table one at a time. Clear the DTC, then recheck for DTCs after each unit is disconnected.

Control Unit	Connector
Gauge control module	32P connector
Immobilizer-keyless control unit	7P connector
Automatic lighting/sunlight sensor	7P connector
Climate control unit	32P connector

DTC Description	DTC
U1280 Communication Bus Line Error (BUS-OFF)	

Is DTC U1280 indicated with each individual unit disconnected?

YES : Leave the connectors disconnected, and go to step 3.

NO : Replace the control unit that was disconnected when DTC U1280 did not reset.

3. Shorted wire check (B CAN lines):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Under-dash fuse/relay box connector K (12P)

   - 3. Check for continuity between test points 1 and 2 individually.

     Test condition IG LOCK (0)

     Under-dash fuse/relay box connector K (12P): disconnected

     Test circuit B CAN-L

     Test point 1 Under-dash fuse/relay box connector K (12P) No. 1 (BLU)

GETtheMANUALS.org

Test point 2 Body ground

Test circuit B CAN-H

Test point 1 Under-dash fuse/relay box connector K (12P) No. 2 (PNK)

Test point 2 Body ground

Fig. 46: Checking Continuity Between Under-Dash Fuse/Relay Box Connector K (12P) No. 1, 2 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to ground in the B CAN wires.

NO : The B CAN wires are OK. Go to step 4.

4. Shorted wire check (B CAN-L to B CAN-H line):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Under-dash fuse/relay box connector K (12P): disconnected

     Test circuit B CAN-L, B CAN-H

     Test point 1 Under-dash fuse/relay box connector K (12P) No. 1 (BLU)

     Test point 2 Under-dash fuse/relay box connector K (12P) No. 2 (PNK)

GETtheMANUALS.org

Fig. 47: Checking Continuity Between Under-Dash Fuse/Relay Box Connector K (12P) No. 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short in the B CAN-L to B CAN-H wire.

NO : The B CAN-L to B CAN-H wire is OK. Faulty MICU; **REPLACE THE UNDER-DASH FUSE/RELAY BOX** .

DTC U1281: AUTOMATIC LIGHTING/SUNLIGHT SENSOR LOST COMMUNICATION WITH MICU

Fig. 48: DTC Troubleshooting Chart (U1281)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC Description	DTC
U1281 Automatic Lighting/Sunlight Sensor Lost Communication With MICU	

1. Problem verification:
   - 1. Clear the DTCs with the HDS.
   - 2. Turn the ignition switch to LOCK (0) and then back to ON (II).
   - 3. Wait for at least 6 seconds.
   - 4. Check for DTCs with the HDS.

GETtheMANUALS.org

NOTE: **If you are troubleshooting multiple DTCs, be sure to follow the instructions in B-CAN System Diagnosis Test Mode A.**

1. Problem verification:
   - 1. Clear the DTCs with the HDS.
   - 2. Turn the ignition switch to LOCK (0) and then back to ON (II).
   - 3. Wait for at least 6 seconds.
   - 4. Check for DTCs with the HDS.

DTC Description	DTC
U1281 Immobilizer-Keyless Control Unit Lost Communication With MICU (MICU Frame)	

Is DTC U1281 indicated?

YES : **GO TO MICU DTC U1280 TROUBLESHOOTING**.

NO : Intermittent failure, the system is OK at this time. Check for loose or poor connections.

DTC U128D: LOST COMMUNICATION WITH GAUGE CONTROL MODULE (CLIMATE CONTROL UNIT); DTC INDICATOR 81: CLIMATE CONTROL UNIT LOST COMMUNICATION WITH GAUGE CONTROL MODULE (ECT MESSAGE); DTC INDICATOR 83: CLIMATE CONTROL UNIT LOST

GETtheMANUALS.org

COMMUNICATION WITH GAUGE CONTROL MODULE (VSP MESSAGE)

Fig. 51: DTC Troubleshooting Chart (U128D Or DTC Indicator 81, 83)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

DTC Description	DTC
U128D Lost communication with gauge control module (climate control unit)	

1. Problem verification:
   - 1. Clear the DTCs with the HDS.
   - 2. Turn the ignition switch to LOCK (0) and then back to ON (II).
   - 3. **Do the Self-Diagnostic Function with the HDS or the climate control unit** See **HOW TO TROUBLESHOOT THE BODY ELECTRICAL** or **HOW TO TROUBLESHOOT THE CLIMATE CONTROL SYSTEM** .
   - 4. Check for DTCs.

DTC Description	DTC
U128D Lost communication with gauge control module (climate control unit)	

Is DTC U128D and 81 and 83 indicated?

YES : Go to step 2.

NO : Intermittent failure, the system is OK at this time. Check for loose or poor connections.

2. Determine possible failure area (gauge control module power and ground, B-CAN lines):
   - 1. Select B-CAN Control Units Information from the Body Electrical System Select menu, and then select Check Connected Control Units.
   - 2. Check the DETECT/NOT AVAILABLE information of the GAUGE CONTROL MODULE.

Is DETECT indicated?

YES : Go to step 3.

NO : Go to step 4.

3. Open wire check (B CAN-H, B CAN-L lines):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connectors.

     Gauge control module 32P connector

     Climate control unit 32P connector

   - 3. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Gauge control module 32P connector: disconnected

GETtheMANUALS.org

Climate control unit 32P connector: disconnected

Test circuit B CAN-H

Test point 1 Gauge control module 32P connector No. 30 (PNK)

Test point 2 Climate control unit 32P connector No. 16 (PNK)

Fig. 52: Checking Continuity Between Gauge Control Module 32P Connector No. 30 And Climate Control Unit 32P Connector No. 16
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair an open or poor connection in the B CAN-L wire between the climate control unit and the gauge control module.

NO : Repair an open or poor connection in the B CAN-H wire between the climate control unit and the gauge control module.

4. Fuse check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check the following fuses.

   Fuse No. A29 (10 A)

   Location Under-hood fuse/relay box

   Fuse No. B5 (10 A)

   Location Under-dash fuse/relay box

GETtheMANUALS.org

Are the fuses OK?

YES : Go to step 5.

NO : Replace the fuse(s), and recheck. If the fuse(s) blow again, repair a short to ground in the No. A29 (10 A) fuse and/or the No. B5 (10 A) fuse circuit(s).

5. Open wire check (IG1 METER line):
   - 1. Disconnect the following connector.

     Gauge control module 32P connector

   - 2. Turn the ignition switch to ON (II).
   - 3. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     Gauge control module 32P connector: disconnected

     Test circuit IG1 METER

     Test point 1 Gauge control module 32P connector No. 17 (LT GRN)

     Test point 2 Body ground

Fig. 53: Measuring Voltage Between Gauge Control Module 32P Connector No. 17 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The IG1 METER wire is OK. Go to step 6.

NO : Repair an open in the IG1 METER wire.

6. Open wire check (+B BACK UP line):

GETtheMANUALS.org

- 1. Turn the ignition switch to LOCK (0).
- 2. Measure the voltage between test points 1 and 2.

  Test condition IG LOCK (0)

  Gauge control module 32P connector: disconnected

  Test circuit +B BACK UP

  Test point 1 Gauge control module 32P connector No. 1 (RED)

  Test point 2 Body ground

Fig. 54: Measuring Voltage Between Gauge Control Module 32P Connector No. 1 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The +B BACK UP wire is OK. Go to step 7.

NO : Repair an open in the wire between the No. A29 (10 A) fuse in the under-hood fuse/relay box and gauge control module.

7. Open wire check (GND lines):
   - 1. Check for continuity between test points 1 and 2 individually.

     Test condition IG LOCK (0)

     Gauge control module 32P connector: disconnected

     Test circuit GND

     Test point 1 Gauge control module 32P connector No. 4 (BRN)

     Test point 2 Body ground

     Test circuit GND

GETtheMANUALS.org

Test point 2 Body ground

Fig. 55: Checking Continuity Between Gauge Control Module 32P Connector No. 4, 32 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The GND wires are OK. Go to step 8.

NO : Check for an open in the wire(s) between the gauge control module and body ground. If the wires are OK, check poor ground at G502.

8. Open wire check (B CAN-H, B CAN-L lines):
   - 1. Disconnect the following connector.

     Climate control unit 32P connector

   - 2. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Gauge control module 32P connector: disconnected

     Climate control unit 32P connector: disconnected

     Test circuit B CAN-H

     Test point 1 Gauge control module 32P connector No. 30 (PNK)

     Test point 2 Climate control unit 32P connector No. 16 (PNK)

GETtheMANUALS.org

Fig. 56: Checking Continuity Between Gauge Control Module 32P Connector No. 30 And Climate Control Unit 32P Connector No. 16
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair an open or poor connection in the B CAN-L wire between the climate control unit and the gauge control module.

NO : Repair an open or poor connection in the B CAN-H wire between the climate control unit and the gauge control module.

DTC U128D: AUTOMATIC LIGHTING/SUNLIGHT SENSOR LOST COMMUNICATION WITH GAUGE CONTROL MODULE

GETtheMANUALS.org

DTC Troubleshooting: U128D

GETtheMANUALS.org

Fig. 57: DTC Troubleshooting Chart (U128D)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC Description	DTC
U128D Automatic Lighting/Sunlight Sensor Lost Communication With Gauge Control Module	

1. Problem verification:
   - 1. Clear the DTCs with the HDS.
   - 2. Turn the ignition switch to LOCK (0) and then back to ON (II).
   - 3. Wait for at least 6 seconds.
   - 4. Check for DTCs with the HDS.

DTC Description	DTC
U128D Automatic Lighting/Sunlight Sensor Lost Communication With Gauge Control Module	

Is DTC U128D indicated?

YES : Go to step 2.

NO : Intermittent failure, the system is OK at this time. Check for loose or poor connections.

2. Determine possible failure area (gauge control module power and ground, B CAN line):
   - 1. Select B-CAN CONTROL UNITS INFORMATION from the BODY ELECTRICAL SYSTEM SELECT menu, and then select CHECK CONNECTED CONTROL UNITS.
   - 2. Check the DETECT/NOT AVAILABLE information of the GAUGE CONTROL MODULE.

Is DETECT indicated?

YES : Go to step 8.

NO : Go to step 3.

3. Fuse check:
   - 1. Check the following fuse.

     Fuse No. A29 (10 A)

     Location Under-hood fuse/relay box

Is the fuse OK?

YES : Go to step 4.

GETtheMANUALS.org

NO : Replace the fuse. If the fuse blows again, repair a short to ground in the No. A29 (10A) fuse circuit.

4. Open wire check (+B BACK UP line):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Disconnect the following connector.

      Gauge control module 32P connector

    - 3. Measure the voltage between test points 1 and 2.

      Test condition IG LOCK (0)

      Gauge control module 32P connector: disconnected

Is there continuity?

YES : The GND wires are OK. Go to step 7.

NO : Repair an open or high resistance in the ground wire or poor ground (G502).

7. Open wire check (B CAN lines):
   - 1. Disconnect the following connector.

     Automatic lighting/sunlight sensor 7P connector

   - 2. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Gauge control module 32P connector: disconnected

     Automatic lighting/sunlight sensor 7P connector: disconnected

     Test circuit B CAN-H

     Test point 1 Automatic lighting/sunlight sensor 7P connector No. 6 (PNK)

     Test point 2 Gauge control module 32P connector No. 30 (PNK)

GETtheMANUALS.org

Fig. 61: Checking Continuity Between Automatic Lighting/Sunlight Sensor 7P Connector No. 6 And Gauge Control Module 32P Connector No. 30
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : An open or poor connection in the B CAN-L wire between the automatic lighting/sunlight sensor and the gauge control module.

NO : An open or poor connection in the B CAN-H wire between the automatic lighting/sunlight sensor and the gauge control module.

8. Open wire check (B CAN lines):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connectors.

     Gauge control module 32P connector

     Automatic lighting/sunlight sensor 7P connector

   - 3. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Gauge control module 32P connector: disconnected

     Automatic lighting/sunlight sensor 7P connector: disconnected

     Test circuit B CAN-H

GETtheMANUALS.org

Test point 1 Automatic lighting/sunlight sensor 7P connector No. 6 (PNK)

Test point 2 Gauge control module 32P connector No. 30 (PNK)

Fig. 62: Checking Continuity Between Automatic Lighting/Sunlight Sensor 7P Connector No. 6 And Gauge Control Module 32P Connector No. 30
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : An open or poor connection in the B CAN-L wire between the automatic lighting/sunlight sensor and the gauge control module.

NO : An open or poor connection in the B CAN-H wire between the automatic lighting/sunlight sensor and the gauge control module.

DTC U128D: IMMOBILIZER-KEYLESS CONTROL UNIT LOST COMMUNICATION WITH GAUGE CONTROL MODULE

GETtheMANUALS.org

DTC Troubleshooting: U128D

GETtheMANUALS.org

Fig. 63: DTC Troubleshooting Chart (U128D)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC Description	DTC
U128D Immobilizer-Keyless Control Unit Lost Communication With Gauge Control Module	

NOTE: **If you are troubleshooting multiple DTCs, be sure to follow the instructions in B-CAN System Diagnosis Test Mode A.**

1. Problem verification:
   - 1. Clear the DTCs with the HDS.
   - 2. Turn the ignition switch to LOCK (0) and then back to ON (II).
   - 3. Wait for at least 6 seconds.
   - 4. Check for DTCs with the HDS.

DTC Description	DTC
U128D Immobilizer-Keyless Control Unit Lost Communication With Gauge Control Module	

Is DTC U128D indicated?

YES : Go to step 2.

NO : Intermittent failure, the system is OK at this time. Check for loose or poor connections.

2. Determine possible failure area (gauge control module power and ground, B CAN line):
   - 1. Select B-CAN CONTROL UNITS INFORMATION from the BODY ELECTRICAL SYSTEM SELECT menu, and then select CHECK CONNECTED CONTROL UNITS.
   - 2. Check the DETECT/NOT AVAILABLE information of the GAUGE CONTROL MODULE.

Is DETECT indicated?

YES : Go to step 8.

NO : Go to step 3.

3. Fuse check:
   - 1. Check the following fuses.

     Fuse No. A29 (10 A)

     Location Under-hood fuse/relay box

     Fuse No. B5 (10 A)

GETtheMANUALS.org

Location Under-dash fuse/relay box

Is each fuse OK?

YES : Go to step 4.

NO : Replace the fuse. If the fuse blows again, repair a short to ground in the No. A29 (10 A) and/or No. B5 (10 A) fuse circuit(s).

4. Open wire check (+B BACK UP line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Gauge control module 32P connector

   - 3. Measure the voltage between test points 1 and 2.

     Test condition IG LOCK (0)

     Gauge control module 32P connector: disconnected

     Test circuit +B BACK UP

     Test point 1 Gauge control module 32P connector No. 1 (RED)

     Test point 2 Body ground

Fig. 64: Measuring Voltage Between Gauge Control Module 32P Connector No. 1 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The +B BACK UP wire is OK. Go to step 5.

NO : Repair an open or high resistance in the wire.

GETtheMANUALS.org

5. Open wire check (IG1 METER line):
    - 1. Turn the ignition switch to ON (II).
    - 2. Measure the voltage between test points 1 and 2.

    Test condition IG ON (II)

    Gauge control module 32P connector: disconnected

    Test circuit IG1 METER

    Test point 1 Gauge control module 32P connector No. 17 (LT GRN)

    Test point 2 Body ground

Fig. 65: Measuring Voltage Between Gauge Control Module 32P Connector No. 17 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The IG1 METER wire is OK. Go to step 6.

NO : Repair an open or high resistance in the wire.

6. Open wire check (GND lines):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Check for continuity between test points 1 and 2 individually.

    Test condition IG LOCK (0)

    Gauge control module 32P connector: disconnected

    Test circuit GND

    Test point 1 Gauge control module 32P connector No. 4 (BRN)

GETtheMANUALS.org

Test point 2 Body ground

Test circuit GND

Test point 1 Gauge control module 32P connector No. 32 (BRN)

Test point 2 Body ground

Fig. 66: Checking Continuity Between Gauge Control Module 32P Connector No. 4, 32 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The GND wires are OK. Go to step 7.

NO : Repair an open or high resistance in the ground wire or poor ground (G502).

7. Open wire check (B CAN lines):
   - 1. Disconnect the following connector.

     Immobilizer-keyless control unit 7P connector

   - 2. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Gauge control module 32P connector: disconnected

     Immobilizer-keyless control unit 7P connector: disconnected

     Test circuit B CAN-H

     Test point 1 Immobilizer-keyless control unit 7P connector No. 4 (PNK)

     Test point 2 Gauge control module 32P connector No. 30 (PNK)

GETtheMANUALS.org

Fig. 67: Checking Continuity Between Immobilizer-Keyless Control Unit 7P Connector No. 4 And Gauge Control Module 32P Connector No. 30
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : An open or poor connection in the B CAN-L wire between the immobilizer-keyless control unit and the gauge control module.

NO : An open or poor connection in the B CAN-H wire between the immobilizer-keyless control unit and the gauge control module.

8. Open wire check (B CAN lines):
   - 1. Disconnect the following connectors.

     Gauge control module 32P connector

     Immobilizer-keyless control unit 7P connector

   - 2. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Gauge control module 32P connector: disconnected

     Immobilizer-keyless control unit 7P connector: disconnected

     Test circuit B CAN-H

     Test point 1 Immobilizer-keyless control unit 7P connector No. 4 (PNK)

GETtheMANUALS.org

Test point 2 Gauge control module 32P connector No. 30 (PNK)

Fig. 68: Checking Continuity Between Immobilizer-Keyless Control Unit 7P Connector No. 4 And Gauge Control Module 32P Connector No. 30
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : An open or poor connection in the B CAN-L wire between the immobilizer-keyless control unit and the gauge control module.

NO : An open or poor connection in the B CAN-H wire between the immobilizer-keyless control unit and the gauge control module.

DTC U128D: MICU LOST COMMUNICATION WITH GAUGE CONTROL MODULE

GETtheMANUALS.org

DTC Troubleshooting: U128D

Is there battery voltage?

YES : The IG1 METER wire is OK. Go to step 5.

NO : Repair an open or high resistance in the wire.

5. Open wire check (GND lines):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check for continuity between test points 1 and 2 individually.

     Test condition IG LOCK (0)

     Gauge control module 32P connector: disconnected

     Test circuit GND

     Test point 1 Gauge control module 32P connector No. 4 (BRN)

     Test point 2 Body ground

     Test circuit GND

     Test point 1 Gauge control module 32P connector No. 32 (BRN)

     Test point 2 Body ground

GETtheMANUALS.org

Fig. 72: Checking Continuity Between Gauge Control Module 32P Connector No. 4, 32 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The GND wires are OK. Go to step 6.

NO : Repair an open or high resistance in the ground wire or poor ground (G502).

6. Open wire check (B CAN lines):
   - 1. Disconnect the following connector.

     Under-dash fuse/relay box connector K (12P)

   - 2. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Gauge control module 32P connector: disconnected

     Under-dash fuse/relay box connector K (12P): disconnected

     Test circuit B CAN-H

     Test point 1 Under-dash fuse/relay box connector K (12P) No. 2 (PNK)

     Test point 2 Gauge control module 32P connector No. 30 (PNK)

GETtheMANUALS.org

Fig. 73: Checking Continuity Between Under-Dash Fuse/Relay Box Connector K (12P) No. 2 And Gauge Control Module 32P Connector No. 30
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : An open or poor connection in the B CAN-L wire between the MICU and the gauge control module.

NO : An open or poor connection in the B CAN-H wire between the MICU and the gauge control module.

DTC U3000-49: GAUGE CONTROL MODULE INTERNAL CIRCUIT ERROR

Fig. 74: DTC Troubleshooting Chart (U3000-49)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC Description	DTC

GETtheMANUALS.org

U3000-49 Gauge Control Module Internal Circuit Error	

1. Problem verification:
   - 1. Clear the DTCs with the HDS.
   - 2. Turn the ignition switch to LOCK (0) and then back to ON (II).
   - 3. Check for DTCs with the HDS.

DTC Description	DTC
U3000-49 Gauge Control Module Internal Circuit Error	

Is DTC U3000-49 indicated?

YES : **Replace the gauge control module** See **Rewriting the ODO Data and Transferring the Maintenance Minder™ Data to a New Gauge Control Module** or **GAUGE CONTROL MODULE REMOVAL AND INSTALLATION** .

NO : Intermittent failure, the system is OK at this time.

DTC U3000-49: CONTROL MODULE INTERNAL CONTROL MODULE MALFUNCTION

Fig. 75: DTC Troubleshooting Chart (U3000-49)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, REVIEW THE HOW TO TROUBLESHOOT THE REAL TIME AWD SYSTEM .**

DTC Description	DTC	Freeze Frame
U3000-49 Control Module Internal Control Module Malfunction		

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).

GETtheMANUALS.org

- 2. Clear the DTC with the HDS.
- 3. Start the engine.
- 4. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
U3000-49 Control Module Internal Control Module Malfunction		

Is DTC U3000-49 indicated?

YES : **Update the real time AWD control unit if it does not have the latest software** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** , or **substitute a known-good real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** , and recheck. If the symptom/indication goes away with the updated real time AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good real time AWD control unit, **replace the original real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** .

NO : Intermittent failure, the system is OK at this time.

DTC U3000-51: CONTROL MODULE PROGRAMMING ERROR

Fig. 76: DTC Troubleshooting Chart (U3000-51)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, REVIEW THE HOW TO TROUBLESHOOT THE REAL TIME AWD SYSTEM .**

DTC Description	DTC	Freeze Frame
U3000-51 Control Module Programming Error		

1. Problem verification:
   - 1. **Do the re-programming of the real time AWD control unit** See **REAL TIME AWD**

GETtheMANUALS.org

CONTROL UNIT REMOVAL AND INSTALLATION or **REAL TIME AWD CONTROL UNIT UPDATE** .

- 2. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
U3000-51 Control Module Programming Error		

Is DTC U3000-51 indicated?

YES : **Substitute a known-good real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** , and recheck. If the symptom/indication goes away with a known-good real time AWD control unit, **replace the original real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** .

NO : Intermittent failure, the system is OK at this time.

GETtheMANUALS.org

BODY ELECTRICAL TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE 1 AND TEST MODE 2 (WITHOUT THE HDS)

Shift to Test Mode 1

Check the PCM for DTCs and troubleshoot PCM or F-CAN loss of communication errors first, then do this diagnosis if the HDS is not available.

1. Check the No. A29 (10 A) fuse in the under-hood fuse/relay box, and the No. B5 (10 A) fuse in the under-dash fuse/relay box. If a fuse is blown, find and correct the cause, then replace the fuse.
2. Move the interior light switch to the DOOR position.

NOTE: Do steps 3-7 within 10 seconds.

3. Turn the ignition switch to ON (II).
4. Pull and hold the combination light switch in its Passing position.

Fig. 1: Ignition Switch, Passing Switch And Combination Light Switch Blinking Pattern
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. While holding the switch, turn the headlight switch to the Parking position, then release, pull, and hold the combination switch in its Passing position.
6. Turn off the headlights, then turn the headlight switch to the Parking position, and turn the lights ON and OFF two more times.
7. Release the combination light switch.
8. Wait 5 seconds, and watch the individual map lights, ceiling light (if equipped), and ignition key light (if equipped). When the lights flash quickly once, the system enters Test Mode 1.
9. If individual map light keeps blinking after entering Test Mode 1. Check for B-CAN Unit communication error.

Error	Display code (blinking

GETtheMANUALS.org

	pattern)
Error in the bus (bus off status)	1
Gauge control module communication error (AT frames cannot be received)	5

10. Check for B-CAN DTCs indicated by the LCD display while still in Test Mode 1. Press the SEL/RESET button to display the next code. After you get to the last code, the display shows END. If no DTCs are stored, the display reads NO.

NOTE: **If the test times out, turn the ignition switch to LOCK (0), and repeat steps 3-7.**

Fig. 2: Display - B-CAN DTC On LCD Screen (DTC Detected)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 3: Display - B-CAN DTC On LCD Screen (No DTC Detected)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

Fig. 4: Display - B-CAN DTC On LCD Screen (All DTC Have Been Displayed)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

The control unit that has stored the code can be identified by the number shown on the LCD display.

Control Unit	Control Unit I.D. Number
MICU	10
Gauge control module	50
Climate control unit	51
Automatic lighting/sunlight sensor	72
Immobilizer-keyless control unit	96

NOTE: **You can also check B-CAN communication status by the following methods:**

- **The MICU self-diagnostic function Test Mode 1 and Test Mode 2 can check some communication statuses and some switch circuits.**
- **THE GAUGE CONTROL MODULE SELF-DIAGNOSTIC FUNCTION CAN CHECK COMMUNICATION STATUS .**

11. Record all DTCs and troubleshoot them in this order:
    - Battery voltage DTCs
    - Internal error DTCs
    - Loss of communication DTCs
    - Signal error DTCs
12. Clear the DTCs by pressing and holding the SEL/RESET button for about 10 seconds.
13. You will hear a beep to confirm the codes have been cleared. Operate the devices that failed, and recheck for codes.

Shift to Test Mode 2

NOTE: **Do steps 13-17 within 10 seconds.**

GETtheMANUALS.org

14. Pull and hold the combination light switch in its Passing position.

Fig. 5: Ignition Switch, Passing Switch And Combination Light Switch Blinking Pattern
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. While holding the switch, turn the headlight switch to the Parking position, then release, pull, and hold the combination switch in its Passing position.
16. Turn off the headlights, then turn the headlight switch to the Parking position, and turn the lights ON and OFF two more times.
17. Release the combination light switch.
18. Wait 5 seconds, and watch the individual map lights and ignition key light. When the lights flash two times quickly and then go off, the system is in Test Mode 2.

NOTE: **If you repeat this procedure, the system automatically returns to Test Mode 1.**

19. The following tables list the circuits that can be checked in Test Mode 2. Operate the switch that is most closely related to the problem. If the circuit is OK, the individual map lights, ceiling light, and ignition key light blink once. If the circuit is faulty, there is no such indication.
    - If the front individual map lights, ceiling light, and ignition key light do not blink even when a switch is operated, check two or three other circuits listed in the table. If the front individual map lights, ceiling light, and ignition key light blink for each circuit, the additional circuits are OK; repair the short or open circuit that failed the test in step 18.
    - If the front individual map lights, ceiling light, and ignition key light do not blink again, this means that the control unit has failed without triggering a DTC. Test a few more circuits. If they also fail, check the related control units using their input tests.

Driver's door lock switch (UNLOCK)	Windshield washer switch
Driver's door lock switch (LOCK)	Windshield wiper motor park position (Auto stop)

Driver's door switch	Lighting switch
Front passenger's door switch	Dimmer switch
Left rear door switch	Passing switch
Right rear door switch	Fog light switch
Tailgate latch switch	Ignition key switch
Audio switch	Security hood switch
Windshield wiper HI/LO switch	Brake pedal position switch
Windshield wiper INT/LO switch	Transmission range switch (P)
Windshield wiper MIST switch	A/C pressure switch
Windshield wiper intermittent dwell time controller	
(1) A second key is necessary to check the key cylinder inputs. Be sure to rotate the key cylinder switch two times to each position (lock and lock, unlock and unlock) to ensure the door lock knob switch is in the appropriate position.	

BODY ELECTRICAL TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A - INITIAL COMMUNICATION AND DTC CHECKS

Check the PCM for DTCs and troubleshoot PCM or F-CAN loss of communication errors first, then do this diagnosis if the symptom is related to the B-CAN system.

1. Compare the symptom with this list of B-CAN related systems:
    - Gauge control module
    - Exterior lights
    - Turn signals
    - Entry light control
    - Interior lights
    - Safety indicators
    - Horns (security and panic)
    - Chimes (key-in, seat belt, lights-on, and parking brake)
    - Power window/moonroof timer
    - Wiper/washer
    - Security
    - Keyless entry
    - Power door locks
    - Key interlock
    - Dashlights brightness
    - Immobilizer

GETtheMANUALS.org

- Daytime running lights
- Climate control
  - If the symptom is related to the B-CAN, go to step 2.
  - If the symptom is not related to the B-CAN, go to the system symptom troubleshooting.

2. Connect the HDS to the data link connector (DLC) (A), then turn the ignition switch to ON (II).

Fig. 6: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. From the BODY ELECTRICAL SYSTEM SELECT menu, select B-CAN CONTROL UNITS INFORMATION, and then select CHECK CONNECTED CONTROL UNITS listed to see if the following control units are communicating with the HDS.
   - MICU
   - Gauge control module
   - Immobilizer-keyless control unit
   - Climate control unit (if applicable)
   - Automatic lighting control unit

NOTE:
- **If a unit is communicating with the HDS, DETECT is displayed.**
- **If a unit is not communicating or the vehicle is not equipped, "NOT AVAILABLE" is displayed.**
- **The HDS only checks the status one time when BODY ELECTRICAL is selected. To recheck the status after repair, reboot the HDS.**

   - If all control units are communicating with the HDS, go to step **4** .
   - If any of the control units are not communicating, go to **B-CAN SYSTEM DIAGNOSIS TEST MODE B**.
   - If all units are not communicating or only the MICU is communicating, **go to MICU DTC U1280 troubleshooting** .

4. Select the system that has the problem from the BODY ELECTRICAL SYSTEM SELECT menu, then

GETtheMANUALS.org

select DTCs.

- If any DTCs are indicated, go to step **5** .
- If the problem is related to one of the following items and the system that is malfunctioning does not stop or turn off, go to **B-CAN SYSTEM DIAGNOSIS TEST MODE C**.
- If the problem is related to one of the following items and the system that is malfunctioning does not run or turn on, go to **B-CAN SYSTEM DIAGNOSIS TEST MODE D**.
  - Exterior lights
  - Turn signals
  - Entry light control
  - Interior lights
  - Horns (security and panic)
  - Wiper/washer
  - Power window
  - Power door locks
- If the problem is related to one of the following items, go to the troubleshooting for that individual system.
  - Gauge control module
  - Safety indicators
  - Chimes (key-in, seat belt, lights-on, and parking brake)
  - Security
  - Keyless entry
  - Key interlock
  - Dashlights brightness
  - Audio system
  - Immobilizer
  - Rear window defogger (climate control)
  - Climate control

5. Record all DTCs, and sort them by DTC type.
6. Troubleshoot the DTC(s) in this order:
   - Battery voltage DTCs.
   - Internal error DTCs.
   - Loss of communication DTCs.
   - Signal error DTCs.

BODY ELECTRICAL TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE B - CONTROL UNIT NOT COMMUNICATING

Do this diagnosis if any of the control units are not communicating (NOT AVAILABLE is displayed in the HDS) as found by the **Body Electrical Troubleshooting - B-CAN System Diagnosis Test Mode A - Initial**

GETtheMANUALS.org

Communication and DTC Checks.

1. Using the HDS, select the system that has the symptom from the BODY ELECTRICAL SYSTEM SELECT menu.
2. Select DTCs, and then check for loss of communication DTCs.
   - If any loss of communication DTCs are indicated, go to step **3** .
   - If any loss of communication DTCs are not indicated, faulty MICU; **REPLACE THE UNDER-DASH FUSE/RELAY BOX** .
3. Do the power, ground, and communication part of the input test for the unit(s) not communicating with the HDS.

Unit not communicating
MICU
GAUGE CONTROL MODULE
IMMOBILIZER-KEYLESS CONTROL UNIT
CLIMATE CONTROL UNIT
AUTOMATIC LIGHTING CONTROL UNIT

BODY ELECTRICAL TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE C - NO DTCS AND OUTPUT WON'T SHUT OFF

Do this diagnosis if a component that is controlled by the B-CAN system does not stop or turn off.

NOTE:

- **If the component does not turn on, go to B-CAN SYSTEM DIAGNOSIS TEST MODE D.**
- **See the B-CAN system unit input/output index for a list of input and output devices and the control units that monitor the input and control the output devices.**

1. Check for DTCs by selecting the system MODE MENU from the HDS.
   - If any DTCs are indicated, go to **B-CAN SYSTEM DIAGNOSIS TEST MODE A**.
   - If any DTCs are not indicated, go to step **2** .
2. Turn off the switch that controls the malfunctioning component.
3. Select the applicable system from the system MODE MENU, then select DATA LIST, and check the input of the switch that controls the related component.
   - If HDS indicates the switch is OFF, go to step **4** .
   - If HDS indicates the switch is not OFF, go to step 6.
4. In the DATA LIST, check the output signal of the malfunctioning component.
   - If the output signal is OFF, go to step **5** .
   - If the output signal is not OFF, replace the control unit that controls the device that will not turn OFF.

GETtheMANUALS.org

5. Check the relay that does not stop or turn off, if applicable, then check for a short in the wire between the relay and the component, the relay and control unit, or the component and control unit.
    - If the relay and the wire harness are OK, replace the control unit that controls the component that will not stop or turn OFF.
    - If the relay and the wire harness are not OK, replace the relay or repair/replace the wire harness.
6. Check the switch, then check for a short in the wire between the switch and the control unit that monitors the switch.
    - If the switch and the wire harness are OK, replace the control unit that monitors the switch.
    - If the switch and the wire harness are not OK, replace the switch or repair/replace the appropriate wire harness.

BODY ELECTRICAL TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE D - NO DTCS AND OUTPUT WON'T TURN ON

Do this diagnosis if a component that is controlled by the B-CAN system does not run or come on.

NOTE:

- **If the component does not turn off or stop, go to B-CAN SYSTEM DIAGNOSIS TEST MODE C.**
- **See the B-CAN system unit input/output index for a list of input and output devices and the control units that monitor the input and control the output devices.**

1. Check the fuse of the malfunctioning output device.
    - If the fuse is OK, go to step **2** .
    - If the fuse is not OK, replace the fuse. If the fuse blows again, repair the short to ground on the fuse circuit of the malfunctioning device.
2. Check for DTCs by selecting the system MODE MENU from the HDS.
    - If any DTCs are indicated, go to **B-CAN SYSTEM DIAGNOSIS TEST MODE A**.
    - If any DTCs are not indicated, go to step **3** .
3. Turn ON the switch that controls the malfunctioning component.
4. Select the applicable system from the system MODE MENU, then select DATA LIST, and check the input of the switch that controls the related component.
    - If there is an output signal, go to step **5** .
    - If there is not an output signal, go to step 9.
5. Check the relay (if applicable) and ground, then check for an open or a short in the circuit for the malfunctioning component.
    - If the relay and the wire harness are OK, go to step **6** .
    - If the relay and the wire harness are not OK, replace the relay or repair the wire circuit.
6. Do the function test for the malfunctioning component.
    - If the output device pass the function test, go to step **7** .
    - If the output device does not pass the function test, replace the component.

GETtheMANUALS.org

7. With the malfunctioning output device connected, connect a voltmeter between the malfunctioning output device and body ground on the wire that the control unit uses to control the output device circuit.
8. Select FUNCTIONAL TEST from the system MODE MENU, and do the forced operation test of the malfunctioning component.
    - If the voltage changes (12 V to 0 V or 0 V to 12 V), inspect the ground for the component. If OK, replace the component.
    - If the voltage does not change, replace the control unit that controls the malfunctioning component.
9. Select DATA LIST from the system MODE MENU, and make sure the switch signal input for the malfunctioning system indicates a change when operated.
    - If the switch input indicates ON when the switch is ON, replace the control unit that controls the malfunctioning component.
    - If the switch input does not indicate ON when the switch is ON, go to step **10** .
10. Check the switch and its ground (if applicable), then check for an open or a short in the wire between the switch and the control unit that monitors it.
    - If the switch and the wire harness are OK, replace the control unit that monitors the switch.
    - If the switch and the wire harness are not OK, replace the switch, or repair/replace the wire harness.

1. F-CAN circuit resistance check:
    - 1. Turn the ignition switch to LOCK (0).

GETtheMANUALS.org

- 2. Jump the SCS line with the HDS.
- 3. Disconnect the following connector.

  PCM connector A (49P)

- 4. Disconnect the HDS.
- 5. Measure the resistance between test points 1 and 2.

  Test condition IG LOCK (0)

  PCM connector A (49P): disconnected

  Test circuit F CAN-H, F CAN-L

  Test point 1 PCM connector A (49P) No. 3 (WHT)

  Test point 2 PCM connector A (49P) No. 4 (RED)

Fig. 9: Measuring Resistance Between PCM Connector A (49P) No. 3 And 4
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 46-58 ohms?

YES : Go to step 12.

NO : Go to step 2.

2. Shorted wire check (F CAN-H line to F CAN-L line):
   - 1. Disconnect the following connectors.
     - Gauge control module 32P connector
     - VSA modulator-control unit 38P connector
     - Steering angle sensor 4P connector
     - EPS control unit connector A (11P)
     - Real time AWD control unit 24P connector (with real time AWD)

GETtheMANUALS.org

- SRS unit connector A (39P)
- TPMS control unit 20P connector
- Audio-navigation unit connector B (20P) (with navigation)

- Check for continuity between test points 1 and 2.

Test condition IG LOCK (0)

PCM connector A (49P): disconnected

Gauge control module 32P connector: disconnected

VSA modulator-control unit 38P connector: disconnected

Steering angle sensor 4P connector: disconnected

EPS control unit connector A (11P): disconnected

Real time AWD control unit 24P connector (with real time AWD): disconnected

SRS unit connector A (39P): disconnected

TPMS control unit 20P connector: disconnected

Audio-navigation unit connector B (20P) (with navigation): disconnected

Test circuit F CAN-H, F CAN-L

Test point 1 PCM connector A (49P) No. 3 (WHT)

Test point 2 PCM connector A (49P) No. 4 (RED)

Is there continuity?

YES : Repair a short in the F CAN-L wire between PCM (A4) and the gauge control module, the VSA modulator-control unit, the steering angle sensor, the EPS control unit, the real time AWD control unit, the SRS unit, the TPMS control unit, the navigation unit, or the DLC.

NO : The F CAN-L wire is OK. Go to step 14.

14. Gauge control module check:
    - 1. Reconnect all connectors.
    - 2. Connect the HDS to the DLC.
    - 3. Disconnect the following connector.

      Gauge control module 32P connector

    - 4. Turn the ignition switch to ON (II), and read the HDS.

Does the HDS identify the vehicle?

YES : **Replace the gauge control module** See **GAUGE CONTROL MODULE REMOVAL AND INSTALLATION** or **Rewriting the ODO Data and Transferring the Maintenance Minder™ Data to a New Gauge Control Module** .

NO : Go to step 15.

15. VSA modulator-control unit check:
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Reconnect the gauge control module 32P connector.
    - 3. Disconnect the following connector.

      VSA modulator-control unit 38P connector

GETtheMANUALS.org

- 4. Turn the ignition switch to ON (II).

Does the HDS identify the vehicle?

YES : **Replace the VSA modulator-control unit** See **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION** , **VSA MODULATOR-CONTROL UNIT UPDATE** or **VSA SENSOR NEUTRAL POSITION MEMORIZATION** .

NO : Go to step 16.

16. Steering angle sensor check:
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Reconnect the VSA modulator-control unit 38P connector.
    - 3. Disconnect the following connector.

      Steering angle sensor 4P connector

    - 4. Turn the ignition switch to ON (II), and read the HDS.

Does the HDS identify the vehicle?

YES : **REPLACE THE STEERING ANGLE SENSOR** .

NO : Go to step 17.

17. EPS control unit check:
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Reconnect the steering angle sensor 4P connector.
    - 3. Disconnect the following connector.

      EPS control unit connector A (11P)

    - 4. Turn the ignition switch to ON (II), and read the HDS.

Does the HDS identify the vehicle?

YES : **Replace the EPS control unit** See **EPS CONTROL UNIT REMOVAL AND INSTALLATION** or **EPS CONTROL UNIT UPDATE** .

NO (with real time AWD) : Go to step 18.

NO (without real time AWD) : Go to step 19.

18. Real time AWD control unit check:
    - 1. Turn the ignition switch to LOCK (0).

GETtheMANUALS.org

- 2. Reconnect EPS control unit connector A (11P).
- 3. Disconnect the following connector.

  Real time AWD control unit 24P connector

- 4. Turn the ignition switch to ON (II), and read the HDS.

Does the HDS identify the vehicle?

YES : **Replace the real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** .

NO : Go to step 19.

19. SRS unit check:
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Reconnect EPS control unit connector A (11P) or real time AWD control unit 24P connector.
    - 3. Disconnect the following connector.

      SRS unit connector A (39P)

    - 4. Turn the ignition switch to ON (II), and read the HDS.

    Does the HDS identify the vehicle?

    YES : **Replace the SRS unit** See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE** .

    NO (with navigation) : Go to step 20.

    NO (without navigation) : Go to step 21.

20. Audio-navigation unit check:
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Reconnect SRS unit connector A (39P).
    - 3. Disconnect the following connector.

      Audio-navigation unit connector B (20P)

    - 4. Turn the ignition switch to ON (II), and read the HDS.

    Does the HDS identify the vehicle?

    YES : REPLACE THE AUDIO-NAVIGATION UNIT .

GETtheMANUALS.org

NO : Go to step 21.

21. TPMS control unit check:
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Reconnect the audio-navigation unit connector B (20P).
    - 3. Disconnect the following connector.

      TPMS control unit 20P connector

    - 4. Turn the ignition switch to ON (II) and read the HDS.

    Does the HDS identify the vehicle?

    YES : **REPLACE THE TPMS CONTROL UNIT** .

    NO : **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then recheck. If the HDS identifies the vehicle and the PCM was updated, troubleshooting is complete. If the HDS identifies the vehicle and the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** .

- **Internal error DTCs**
- **Loss of communication DTCs**
- **Signal error DTCs**

MICU

DTC	Description	DTC type

GETtheMANUALS.org

B1002	MICU internal (EEPROM) error	Internal error
B1003	MICU program update error	Internal error
B1026	Passenger's door lock switch malfunction	Signal error
B1028	Rear wiper auto stop switch malfunction	Signal error
B1036	IG1 power supply circuit malfunction	Signal error
B1077	Wiper switch (As) malfunction	Signal error
B1079	Daytime running light malfunction	Signal error
B1127	Driver's door key cylinder switch input circuit malfunction (Simultaneous input of lock and unlock signal)	Signal error
B1128	Driver's door remote switch input circuit malfunction (Simultaneous input of lock and unlock signal)	Signal error
B1129	Driver's door lock knob switch input circuit malfunction (Simultaneous input of lock and unlock signal)	Signal error
B1275	Headlight switch OFF position circuit malfunction	Signal error
B1276	Headlight switch PARKING position circuit malfunction	Signal error
B1277	Headlight switch AUTO position circuit malfunction	Signal error
B1278	Headlight switch ON position circuit malfunction	Signal error
B1279	Dimmer switch circuit malfunction	Signal error
B1280	Turn signal switch circuit malfunction	Signal error
B1281	Front wiper MIST position circuit malfunction	Signal error
B1282	Front wiper INT (AUTO) position circuit malfunction	Signal error
B1283	Front wiper LOW position circuit malfunction	Signal error
B1284	Front wiper HIGH position circuit malfunction	Signal error
U1280	Communication bus line error (BUS-OFF)	Loss of communication
U128D	MICU lost communication with gauge control module	Loss of communication

GAUGE CONTROL MODULE

DTC	Description	DTC type
B1175	Fuel level sensor (Fuel gauge sending unit) circuit malfunction	Signal error
B1176	Fuel level sensor (Fuel gauge sending unit) circuit short	Signal error
U0029	F-CAN communication line error	Loss of communication
U0100	Gauge control module lost communication with PCM	Loss of communication
U0114	Gauge Control Module Lost Communication With Real Time AWD Control Unit	Loss of communication
U0122	Gauge control module lost communication with VSA modulator-control unit (VSA message)	Loss of communication
U0127	Gauge control module lost communication with TPMS control unit (TPMS message)	Loss of communication
		Loss of

GETtheMANUALS.org

U0131	Gauge control module lost communication with EPS control unit	communication
U0151	Gauge control module lost communication with SRS unit (SRS message)	Loss of communication
U1280	Gauge control module communication bus line error (BUS-OFF)	Loss of communication
U1281	Gauge control module lost communication with MICU (MICU frame)	Loss of communication
U3000-49	Gauge control module internal circuit error	Loss of communication

CLIMATE CONTROL

DTC	Description	DTC type
B121A	An open in the mode control motor circuit	Signal error
B121B	A short in the mode control motor circuit	Signal error
B121D	Humidity/in-car temperature sensor communication error	Signal error
B1220	A short in the recirculation control motor circuit	Signal error
B1227	An open in the outside air temperature sensor circuit	Signal error
B1228	A short in the outside air temperature sensor circuit	Signal error
B1229	An open in the sunlight sensor circuit	Signal error
B1230	A short in the sunlight sensor circuit	Signal error
B1231	An open in the evaporator temperature sensor circuit	Signal error
B1232	A short in the evaporator temperature sensor circuit	Signal error
B1233	An open in the air mix control motor circuit (driver's)	Signal error
B1234	A short in the air mix control motor circuit (driver's)	Signal error
B1235	A problem in the air mix control motor circuit, linkage, door, or motor (driver's)	Signal error
B1236	An open in the passenger's air mix control motor circuit	Signal error
B1237	A short in the passenger's air mix control motor circuit	Signal error
B1238	A problem in the passenger's air mix control motor circuit, linkage, door, or motor	Signal error
B1240	A problem in the mode control motor circuit, linkage, door, or motor	Signal error
B1241	A problem in the blower motor circuit	Signal error
B2969	Climate control unit lost communication with MICU (WIPSW message)	Loss of communication
B2983	A problem in the recirculation control motor circuit, linkage, door, or motor	Signal error
B2986	An open in the recirculation control motor circuit	Signal error
U1280	Communication bus line error (BUS-OFF)	Loss of communication
U128D	Lost communication with gauge control module (climate control unit)	Loss of communication

AUTOMATIC LIGHTING/SUNLIGHT SENSOR

GETtheMANUALS.org

DTC	Description	DTC type
B1575	Auto light sensor malfunction	Signal error
U1280	Automatic lighting/sunlight sensor communication bus line error (BUS-OFF)	Loss of communication
U1281	Automatic lighting/sunlight sensor lost communication with MICU	Loss of communication
U128D	Automatic lighting/sunlight sensor lost communication with gauge control module	Loss of communication

IMMOBILIZER-KEYLESS CONTROL UNIT

DTC	Description	DTC type
U1280	Immobilizer-keyless control unit communication bus line error (BUS-OFF)	Loss of communication
U1281	Immobilizer-keyless control unit lost communication with MICU (MICU frame)	Loss of communication
U128D	Immobilizer-keyless control unit lost communication with gauge control module	Loss of communication

ENTRY LIGHTS CONTROL SYSTEM (MICU) INPUT TEST

NOTE:

- **Refer to the Electrical Wiring Diagrams for the location of the under-dash fuse/relay box connectors.**
- **Before testing, make sure the No. A28 (7.5 A) and No. A29 (10 A) fuses in the under-hood fuse/relay box are OK.**
- **Before testing, make sure the No. B5 (10 A) fuse in the under-dash fuse/relay box is OK.**

1. Turn the ignition switch to LOCK (0).
2. **DISCONNECT UNDER-DASH FUSE/RELAY BOX CONNECTORS B, D, N, P, W, AND X** .

NOTE: **All connector views are shown from the wire side of the female terminals.**

3. Inspect the connector and socket terminals to be sure they are all making good contact:
   - If the terminals are bent, loose, or corroded, repair them as necessary, and recheck the system.
   - If the terminals are OK, go to step **4** .
4. With the connectors still disconnected, do the following input tests:
   - If any test indicates a problem, find and correct the cause, then recheck the system.
   - If all the input tests prove OK, go to step **5** .

Cavity	Wire	Test condition	Test: Desired result	Possible cause if desired result is not obtained
P12	LT GRN	Under all conditions	Connect terminal P12 and body ground with a jumper wire: The ignition key light should come on.	• Blown No. A28 (7.5 A) fuse in the under-hood fuse/relay box • Faulty ignition key switch • An open or high resistance in the wire
W3 N6	PNK PUR	Ceiling light switch in middle position and front individual map light switch in OFF position and interior light switch in DOOR position	Connect terminal W3 to ground, and terminal N6 to ground with jumper wires: The ceiling light and front individual map lights should come on.	• Blown No. A28 (7.5 A) fuse in the under-hood fuse/relay box • Blown bulb • Faulty ceiling light • Faulty front individual map lights • Faulty interior light switch • Faulty interior lights cut relay • An open or high resistance in the wire

5. Reconnect the connectors to the under-dash fuse/relay box; do the following input tests:
   - If any test indicates a problem, find and correct the cause, then recheck the system.

GETtheMANUALS.org

- If all the input tests prove OK, the MICU must be faulty; **REPLACE THE UNDER-DASH FUSE/RELAY BOX** .

Cavity	Wire	Test condition	Test: Desired result	Possible cause if desired result is not obtained
W3 B39	PNK ORN	Under all conditions	Connect terminal W3 to ground, and terminal B39 to ground with jumper wires: The cargo area light should come on.	• Blown No. A28 (7.5 A) fuse in the under-hood fuse/relay box • Blown bulb • Faulty cargo area light • Faulty interior lights cut relay • Faulty under-dash fuse/relay box • An open or high resistance in the wire
D17	RED	Under all conditions	Measure the voltage to ground: There should be battery voltage.	• Blown No. A29 (10 A) fuse in the under-hood fuse/relay box • An open or high resistance in the wire
W6	BLK	Under all conditions	Measure the voltage to ground: There should be less than 0.2 V.	• Poor ground (G501) • An open or high resistance in the ground wire
B32	BLK	Under all conditions	Measure the voltage to ground: There should be less than 0.2 V.	• Poor ground (G604) • An open or high resistance in the ground wire
B20	BLK	Under all conditions	Measure the voltage to ground: There should be less than 0.2 V.	• Poor ground (G604) • An open or high resistance in the ground wire
D10	BLK	Under all conditions	Measure the voltage to ground: There should be less than 0.2 V.	• Poor ground (G402) • An open or high resistance in the ground wire
		Driver's door open	Measure the voltage to ground: There should be less than 0.2 V.	• Faulty driver's door switch • Faulty driver's door switch ground

GETtheMANUALS.org

B40	GRN			• An open or high resistance in the wire
		Driver's door closed	Measure the voltage to ground: There should be about 5 V.	• Faulty driver's door switch • A short to ground in the wire
B29	BRN	Front passenger's door open	Measure the voltage to ground: There should be less than 0.2 V.	• Faulty front passenger's door switch • Faulty front passenger's door switch ground • An open or high resistance in the wire
		Front passenger's door closed	Measure the voltage to ground: There should be about 5 V.	• Faulty front passenger's door switch • A short to ground in the wire
B33	WHT	Left rear door open	Measure the voltage to ground: There should be less than 0.2 V.	• Faulty left rear door switch • Faulty left rear door switch ground • An open or high resistance in the wire
		Left rear door closed	Measure the voltage to ground: There should be about 5 V.	• Faulty left rear door switch • A short to ground in the wire
B34	GRY	Right rear door open	Measure the voltage to ground: There should be less than 0.2 V.	• Faulty right rear door switch • Faulty right rear door switch ground • An open or high resistance in the wire
		Right rear door closed	Measure the voltage to ground: There should be about 5 V.	• Faulty right rear door switch • An open or high resistance in the wire
		Driver's door lock knob switch in LOCK	Measure the voltage to ground: There should be less than 0.2 V.	• Faulty driver's door lock knob switch • Poor ground (G501) or an open in the ground wire

GETtheMANUALS.org

X5	LT GRN			• An open or high resistance in the wire
		Driver's door lock knob switch in UNLOCK	Measure the voltage to ground: There should be about 5 V.	• Faulty driver's door lock knob switch • A short to ground in the wire
X4	WHT	Driver's door lock knob switch in UNLOCK	Measure the voltage to ground: There should be less than 0.2 V.	• Faulty driver's door lock knob switch • Poor ground (G501) or an open in the ground wire • An open or high resistance in the wire
		Driver's door lock knob switch in LOCK	Measure the voltage to ground: There should be about 5 V.	• Faulty driver's door lock knob switch • A short to ground in the wire
B22	PNK	Tailgate open	Measure the voltage to ground: There should be less than 0.2 V.	• Faulty tailgate latch switch • Poor ground (G603) or an open in the ground wire • An open or high resistance in the wire
		Tailgate closed	Measure the voltage to ground: There should be about 5 V.	• Faulty tailgate latch switch • A short to ground in the wire
P11	GRY	Ignition key inserted into the ignition key cylinder	Measure the voltage to ground: There should be less than 0.2 V.	• Faulty ignition key switch • Poor ground (G502) or an open in the ground wire • An open or high resistance in the wire
		Ignition switch LOCK (0) position, and the ignition key removed from the ignition key cylinder	Measure the voltage to ground: There should be about 5 V.	• Faulty ignition key switch • A short to ground in the wire

EXTERIOR LIGHTS (MICU) INPUT TEST

GETtheMANUALS.org

NOTE:

- **Refer to the Electrical Wiring Diagrams for the location of the under-dash fuse/relay box connectors.**
- **Before testing, make sure the No. A16 (10 A), No. A24 (10 A), No. A25 (10 A), No. A26 (20 A), and No. A29 (10 A) fuses in the under-hood fuse/relay box are OK.**
- **Before testing, make sure the No. B5 (10 A), No. B34 (7.5 A), No. B38 (10 A), and No. B39 (10 A) fuses in the under-dash fuse/relay box are OK.**

1. Turn the ignition switch to LOCK (0).
2. **DISCONNECT UNDER-DASH FUSE/RELAY BOX CONNECTORS B, C, D, P, T, AND W** .

NOTE: **All connector views are shown from the wire side of the female terminals.**

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Inspect the connector and socket terminals to be sure they are all making good contact:
   - If the terminals are bent, loose, or corroded, repair them as necessary, and recheck the system.
   - If the terminals are OK, go to step **4** .
4. With the connectors still disconnected, do the following input tests:
   - If any test indicates a problem, find and correct the cause, then recheck the system.
   - If all the input tests prove OK, go to step **5** .

Cavity	Wire	Test condition	Test: Desired result	Possible cause if desired result is not obtained
C19 C12	LT GRN PUR	Connect terminal C19 and ground with a jumper wire	Measure the voltage between terminal C12 and ground: There should be battery voltage.	• Faulty relay circuit board • An open or high resistance in the wire

GETtheMANUALS.org

D16	BLU	Under all conditions	Connect terminal to ground with a jumper wire: The headlights (low beam) should come on.	• Faulty relay circuit board • Blown bulb • Poor ground (G301) or an open in the ground wire • An open or high resistance in the wire
C18 C1	WHT ORN	Under all conditions	Connect terminals C18 and C1 with a jumper wire: The left headlight (high beam) should come on.	• Blown bulb • Poor ground (G301) or an open in the ground wire • An open or high resistance in the wire
C14 C1	YEL ORN	Under all conditions	Connect terminals C14 and C1 with a jumper wire: The right headlight (high beam) should come on.	• Blown bulb • Poor ground (G301) or an open in the ground wire • An open or high resistance in the wire

5. Reconnect the connectors to the under-dash fuse/relay box, do the following input tests:
   - If any test indicates a problem, find and correct the cause, then recheck the system.
   - If all the input tests prove OK, the MICU must be faulty; **REPLACE THE UNDER-DASH FUSE/RELAY BOX** .

Cavity	Wire	Test condition	Test: Desired result	Possible cause if desired result is not obtained
D17	RED	Under all conditions	Measure the voltage to ground: There should be battery voltage.	• Blown No. A29 (10 A) fuse in the under-hood fuse/relay box • An open or high resistance in the wire
C1	ORN	Under all conditions	Measure the voltage to ground: There should be battery voltage.	• Blown No. A2-4 (30 A) fuse in the under-hood fuse/relay box • An open or high resistance in the wire
W6	BLK	In all ignition switch positions	Measure the voltage to ground: There should be less than 0.2 V.	• Poor ground (G501) • An open or high resistance in the ground wire

GETtheMANUALS.org

B32	BLK	In all ignition switch positions	Measure the voltage to ground: There should be less than 0.2 V.	• Poor ground (G604) • An open or high resistance in the ground wire
B20	BLK	In all ignition switch positions	Measure the voltage to ground: There should be less than 0.2 V.	• Poor ground (G604) • An open or high resistance in the ground wire
D10	BLK	In all ignition switch positions	Measure the voltage to ground: There should be less than 0.2 V.	• Poor ground (G402) • An open or high resistance in the ground wire
P11	GRY	Ignition key inserted into the ignition key cylinder	Measure the voltage to ground: There should be less than 0.2 V.	• Faulty ignition key switch • Poor ground (G502) or an open in the ground wire • An open or high resistance in the wire
		Ignition switch LOCK (0) position, and the ignition key removed from the ignition key cylinder	Measure the voltage to ground: There should be about 5 V.	• Faulty ignition key switch • A short to ground in the wire
T1 T5	ORN BLK	Combination light switch OFF	Measure the voltage between terminals T1 and T5: There should be less than 0.2 V.	• Faulty combination light switch • An open or high resistance in the wire
		Combination light switch in any position other than OFF	Measure the voltage between terminals T1 and T5: There should be about 5 V.	• Faulty combination light switch • A short to ground in the wire
T3 T5	BLU BLK	Combination light switch (PARKING position) ON	Measure the voltage between terminals T3 and T5: There should be less than 0.2 V.	• Faulty combination light switch • An open or high resistance in the wire
		Combination light switch OFF	Measure the voltage between terminals T3 and T5: There should be about 5 V.	• Faulty combination light switch • A short to ground in the wire
		Combination light switch	Measure the voltage between terminals T2 and	• Faulty combination light switch

GETtheMANUALS.org

T2 T5	WHT BLK	(headlight) ON	T5: There should be less than 0.2 V.	• An open or high resistance in the wire
		Combination light switch OFF	Measure the voltage between terminals T2 and T5: There should be about 5 V.	• Faulty combination light switch • A short to ground in the wire
T11 T5	RED BLK	Combination light switch lever pulled (Passing)	Measure the voltage between terminals T11 and T5: There should be less than 0.2 V.	• Faulty combination light switch • An open or high resistance in the wire
		Combination light switch lever released (OFF)	Measure the voltage between terminals T11 and T5: There should be about 5 V.	• Faulty combination light switch • A short to ground in the wire
T12 T5	LT BLU BLK	Combination light switch (Dimmer) in high beam position	Measure the voltage between terminals T12 and T5: There should be less than 0.2 V.	• Faulty combination light switch • An open or high resistance in the wire
		Combination light switch (Dimmer) in low beam position	Measure the voltage between terminals T12 and T5: There should be about 5 V.	• Faulty combination light switch • A short to ground in the wire

FOG LIGHTS (MICU) INPUT TEST

NOTE:

- **Refer to the Electrical Wiring Diagrams for the location of the under-dash fuse/relay box connectors.**
- **Before testing, make sure that there is no DTC and the combination light switch circuit is OK.**
- **Before testing, make sure the No. A12 (20 A) and No. A29 (10 A) fuses in the under-hood fuse/relay box are OK.**
- **Before testing, make sure the No. B5 (10 A) fuse in the under-dash fuse/relay box is OK.**

1. Turn the ignition switch to LOCK (0).
2. **DISCONNECT UNDER-DASH FUSE/RELAY BOX CONNECTORS B, D, T, AND W** .

NOTE: **All connector views are shown from the wire side of the female terminals.**

3. Inspect the connector and socket terminals to be sure they are all making good contact:
   - If the terminals are bent, loose, or corroded, repair them as necessary, and recheck the system.
   - If the terminals are OK, go to step **4** .
4. With the connector still disconnected, do the following input tests:
   - If any test indicates a problem, find and correct the cause, then recheck the system.
   - If all the input tests prove OK, go to step **5** .

Cavity	Wire	Test condition	Test: Desired result	Possible cause if desired result is not obtained
D25	LT GRN	Under all conditions	Connect terminal to ground with a jumper wire: The fog lights should come on.	• Blown No. A12 (20 A) fuse in the under-hood fuse/relay box • Blown bulb(s) • Faulty under-hood fuse/relay box • Faulty fog light relay • An open or high resistance in the wire

5. Reconnect the connectors to the under-dash fuse/relay box; do the following input tests:
   - If any test indicates a problem, find and correct the cause, then recheck the system.
   - If all the input tests prove OK, the MICU must be faulty; **REPLACE THE UNDER-DASH FUSE/RELAY BOX** .

Cavity	Wire	Test condition	Test: Desired result	Possible cause if desired result is not obtained
D17	RED	Under all conditions	Measure the voltage to ground: There should be battery voltage.	• Blown No. A29 (10 A) fuse in the under-hood fuse/relay box • An open or high resistance in the wire
W6	BLK	In all ignition switch positions	Measure the voltage to ground: There should be less than 0.2 V.	• Poor ground (G501) • An open or high resistance in the ground wire
B32	BLK	In all ignition switch positions	Measure the voltage to ground: There should be less than 0.2 V.	• Poor ground (G604) • An open or high resistance in the ground wire
B20	BLK	In all ignition switch positions	Measure the voltage to ground: There should be less than 0.2 V.	• Poor ground (G604) • An open or high resistance in the ground wire

GETtheMANUALS.org

D10	BLK	In all ignition switch positions	Measure the voltage to ground: There should be less than 0.2 V.	• Poor ground (G402) • An open or high resistance in the ground wire
T4 T5	PUR BLK	Fog light switch ON	Measure the voltage between terminals T4 and T5: There should be less than 0.2 V.	• Faulty combination light switch • An open or high resistance in the wire
		Fog light switch OFF	Measure the voltage between terminals T4 and T5: There should be about 5 V.	• Faulty combination light switch • A short to ground in the wire

KEYLESS/POWER DOOR LOCKS/SECURITY SYSTEM (MICU) INPUT TEST

NOTE:

- **Refer to the Electrical Wiring Diagrams for the location of the under-dash fuse/relay box connectors.**
- **Before testing, make sure the No. A29 (10 A) fuse in the under-hood fuse/relay box is OK.**
- **Before testing, make sure the No. B5 (10 A), No. B8 (15 A), No. B9 (10 A), No. B15 (10 A), No. B30 (10 A), No. B32 (15 A), No. B33 (15 A), and No. B41 (20 A) fuses in the under-dash fuse/relay box are OK.**
- **Before testing, make sure the headlights, parking lights, side marker lights, taillights, and horn(s) all work properly.**
- **There are two pairs of fuses in the same circuit (No. B8 and No. B32 fuses, No. B9 and No. B33 fuses, and No. B15 and No. B30 fuses). If one fuse is blown, make sure to check the other fuse in the same circuit. If necessary, replace the blown fuse(s).**

1. Turn the ignition switch to LOCK (0).
2. **DISCONNECT UNDER-DASH FUSE/RELAY BOX CONNECTORS B, C, D, N, P, R, S, W, AND X** .

NOTE: **All connector views are shown from the wire side of the female terminals.**

3. Inspect the connector and socket terminals to be sure they are all making good contact:
   - If the terminals are bent, loose, or corroded, repair them as necessary, and recheck the system.
   - If the terminals are OK, go to step **4** .
4. With the connectors still disconnected, do the following input tests:
   - If any test indicates a problem, find and correct the cause, then recheck the system.
   - If all the input tests prove OK, go to step **5** .

NOTE: These are door lock actuator operation tests for keyless entry.

Cavity	Wire	Test condition	Test: Desired result	Possible cause if desired result is not obtained

GETtheMANUALS.org

N10	PNK	Connect terminals D2[1] and N10 (or N12), and terminal N12 (or N10) and ground with jumper wires.	Check actuator operation: The driver's door lock actuator should LOCK (or UNLOCK).	• Faulty driver's door lock actuator • An open or high resistance in the wire
N12	GRY			
S3	RED	Connect terminals D2[1] and S3 (or S1), and terminal S1 (or S3) and ground with jumper wires.	Check actuator operation: The front passenger's door lock actuator should LOCK (or UNLOCK).	• Faulty front passenger's door lock actuator • An open or high resistance in the wire
S1	YEL			
B16	PNK	Connect terminals D2[1] and B16 (or B11), and terminal B11 (or B16) and ground with jumper wires.	Check actuator operation: The left rear door lock actuator should LOCK (or UNLOCK).	• Faulty left rear door lock actuator • An open or high resistance in the wire
B11	PUR			
B18	LT GRN	Connect terminals D2[1] and B18 (or B9), and terminal B9 (or B18) and ground with jumper wires.	Check actuator operation: The right rear door lock actuator should LOCK (or UNLOCK).	• Faulty right rear door lock actuator • An open or high resistance in the wire
B9	YEL			
B7	YEL	Connect terminals D2[1] and B7 with a jumper wire momentarily.	Check actuator operation: The tailgate release actuator should work.	• Faulty tailgate release actuator • Poor ground (G603) or an open in the ground wire • An open or high resistance in the wire
[1] Use a fused jumper wire with an appropriate amperage fuse.				

5. Reconnect the connectors to the under-dash fuse/relay box; do the following input tests:
   - If any test indicates a problem, find and correct the cause, then recheck the system.
   - If all the input tests prove OK, the MICU must be faulty; **REPLACE THE UNDER-DASH FUSE/RELAY BOX** .

Cavity	Wire	Test condition	Test: Desired result	Possible cause if desired result is not obtained
D17	RED	Under all conditions	Measure the voltage to ground: There should be battery voltage.	• Blown No. A29 (10 A) fuse in the under-hood fuse/relay box • An open or high

GETtheMANUALS.org

				resistance in the wire
D2	BLU	Under all conditions	Measure the voltage to ground: There should be battery voltage.	• Blown No. A2-2 (60 A) fuse in the under-hood fuse/relay box • An open or high resistance in the wire
W6	BLK	In all ignition switch positions	Measure the voltage to ground: There should be less than 0.2 V.	• Poor ground (G501) • An open or high resistance in the ground wire

[1] With security [2] If the factory-installed audio unit is removed from the vehicle, this voltage will be between 10-12 V.				

MICU INPUT TEST

NOTE:

- **Refer to the Electrical Wiring Diagrams for the location of the under-dash fuse/relay box connectors.**
- **Before testing, check for DTCs. If any DTCs are indicated, troubleshoot those DTCs first.**

1. Turn the ignition switch to LOCK (0).
2. **DISCONNECT UNDER-DASH FUSE/RELAY BOX CONNECTORS B, D, K, M, P, Q, AND W** .

NOTE: **All connector views are shown from the wire side of the female terminals.**

3. Inspect the connector and socket terminals to be sure they are all making good contact:
   - If the terminals are bent, loose, or corroded, repair them as necessary, and recheck the system.
   - If the terminals are OK, go to step **4** .
4. With the connectors still disconnected, do the following input tests:
   - If any test indicates a problem, find and correct the cause, then recheck the system.
   - If all the input tests prove OK, go to step **5** .

Cavity	Wire	Test condition	Test: Desired result	Possible cause if desired result is not obtained
K1	BLU	Disconnect the immobilizer-keyless control unit 7P connector	Check for continuity between terminal K1 and immobilizer-keyless control unit 7P connector terminal No. 5: There should be continuity.	An open in the B-CAN wire
K2	PNK		Check for continuity between terminal K2 and immobilizer-keyless control unit 7P connector terminal No. 4: There should be continuity.	
K1	BLU	Disconnect the gauge control module 32P connector	Check for continuity between terminal K1 and gauge control module 32P connector terminal No. 31: There should be continuity.	An open in the B-CAN wire
K2	PNK		Check for continuity between terminal K2 and gauge control module 32P connector terminal No. 30: There should be continuity.	
K1(1)	BLU	Disconnect the climate control unit 32P connector	Check for continuity between terminal K1 and climate control unit 32P connector terminal No. 15: There should be continuity.	An open in the B-CAN wire
K2(1)	PNK		Check for continuity between terminal K2 and climate control unit 32P connector terminal No. 16: There should be continuity.	
K1(2)	BLU	Disconnect the automatic lighting/sunlight sensor 7P connector	Check for continuity between terminal K1 and automatic lighting/sunlight sensor 7P connector terminal No. 7: There should be continuity.	An open in the B-CAN wire
K2(2)	PNK		Check for continuity between terminal K2 and automatic lighting/sunlight sensor 7P connector terminal No. 6: There should be continuity.	
K1(3)	BLU	Disconnect audio-navigation unit connector E (16P)	Check for continuity between terminal K1 and audio-navigation unit connector E (16P) terminal No. 9: There should be continuity.	An open in the B-CAN wire
K2(3)	PNK		Check for continuity between terminal K2 and audio-navigation unit connector E (16P) terminal No. 1: There should be continuity.	

GETtheMANUALS.org

K1(4)	BLU	Disconnect audio unit connector B (20P)	Check for continuity between terminal K1 and audio unit connector B (20P) terminal No. 3: There should be continuity.	An open in the B-CAN wire
K2(4)	PNK		Check for continuity between terminal K2 and audio unit connector B (20P) terminal No. 13: There should be continuity.	
K1(5)	BLU	Disconnect the multi-information display unit connector A (32P)	Check for continuity between terminal K1 and multi-information display unit connector A (32P) terminal No. 15: There should be continuity.	An open in the B-CAN wire
K1(5)	PNK		Check for continuity between terminal K2 and multi-information display unit connector A (32P) terminal No. 31: There should be continuity.	
Q14	LT BLU	Under all conditions	Check for continuity between terminal Q14 and data link connector (DLC) terminal No. 7: There should be continuity.	An open in the K-LINE wire

(2) With automatic lighting

(3) With navigation

(4) Without navigation

(5) With multi-information display unit

5. Reconnect the connectors to the under-dash fuse/relay box; do the following input tests:
   - If any test indicates a problem, find and correct the cause, then recheck the system.
   - If all the input tests prove OK, the MICU must be faulty; **REPLACE THE UNDER-DASH FUSE/RELAY BOX** .

NOTE: These are power and ground tests for the MICU.

Cavity	Wire	Test condition	Test: Desired result	Possible cause if desired result is not obtained
D17	RED	Under all conditions	Measure the voltage to ground: There should be battery voltage.	• Blown No. A29 (10 A) fuse in the under-hood fuse/relay box • An open or high resistance in the wire
K7	RED	Under all conditions	Measure the voltage to ground: There should be battery voltage.	• Blown No. A29 (10 A) fuse in the under-hood fuse/relay box • Faulty under-dash fuse relay box • An open or high resistance in

GETtheMANUALS.org

				the wire
M7	LT GRN	Ignition switch ON (II)	Measure the voltage to ground: There should be battery voltage.	• Blown No. B5 (10 A) fuse in the under-dash fuse/relay box • An open or high resistance in the wire
P18	BLU	Ignition switch ON (II)	Measure the voltage to ground: There should be battery voltage.	• Blown No. B4 (15 A) fuse in the under-dash fuse/relay box • An open or high resistance in the wire
Q2	PNK	Ignition switch ON (II)	Measure the voltage to ground: There should be battery voltage.	• Blown No. B22 (7.5 A) fuse in the under-dash fuse/relay box • An open or high resistance in the wire
Q9	RED	Under all conditions	Measure the voltage to ground: There should be battery voltage.	• Blown No. B25 (10 A) fuse in the under-dash fuse/relay box • An open or high resistance in the wire
Q16	RED	Under all conditions	Measure the voltage to ground: There should be battery voltage.	• Blown No. A29 (10 A) fuse in the under-hood fuse/relay box • Faulty under-dash fuse relay box • An open or high resistance in the wire
B20	BLK	In all ignition switch positions	Measure the voltage to ground: There should be less than 0.2 V.	• Poor ground (G604) • An open or high resistance in the ground wire
B32	BLK	In all ignition switch positions	Measure the voltage to ground: There should be less than 0.2 V.	• Poor ground (G604) • An open or high resistance in the ground wire
D10	BLK	In all ignition switch positions	Measure the voltage to ground: There should be less than 0.2 V.	• Poor ground (G402) • An open or high resistance in the ground wire
W6	BLK	In all ignition switch positions	Measure the voltage to ground: There should be less than 0.2 V.	• Poor ground (G501) • An open or high resistance in the ground wire

MULTIPLEX INTEGRATED CONTROL SYSTEM SLEEP AND WAKE-UP MODE TEST

1. Shift to the sleep mode:

GETtheMANUALS.org

Close all doors. Turn the ignition switch to LOCK (0), remove the key, then open and close the driver's door. If the MICU receives no signals from the inputs listed below, it will go into sleep mode in less than 40 seconds.

- IG1 power supply
- IG2 power supply
- B-CAN data
- Hazard warning switch (OFF)

2. Confirm sleep mode:

NOTE: Check the official Honda service website for more service information about parasitic draw at the battery.

Check the parasitic draw at the battery while entering sleep mode; amperage should change from about 200 mA to less than 35 mA in less than 40 seconds.

3. Shift to wake-up mode:

When the ignition switch is turned to ON (II), the MICU, the gauge control module, the immobilizer-keyless control unit, and the PCM will wake-up at the same time without "talking" to each other through the communication lines. When any switch in the multiplex integrated control system is turned on, it wakes up its related control unit which, in turn, wakes up the other units. After confirming the system is in sleep mode, look in the following list for the switch most related to the problem. Operate that switch and see if its control unit wakes up.

NOTE: If any control unit is faulty and does not wake up, several circuits in the system malfunction at the same time. Below is a list of the switches and input signals that wake them up.

- IG1 power supply
- IG2 power supply
- ACC power supply
- B-CAN data
- Driver's door switch (Open)
- Left rear door switch (Open)
- Tailgate latch switch (Open)
- Tailgate outer handle switch (Open)
- Left rear door lock knob switch (UNLOCK)
- Security hood switch (Open)
- Hazard warning switch (ON)
- Combination light switch (Parking, Headlight, Dimmer, Passing, Fog ON)
- Ignition key switch (Key inserted)

GETtheMANUALS.org

- Driver's door key cylinder switch (LOCK/UNLOCK)
- Driver's door lock knob switch (LOCK/UNLOCK)
- Right rear door lock knob switch (UNLOCK)
- Front passenger's door lock knob switch (UNLOCK)
- Driver's door lock switch (LOCK/UNLOCK)
- Front passenger's door lock switch (LOCK/UNLOCK)
- Front passenger's door switch (Open)
- Right rear door switch (Open)
- Audio security switch (ON)

TURN SIGNAL/HAZARD WARNING LIGHTS (MICU) INPUT TEST

NOTE:

- **Refer to the Electrical Wiring Diagrams for the location of the under-dash fuse/relay box connectors.**
- **Before testing, make sure the No. A15 (10 A) and No. A29 (10 A) fuses in the under-hood fuse/relay box are OK.**
- **Before testing, make sure the No. B5 (10 A) fuse in the under-dash fuse/relay box is OK.**

1. Turn the ignition switch to LOCK (0).
2. **DISCONNECT UNDER-DASH FUSE/RELAY BOX CONNECTORS B, C, D, M, R, T, AND W** .

NOTE: **All connector views are shown from the wire side of the female terminals.**

T6(1) T15	BLU BLK	Windshield wiper/washer switch (Intermittent dwell time controller) turned ON.	Measure the resistance between terminals T6 and T15: The resistance should vary between 0 to 1 kohms.	• Faulty windshield wiper/washer switch • An open or high resistance in the ground wire • A short to ground in the wire
C32	BLU	Run the windshield wiper motor by connecting terminals D4 and P9, and terminal C22 and body ground with jumper wires.	Connect terminal C32 to body ground with a jumper wire: The windshield wiper motor speed should change from high speed to low speed.	• Faulty windshield wiper motor • Faulty relay circuit board • An open or high resistance in the wire
C15 C6	ORN PNK	Under all conditions	Connect terminals C15 and D4, and terminal C6 to body ground with jumper wires: The windshield/rear window washer motor should run.	• Faulty windshield/rear window washer motor • An open or high resistance in the wire
C23	GRY	Run the windshield wiper motor by connecting terminals D4 and P9, and terminal C22 and body ground with jumper wires.	Use a DVOM to check for continuity to ground. **NOTE:** **There is no needle on a DVOM.**	• Faulty windshield wiper motor • An open or high resistance in the wire
P9 T20	LT BLU BRN	Under all conditions	Connect terminals D4 and P9, and terminal T20 to body ground with jumper wires: The rear window wiper motor should run.	• Faulty rear window wiper motor • An open or high resistance in the wire
(1) With intermittent dwell time controller				

5. Reconnect the connectors to the under-dash fuse/relay box, and do the following input tests:

GETtheMANUALS.org

- If any test indicates a problem, find and correct the cause, then recheck the system.
- If all the input tests prove OK, the MICU must be faulty; **REPLACE THE UNDER-DASH FUSE/RELAY BOX** .

Cavity	Wire	Test condition	Test: Desired result	Possible cause if desired result is not obtained
W6	BLK	In all ignition switch positions	Measure the voltage to ground: There should be less than 0.2 V.	• Poor ground (G501) • An open or high resistance in the ground wire
D10	BLK	In all ignition switch positions	Measure the voltage to ground: There should be less than 0.2 V.	• Poor ground (G402) • An open or high resistance in the ground wire
B32	BLK	In all ignition switch positions	Measure the voltage to ground: There should be less than 0.2 V.	• Poor ground (G604) • An open or high resistance in the ground wire
B20	BLK	In all ignition switch positions	Measure the voltage to ground: There should be less than 0.2 V.	• Poor ground (G604) • An open or high resistance in the ground wire
R7	BLK	In all ignition switch positions	Measure the voltage to ground: There should be less than 0.2 V.	• Poor ground (G501) • An open or high resistance in the ground wire
C16	BLU	Brake pedal pressed	Measure the voltage to ground: There should be battery voltage.	• Blown No. A16 (10 A) fuse in the under-hood fuse/relay box • Faulty brake pedal position switch • An open or high resistance in the wire
		Brake pedal released	Measure the voltage to ground: There should be no voltage.	• Faulty brake pedal position switch • A short to power in the wire
T16	ORN	Windshield wiper/washer switch (INT or LO) ON	Measure the voltage to ground: There should be less than 0.2 V.	• Faulty windshield wiper/washer switch • An open or high resistance in the wire
T15	BLK	Windshield wiper/washer switch OFF	Measure the voltage to ground: There should be about 5 V.	• Faulty windshield wiper/washer switch • A short to ground in the wire
		Windshield wiper/washer	Measure the voltage to	• Faulty windshield wiper/washer switch

GETtheMANUALS.org

T18 T15	GRN BLK	switch (MIST) ON	ground: There should be less than 0.2 V.	• An open or high resistance in the wire
		Windshield wiper/washer switch OFF	Measure the voltage to ground: There should be about 5 V.	• Faulty windshield wiper/washer switch • A short to ground in the wire
T17 T15	WHT BLK	Windshield wiper/washer switch (LO or HI) ON	Measure the voltage to ground: There should be less than 0.2 V.	• Faulty windshield wiper/washer switch • An open or high resistance in the wire
		Windshield wiper/washer switch OFF	Measure the voltage to ground: There should be about 5 V.	• Faulty windshield wiper/washer switch • A short to ground in the wire
T19 T15	YEL BLK	Windshield washer switch ON	Measure the voltage to ground: There should be less than 0.2 V.	• Faulty windshield wiper/washer switch • An open or high resistance in the wire
		Windshield washer switch OFF	Measure the voltage to ground: There should be about 5 V.	• Faulty windshield wiper/washer switch • A short to ground in the wire
T10 T15	PNK BLK	Rear window wiper switch ON	Measure the voltage to ground: There should be less than 0.2 V.	• Faulty rear window wiper/washer switch • An open or high resistance in the wire
		Rear window wiper switch OFF	Measure the voltage to ground: There should be about 5 V.	• Faulty rear window wiper/washer switch • A short to ground in the wire
T9 T15	LT BLU BLK	Rear window wiper switch INT	Measure the voltage to ground: There should be less than 0.2 V.	• Faulty rear window wiper/washer switch • An open or high resistance in the wire
		Rear window wiper switch OFF	Measure the voltage to ground: There should be about 5 V.	• Faulty rear window wiper/washer switch • A short to ground in the wire
T8 T15	GRY BLK	Rear window washer switch ON	Measure the voltage to ground: There should be less than 0.2 V.	• Faulty rear window wiper/washer switch • An open or high resistance in the wire
		Rear window washer switch OFF	Measure the voltage to ground: There should be about 5 V.	• Faulty rear window wiper/washer switch • A short to ground in the wire

GETtheMANUALS.org

D22	YEL	Transmission range switch in P	Measure the voltage to ground: There should be less than 0.2 V.	• Faulty or improperly adjusted transmission range switch • Poor ground (G101) or an open in the ground wire • An open or high resistance in the wire
		Transmission range switch in any other position than P	Measure the voltage to ground: There should be about 5 V.	• Faulty or improperly adjusted transmission range switch • A short to ground in the wire

GETtheMANUALS.org

HOW TO TROUBLESHOOT THE NAVIGATION SYSTEM

HOW TO TROUBLESHOOT THE NAVIGATION SYSTEM

General Operation

Refer to the Navigation Manual for the navigation system operating procedures.

Anti-Theft Feature

The navigation system has an auto anti-theft protection circuit. When any of these actions occur, the unit enters its anti-theft mode:

- Disconnecting the battery.
- Disconnecting audio-navigation unit connector A (24P) or connector B (20P).
- Removing the No. A1-6 (100 A) fuse or the No. A29 (10 A) fuse from the under-hood fuse/relay box.

After service, reconnect power to the audio-navigation unit, and turn the ignition switch to ON (II). There are two ways to exit the anti-theft mode:

- Press and hold the VOLUME/POWER ( ) knob for at least 2 seconds. The audio-navigation unit automatically exits the anti-theft mode. If the audio-navigation unit does not exit anti-theft mode, like in cases where a known-good unit (including the SD module) was substituted for testing, enter the anti-theft code.
- Enter the 5-digit anti-theft code.

If the code is lost or unavailable, you can get the code from the Interactive Network (iN) using the audio-navigation unit serial number. The serial number can easily be obtained without removing the audio-navigation unit. To get the serial number and the code, do the following:

- Press and hold the MAP/GUIDE, the DEST, and the CANCEL buttons at the same time.
- At the select diagnosis items screen, select the Detail Information & Setting, select the Unit Check, then the Navi ECU. The system runs a brief diagnosis, then the audio-navigation unit serial number is displayed.
- Use the anti-theft code inquiry option on the iN to look up the 5-digit anti-theft code. The iN may display more than one code for a given serial number. This is because serial numbers are not unique. You may have to try more than one 5-digit code. If no code is shown, or if the code(s) given do not work in the audio-navigation unit, contact the Automobile Warranty department.

When replacing the audio-navigation unit, be sure to give the customer the new anti-theft security code.

Symptom Diagnosis

GETtheMANUALS.org

Certain circumstances and system limitations may result in occasional vehicle positioning errors. Some customers may think this indicates a problem with the navigation system when, in fact, the system is normal. Keep the following items in mind when interviewing customers about symptoms of the navigation system.

Self-Inertial Navigation Limitations

The limitations of the self-inertial portion of the navigation system (the gyro and the vehicle speed signal) can cause discrepancies between the vehicle's actual position and the indicated vehicle's position (GPS vehicle position).

The following circumstances may cause vehicle positioning errors:

- Moving the vehicle with the engine stopped and the vehicle stopped, such as by ferry or tow truck, or if the vehicle is spun on a turn table.
- Tire slippage, changes in tire rolling diameters, and some driving situations may cause discrepancies in travel distances. Examples of this include;
    - Continuous tire slippage on a slippery surface
    - Driving with snow chains mounted
    - Abnormal tire pressure
    - Incorrect tire size
    - Frequent lane changes across a wide highway
    - Very bumpy roads
- Tolerances in the system and map inaccuracies sometimes limit how precisely the vehicle's position is indicated. Examples of this include;
    - Driving on roads not shown on the map (map matching is not possible)
    - Driving on a road that winds in one direction, such as a loop bridge, an interchange, or a spiral parking garage
    - Driving on a road with a series of sharp hair-pin turns
    - Driving near a gradual highway exit or transition
    - Driving on one of two close parallel roads
    - Making many 90 degree turns

Global Positioning System (GPS) Limitations

The GPS cannot detect the vehicle's position or elevation during the following instances:

- For the first 5 to 10 minutes after reconnecting the battery (this process can take as long as 45 minutes).
- When the satellite signals are blocked by tall buildings, mountains, tunnels, large trees, inside parking structures or large trucks.
- When the GPS antenna is blocked by metallic window tinting or by an object placed above it in the vehicle. The GPS antenna requires a clear unobstructed view of the sky.
- When there is no satellite signal output (signal output is sometimes stopped for satellite servicing).
- When the satellite signals are blocked by the operation of some electronic aftermarket accessories

GETtheMANUALS.org

including, but not limited to non- OEM in-dash entertainment units (amp, CD players/changers, radar detectors, theft recovery systems, etc.) and cell phones placed near the navigation system.

The accuracy of the GPS is reduced during these instances:

- Metallic window tinting above the GPS antenna.
- When only three or fewer satellite signals are received (Four satellite signals are required for accurate positioning).
- When driving near high tension power lines.
- When the satellite signals are blocked by the operation of some electronic aftermarket accessories including, but not limited to non-OEM in-dash entertainment units (amp, CD players/changers, radar detectors, theft recovery systems, etc.) and cell phones placed near the navigation system.
- When the satellite control centers are experiencing problems.

Muting Logic

Whenever the navigation system is giving guidance, outputs of all the speakers except the front speakers are decreased. When the voice control system is being used, all of the speakers are muted. If the HandsFreeLink is in use, the voice control system is unavailable.

LCD Unit Limitations

The screen is touch sensitive. Touch the display directly to select items on the screen.

- In cold temperatures, the display may stay dark for the first minute until it warms up.
- When the display is too hot because of direct summer sunlight, it remains dark until the temperature drops (you may see an error message displayed stating this fact).
- When the humidity is high and the interior temperature is low, the display may appear cloudy. The display will clear up after some use.
- Fingerprints on the screen may be noticeable. Clean the screen with a soft, damp cloth. You may use a mild cleaner intended for eye glasses or computer screens. To avoid scratching the panel, do not rub too hard or use abrasive cleaners or shop towels.

Symptom Duplication

When the symptom can be duplicated, verify that it is not a characteristic of the system. Review the Navigation Manual and compare it to a known-good vehicle (with the same software and database), under the same conditions. If the symptom is not the same as the known-good vehicle, follow the self-diagnostic procedures and the appropriate troubleshooting procedures.

When the symptom does not reappear or only reappears intermittently, ask the customer about the conditions when the symptom occurred.

- Always ask the customer to demonstrate the problem.
- Try to establish possible user error or misunderstanding of the system.
- Try to establish if outside interference may have been the cause.

GETtheMANUALS.org

- Vibration, temperature extremes, and moisture (dew, humidity) are factors that are difficult to duplicate.
- Inspect the vehicle for after-market electronic devices (vehicle locators, amps, radar detectors, etc.) that may be hidden.

NOTE: **When troubleshooting navigation system problems, ensure that the known-good vehicle is the same software version year and model as the vehicle being serviced. Mixing incompatible navigation systems or other system components can delay the troubleshooting process by creating symptoms or issues unrelated to the original problem.**

Audio-Navigation Unit and SD Module Service Precautions

Contrary to previous generations of DVD navigation systems, the audio-navigation unit and the SD module cannot be substituted separately for testing purposes. You can substitute a combined audio-navigation unit and SD module with a known-good combined audio-navigation unit and SD module. When the audio-navigation unit and the SD module are connected to a vehicle, and powered up for the first time, the audio-navigation unit and the SD module go through a mating process where the SD module writes the audio-navigation unit's serial number to its memory. The audio-navigation unit and the SD module are available separately.

When you get a replacement audio-navigation unit, it does not come with an SD module, but the unit is able to mate one time to an SD module. When you connect the audio-navigation unit to the SD module and power it up for the first time, the two components are mated. Once the audio-navigation unit is mated, it does not accept an SD module that is already mated to another audio-navigation unit. It does accept a new SD module.

The SD module is removable from the audio-navigation unit. If the audio-navigation unit is replaced, install the original SD module into the new audio-navigation unit. When you transfer the SD module, all the customer's settings, music, and photographs are transferred.

The SD module is able to mate more than once, allowing you to transfer the SD module with the customer's information to a new audio-navigation unit. The SD module must mate to a new audio-navigation unit. It cannot mate to an audio-navigation unit that has been mated to another SD module.

A new audio-navigation unit is defined as a unit that has not been mated to an SD module. A new unit may be new or remanufactured.

Audio-Navigation Unit	SD Module	Result
New	New	OK
Original	New	OK
New	Original	OK
Original	An audio-navigation unit mated to a different SD module	NG
An audio-navigation unit mated to a different SD module	Original	NG

If you need to replace the SD module, there is no way to transfer customer data to a new SD module. Explain to your customer that their personal information is not transferable. The navigation system has the Save Users

GETtheMANUALS.org

Memory function available, but Honda does not recommend using it. If the SD module is OK, install it in the new audio-navigation unit, and it will automatically transfer all the customer's information and settings.

If you need to replace the SD module, you can try to back-up the navigation data (if possible) and transfer it to the new SD module. See **SAVE USERS MEMORY**. The Save Users Memory function only copies customer settings and phone information.

- When the battery is disconnected, the internal GPS clock resets to 0:00. The clock resets to the correct time after the system finishes GPS initialization.
- Before disconnecting the battery, obtain any PGM-FI or A/T DTCs and freeze frame data (which are lost when the PCM loses power).
- After reconnecting the battery, you have to wait to get the initial signal from the satellite. It will take from 10 to 45 minutes.
- Adjust the setup clock settings (time zone and daylight savings) in the navigation system.

System Initialization

If the navigation system loses power (like the battery was disconnected), the navigation system requires initialization. Once completed, your system is ready to use.

This initialization requires the following:

- Press and hold the VOLUME/POWER knob for at least 2 seconds. The audio-navigation unit exits the anti-theft mode. Or you can enter the 5-digit anti-theft code.
- GPS initialization (may not be needed depending of the length of time the system was without power).
- Map matching aligns the GPS to a location on the map.

GPS Initialization

NOTE: You must park the vehicle outside with a clear view of the sky.

Depending on the length of time the battery was disconnected, your system may require GPS initialization. If it does, the CSF screen appears:

Fig. 1: Identifying GPS Initialization CSF Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

If this procedure is not necessary, the system proceeds directly to the Disclaimer screen. During initialization, the system searches for all available GPS satellites, and obtains their orbital information. Park the vehicle out in the open with a clear view of the sky for this procedure.

If the navigation system finds the satellites properly, the CSF screen changes to the Disclaimer screen. If within 10 minutes the system fails to locate a sufficient number of satellites to locate your position, the confirmation screen appears.

Fig. 2: Identifying GPS Initialization Confirmation Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

If this screen appears, turn off the engine, then restart the vehicle and move it to a different location. If the Disclaimer screen appears, the GPS initialization is complete.

NOTE:

- **The average acquiring time is less than 10 minutes, but it can take as long as 45 minutes.**
- **If the system is still unable to acquire a signal, follow the instructions on the screen. If this screen appears again, go to GPS icon is white or not shown troubleshooting.**
- **Skip a CSF screen by pressing the DEST and the ZOOM OUT buttons at the same time and you can move to a System Links screen.**

Map Matching

This part of the initialization matches the GPS coordinates with a road on the map screen. To do this part of the procedure, make sure that the navigation system displays a map, and drive the vehicle on a mapped road shown on the map screen. Do not enter a destination at this time. When the name of the current road you are driving on appears at the bottom of the screen, the entire procedure is complete. Your system is now ready to use.

Ordering Updates Navigation Software

If the customer wants a yearly navigation software update, there are two ways to purchase one. They can either call 888-291-4675, or order on-line at www.hondanavi.com.

When customers order an update navigation software, they need:

GETtheMANUALS.org

- VIN
- Device number (found on the System/Device Information screen)
- Credit card

Update navigation software is available for purchase usually in the fall of each year. They may contain the following:

- Enhanced maps and points of interest (POI) coverage
- Fixes for minor software bugs
- Additional features

The update is loaded on a USB device which is mailed to the customer along with the password.

When the customer receives the USB device with the update, insert the USB device into the USB update port located in the passenger's dashboard area behind the glove box. The customer is prompted to enter the password that is shipped with the update USB device. The navigation system automatically updates the navigation software.

NOTE: The update on the USB device is designed to update the vehicle with the submitted VIN. If a customer has more than one vehicle that needs updating, they need to order a separate update USB device for that vehicle.

Never promise your customer future free updates. There are no free programs for updating the navigation software. Updates are generally available for purchase each fall. The online navigation software order site provides information when an update is available.

How to Answer Customer Questions about Navigation Coverage

Some customers may ask questions regarding a city, address, or POI (point of interest) covered by the navigation system. It is better to verify a coverage question on an actual vehicle than to disappoint your customer by promising coverage that may be incomplete or missing in their area. The following suggestions can be used to answer coverage inquiries from your customer.

Is my address covered by the navigation system?

Using a current production vehicle (of the same model), and enter the customer's address (street first) to see if their area is covered. Always enter the street first, because sometimes their city may be included in a neighboring township, or under some larger metropolitan city name. If the address is shown in a later year vehicle, but not your customer's vehicle, you might recommend that your customer purchase an update.

Is my city covered by the navigation system?

For general questions about whether a city is covered, view the map coverage link on the navigation software order site. On the site, select a year, and select a model, then click on the Coverage link. You then select a state or province, and the cities are listed. This does not guarantee that the customer's road or address is in the system. Verifying on an actual production vehicle is always the best guarantee that your information is accurate.

GETtheMANUALS.org

The gas station on my corner is now a restaurant. Why is it still incorrect in the navigation system?

For POI-related customer questions, explain that businesses are constantly moving, and there can be a considerable lag in updating the millions of POIs in the system. The database is updated annually, and the best way to the verify whether the POI is accurate is verify the inquiry on a current production vehicle.

Answers to these and other questions regarding coverage can be found in these locations:

- In the Frequently Asked Questions section of the Navigation Manual.
- At the online navigation software order site, by clicking on the FAQs link.

How do I find the local address of a business that is part of a national chain (for example, Starbucks)?

There are three ways to find the local address to businesses:

- If you know the phone number of the business, select Phone Number and enter the 10 digit phone number (area code plus seven digit number).
- Select Category, then Restaurant. Enter the keyword Star. The resulting list includes all restaurants that have the letters Star anywhere in the name.
- Select Name and enter Starbucks. For more common business names, like McDonalds, you may have to search through a list that includes other businesses like McDonalds Welding, McDonalds Automotive, etc.

LEVER-LOCKED CONNECTOR

Disconnecting

To disconnect the connector, pull the lever (A) while pushing the lock tab (B) down, then pull the connector (C).

Fig. 3: Disconnecting Lever-Locked Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Connecting

GETtheMANUALS.org

To connect the connector, push the connector into the connector sleeve (A). As the connector is pressed in, the lever (B) moves to the locked position.

Fig. 4: Connecting Lever-Locked Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

HOW TO CHECK ERROR HISTORY (NAVIGATION DTCS)

NOTE: The navigation DTCs cannot be retrieved with the HDS.

The Error History feature is to record intermittent navigation issues that occur while the customer is using the system. Sometimes the customer complaint cannot be duplicated. The error history may record the information needed to diagnose the problem. To check the error history:

1. Start the engine.
2. Press and hold the MAP/GUIDE, the DEST, and the CANCEL buttons for 3 seconds.
3. When the Select Diagnosis Items menu appears, select the Self-Diagnosis Mode.

Fig. 5: Display - Select Diagnosis Items Menu
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. When the audio-navigation unit has hard error codes, the Error History icon appears yellow when the Self-Diagnosis Mode (System Links) screen is displayed. When no hard error codes are stored, the icon appears gray. To view the errors with their navigation DTC, select the Error History icon.

GETtheMANUALS.org

Fig. 6: Display - Error History Icon
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Select Hard Error in the Error History menu.

NOTE: Soft Error is for factory use only.

Fig. 7: Display - Error History Menu
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. The Hard Error screen displays the following information for each error:
   - The navigation DTC for the error.
   - A brief description of the navigation DTC.
   - The date and time when the error occurred.

NOTE: The Save feature is for factory use only.

GETtheMANUALS.org

Fig. 8: Display - Hard Error Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Use the navigation DTC Troubleshooting table to troubleshoot the error. Select Return to exit the Error History main menu.

HOW TO CLEAR ERROR HISTORY

1. Turn the ignition switch to ON (II).
2. Press and hold the MAP/GUIDE, the DEST, and the CANCEL buttons for 3 seconds.
3. When the Select Diagnosis Items menu appears, select the Detail Information & Setting.

Fig. 9: Display - Select Diagnosis Items Menu
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Select the Error History under the Detail Information & Setting menu.

GETtheMANUALS.org

Fig. 10: Display - Detail Information & Setting Menu
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Select Hard Error in the Error History menu.

NOTE: **Soft Error is for factory use only.**

Fig. 11: Display - Error History Menu
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Select Clear in the Hard Error.

NOTE:

- **By selecting Clear, all hardware errors stored in history are erased at the same time.**
- **The Save feature is for factory use only.**
- **Write down the navigation DTCs before deleting.**

GETtheMANUALS.org

Fig. 12: Display - Hard Error Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. The confirmation screen appears, then selects Yes. All Hard Error history are cleared. The system returns to the Error History menu automatically.

NAVIGATION SYSTEM ERROR MESSAGES

ERROR MESSAGES

Screen Error Message	Solution
The navigation system is unable to start due to excessive heat. The system will start after the system cools.	This message appears briefly when the navigation ECU temperature is too high, and then turn the ignition switch to LOCK (0) until the temperature cools down. The system turns back on when the audio-navigation unit cools down. Also make sure there is nothing blocking the cooling fan opening.
The display temperature is too high! For protection. The display will shut down.	This message appears briefly when the display temperature is too high, and then the display turns off until the temperature cools down. The system turns back on when the display cools down.
The navigation system cannot access the memory module. Please turn the ignition off, then turn it back on. If the problem continues, visit your dealer when convenient.	This message appears when the system detects the SD module is not connected or there is an SD module connecting error. Check any official Honda service website for more service information about the navigation system. If you recently replaced the audio-navigation unit, make sure the SD module was transferred to the new unit.

GETtheMANUALS.org

The navigation system cannot access the memory module because it is not authorized to work with this system. Please insert the correct memory module or visit your dealer when convenient.	This message appears when the system detects a SD module that is not approved. Make sure the SD module is a genuine part. If the audio-navigation unit was replaced, make sure the SD module was transferred to the new unit. The SD module may be damaged or was not properly mated to the audio-navigation unit. Check any official Honda service website for more service information about the navigation system.

TMC (TRAFFIC MESSAGE CHANNEL) INFORMATION

For more information about TMC, refer to www.hondacars.com/traffic.

GPS ANTENNA REMOVAL AND INSTALLATION

REMOVAL

1. Inner Vent - Both Sides
    1. Carefully pry out the inner vents (A) with the appropriate trim tool to detach the clips (B), then remove the inner vents.

Fig. 14: Identifying Inner Vents And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Audio-Navigation Unit Assembly

NOTE:

- **Eject the discs before removing the audio-navigation unit to prevent**

GETtheMANUALS.org

damaging the CD/DVD player's load mechanism.

- **If you are replacing the audio-navigation unit, write down the audio presets (if possible), then enter them into the new audio-navigation unit.**
- **If the audio-navigation unit is replaced or disconnected, Map Matching must be done.**
- **Lay a shop towel under the parts when working on them to protect the face panel from scratches or other damage.**
- **Do not work in a dusty or dirty place.**
- **Discharge static electricity from your body before and during the work.**
- **Do not touch the circuit board(s) with your bare hands.**
- **Do not work with dirty hands.**
- **Do not touch the terminal connector of the flat plate cable with your bare hands (If you have touched it, wipe it off thoroughly.).**

1. Remove the bolts.
2. Disconnect the connectors, then pull out the audio-navigation unit (A).

START-UP PROCEDURE AND DIAGNOSTIC MENU

NOTE: **CHECK THE VEHICLE BATTERY CONDITION FIRST .**

1. Start the engine.
2. At the disclaimer screen use the audio-navigation unit hard buttons:

   Press and hold the MAP/GUIDE, the DEST, and the CANCEL buttons for 3 seconds. The display screen goes directly to the Select Diagnosis Items menu shown.

   - Self-Diagnosis Mode (runs the automatic diagnosis of the navigation system)
   - Detail Information & Setting (allows you to manually diagnose the navigation system)

Fig. 25: Display - Select Diagnosis Items Menu
Courtesy of AMERICAN HONDA MOTOR CO., INC.

SYSTEM LINKS

1. Select the Self-Diagnosis Mode from the Select Diagnosis Items menu. The message at the bottom of the screen flashes indicating the diagnosis is running.

GETtheMANUALS.org

Fig. 26: Display - Self-Diagnosis Mode In Process
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Select the icon you want to diagnose to see the details of that diagnostic function.

   The System Links function runs automatically and displays a flashing message at the bottom of the screen reminding you to have the engine running for the test. The diagnosis tests the following:

   - Most of the wires connecting the external navigation components shown in the block diagram.
   - The results from the various components shown in the block diagram.
   - The microphone is tested by listening to the bong sound produced by the audio-navigation unit from the speakers when the diagnosis is started. This requires that the audio system be operating normally.
3. When the diagnosis finishes, the icons turn different colors based on their test status. Each icon color is explained in the table.

Icon Colors	Description
Green	The system ran a diagnosis and the results are OK.
Red	Errors that require replacement of hardware or harness. Examples are connection error or memory diagnosis errors. Troubleshoot for navigation DTCs.
Yellow	Errors that do not require hardware replacement, such as leaving the vehicle in ACCESSORY (I), or because of a missing accessory.
White	The diagnosis is running. The screen functions are locked out while the diagnosis runs.
Gray	The system cannot automatically check this function. You have to select the diagnosis item and manually do additional testing, like checking the navigation buttons in the Hard Key test. When you complete the Hard Key test and return to the System Links screen, the gray icon turns green.

NOTE: By selecting the HELP icon, you can see a description for each color.

4. The indication on the screen may not change until you exit and reenter the Self-Diagnosis Mode. In some cases, you may have to restart the engine for the indication to change. After you repair the affected component or harness, repeat this diagnosis.

GETtheMANUALS.org

USB

This diagnosis displays directly from the System Links screen by selecting the USB icon.

This diagnosis checks the connection about navigation update harness.

If Connection shows NG, check for open in the wire between audio-navigation unit connector H (7P) terminals No. 6 (USB ADPT) and No. 7 (USB ON).

Fig. 27: Display - USB Connection Status Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

FLASH MEMORY

This diagnosis displays directly from the System Links screen by selecting the Flash Memory icon.

This diagnosis checks the SD module status.

- Insert: Displays the result of the insert status about the SD module (OK; Inserted, NG; Not Inserted).
- Access: Displays the result of the access to the SD module (OK/NG). If NG, REPLACE THE SD MODULE , and recheck.

Fig. 28: Display - Flash Memory Status Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

FACTORY DIAGNOSTIC SCREEN IN LINE DIAG

GETtheMANUALS.org

NOTE: **If the vehicle left the factory in the factory diagnostic mode, you will see this screen every time you turn on the ignition. Sometimes this screen also appears after you replace the audio-navigation unit with a new or remanufactured unit.**

When an audio-navigation unit is powered up for the first time at the factory, the factory diagnosis screen (In Line Diag) appears. Normally the factory does the steps necessary to verify proper operation and terminate the factory diagnosis.

Until the proper confirmation sequence is done, the screen appears every time you turn on the ignition.

Fig. 29: Display - In Line Diag Diagnostic Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Follow the steps to prevent the screen from showing up in the future:

1. Press and hold the MAP/GUIDE, the DEST, and the CANCEL buttons for about 3 seconds. The Select Diagnosis Items screen appears.
2. Press and hold the MAP/GUIDE button until the In Line Diag CSF Setting screen appears.

Fig. 30: Display - In Line Diag CSF Setting Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Set the In Line Diag Setting to Complete, and make sure the CSF setting is ON, then select Return twice to exit the diagnostic mode. The In Line Diag should not appear again.

DETAIL INFORMATION & SETTING

GETtheMANUALS.org

This section allows you to run a specific diagnosis and allows additional setting choices for some screens that are not shown when selecting an icon from the System Links screen.

Select the item you want to check, and the test begins. To return to the previous screen, select Return.

- Monitor Check
- Unit Check
- Car Status
- Version
- F-CAN
- Log Data
- GPS Information
- Yaw Sensor
- Error History
- Functional Setup
- B-CAN

Fig. 31: Display - Detail Information & Setting Menu
Courtesy of AMERICAN HONDA MOTOR CO., INC.

MONITOR CHECK

Overview of the navigation display.

These screens allow you to troubleshoot the navigation display. Select the item you want to troubleshoot, and follow the diagnostic instructions.

- RGB Color
- Gray Tone
- White Raster
- Black Raster
- Color Pattern
- Monitor Adjustment

GETtheMANUALS.org

- Touch Panel Check
- Touch Panel Calibration

Fig. 32: Display - Monitor Check Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

RGB Color

This screen verifies that the navigation display is receiving the video (R, G, B, and Composite sync) signals properly. The three primary colors should all appear without distortion. The combination of all three should produce a central white section. If the picture has lines in it, or scrolls horizontally or vertically, and any of the colors are missing, or scrolls horizontally troubleshoot for the color signal and composite sync problem.

Fig. 33: Display - Radio Signal RGB Color Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Gray Tone

This screen checks problems with contrast. You should be able to see the changes from bar to bar across the scale. It is normal for the two bars on either side to appear the same. If you cannot see changes from bar to bar, REPLACE THE AUDIO-NAVIGATION UNIT .

GETtheMANUALS.org

Fig. 34: Display - Gray Tone Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

White Raster

This screen checks for pixels that may be dead (off). The entire display must be white. If there are dead pixels, REPLACE THE AUDIO-NAVIGATION UNIT .

Fig. 35: Display - White Raster Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Black Raster

This screen checks for pixels that may be stuck on. The entire display must be black. If pixels are stuck on, REPLACE THE AUDIO-NAVIGATION UNIT .

Fig. 36: Display - Black Raster Screen

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Color Pattern

The screen shows the colors being used for the map and menu screens. This is for factory use only. To check the color signal, use the RGB Color diagnosis.

Fig. 37: Display - Color Pattern For Map And Menu Screens
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Monitor Adjustment

This screen allows you to adjust the navigation display. Select the item you want to adjust.

- Navi: This allows you to center the navigation display.
- Rear Camera: This allows you to adjust the rearview camera guide lines.

Fig. 38: Display - Monitor Adjustment Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Navi

If you selected the Navi, select Tuning, and use the joystick to move the picture up/down or left/right. Then select Set to save the selection. Do not adjust the monitor position unless directed by a service bulletin. Default resets the display position to factory specifications.

GETtheMANUALS.org

Fig. 39: Display - Monitor Adjustment Screen (Navi)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Rear Camera

If you selected the Rear Camera, select Tuning, then select the wide view, the normal view, or the top down view, and use the joystick to move the picture up/down or left/right. then press the CANCEL button to return the previous screen, and save the selection. Do not adjust the monitor position unless directed by a service bulletin. Default resets the display position to factory specifications.

Fig. 40: Display - Monitor Adjustment Screen (Rear Camera)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 41: Display - Rear Camera View Screen (Wide, Top Down And Normal Views)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

Touch Panel Check

The panel touch sensing system consists of a touch sensitive resistive membrane covering the display. The screen has to be physically touched to make it work. The display has the capability of 479 touch locations (left to right), and 233 touch locations (top to bottom). The upper left hand corner is position (0, 0) and the lower right hand corner is (479, 233) as displayed. Touching anywhere on the screen displays the coordinate of the location, and cause the place you touch to display a + icon. If any area of the screen either does not respond, or responds at some other location when touched, then REPLACE THE AUDIO-NAVIGATION UNIT .

NOTE:

- **Unlike earlier screens that used infrared sensors, direct sunlight does not affect this test.**
- **A box appears after you touch the screen.**

Fig. 42: Display - Touch Panel Check Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Touch Panel Calibration

The display screen uses a touch sensitive membrane. This means that every location of the entire surface of the display is touch sensitive. This diagnosis allows alignment of these touch locations with the location of the buttons images on the screen.

This should never need adjustment, and is used only by the factory to adjust the touch locations for parallax (the touch locations appear different when viewed at an angle). If you are directed to make an adjustment by the factory or other service information, follow this procedure:

- The screen consists of the + icons. Touch the center of the five + icons on order 1-5.

  NOTE: **Touch the center of the + icon correctly.**

- To store any changes you make, touch the Set button.
- Select Return to exit the diagnosis.

GETtheMANUALS.org

Fig. 43: Display - Touch Panel Calibration Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

UNIT CHECK (QUICK CHECK)

Some of the tests and screens that are displayed under the Unit Check are different from the more detailed checks listed under other menu options.

To start the test, select the item you want to check.

- Display
- Hard Key
- XM
- Air-con
- Rear Camera
- TMC (Traffic) Status
- USB Memory Info*
- Navi ECU
- HFL
- GPS Antenna
- Radio
- i-MID

*: Grayed out without USB device connected to the USB update port.

GETtheMANUALS.org

Fig. 44: Display - Check Unit Selection Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Display

This diagnosis does additional checks on the communication bus between the navigation ECU and the navigation display. In addition, this test checks the internal electronic functions.

- If Connection shows NG, REPLACE THE AUDIO-NAVIGATION UNIT .
- Version represents the software version for the display.

Fig. 45: Display - Audio-Navigation Unit Connection And Software Version
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Hard Key

This diagnosis tests the navigation hard buttons surrounding the navigation display, the HFL-navigation voice control switch, and the audio remote switch.

- To complete the test, press each buttons, and move the joystick to each indicated position. As each function is tested, the corresponding button on the display should highlight.
- To exit, press and hold the ENTER button.

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Select Navi Key

Select Navi Key

Fig. 47: Display - Select Navi Key Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Select Steering Key

Select Steering Key

Fig. 48: Display - Select Steering Key Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Select Audio Key

GETtheMANUALS.org

Select Audio Key

Fig. 49: Display - Select Audio Key Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

XM

This diagnosis checks the GA-Net bus between the audio-navigation unit and the XM receiver.

If Connection shows NG, the connection may be open or short between the XM receiver and the audio-navigation unit. **CHECK FOR HARD ERROR CODES**.

Fig. 50: Display - XM Receiver And Audio-Navigation Unit Connection Status Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Aircon

This diagnosis detects if the ignition switch is ON (II) using information provided over the F-CAN bus. Then tests the climate signal via B-CAN bus between the audio-navigation unit and the climate control unit. Make sure the engine is running for this test.

- If Connection shows NG, **CHECK FOR HARD ERROR CODES**.
- If Ignition shows OFF, check for F-CAN bus lines.

GETtheMANUALS.org

Fig. 51: Display - Aircon Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Rear Camera

This diagnosis checks the rearview camera connection.

If Connection shows NG, **CHECK FOR HARD ERROR CODES**.

Fig. 52: Display - Rearview Camera Connection Status Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TMC (Traffic) Status

This diagnosis checks the current state of the RDS-TMC reception.

- Provider Count: The number of providers that can be received.
- Frequency: Frequency receiving at this time.

To start the TMC status check, select the Provider Count and Frequency you want to check, then select Start.

There are two modes to check the TMC status. The modes cannot select manually:

- Synchronous mode
- Asynchronous mode

GETtheMANUALS.org

This diagnosis checks the following status. Block Search Time, Uncorrected Blocks/min, and Message Counter are indicated at the Synchronous mode only.

- Field Strength: Displays reception sensitivity.
- Block Search Time: Displays the time until changing to the Synchronous mode.
- Uncorrected Blocks/min: Displays the number of block errors per one minute.
- Message Counter: Displays the number of message that is received.
- Error Status: Displays RDS error status;
  - 0: No error
  - 1: Cannot receive TMC
  - 2: Bus error
  - 3: Decoder error
  - 4: Undefined error

Fig. 53: Display - TMC Status Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

USB Memory Info

This diagnosis displays the USB device status that is connected to the audio-navigation unit.

If the USB memory device is connected to the USB update port located in the passenger's dashboard area behind the glove box, the screen displays the USB memory size, the Product ID, Vender ID, and connection status (Inserted/Not Inserted).

GETtheMANUALS.org

Fig. 54: Display - USB Memory Information Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

When you select Files, the USB device file information is displayed.

Fig. 55: Display - USB Memory Selected File Information Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Navi ECU

This diagnosis looks for problems in the navigation ECU. When you start this diagnosis, the audio-navigation unit may freeze or delay up to a minute while the diagnosis runs.

- D-RAM: Displays the result of the access to the DRAM (OK/NG). If NG, REPLACE THE AUDIO-NAVIGATION UNIT .
- Program Version: Displays the version of the navigation software.
- Model: Displays the audio-navigation unit model name.
- Serial No.: Displays the audio-navigation unit serial number. That should be the same as the serial number found on the upper side of the audio-navigation unit.
- Flash: Displays the result of the access to the flash memory (OK/NG). If NG, REPLACE THE AUDIO-NAVIGATION UNIT .

Fig. 56: Display - Navigation ECU Status Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

HFL

GETtheMANUALS.org

This diagnosis checks first whether the HandsFreeLink control unit is connecting to the audio-navigation unit via the GA-Net. If HFL shows B1792 and GA-NET shows NG, go to **HFL does not respond (Navigation)** troubleshooting. Then checking the HandsFreeLink control unit status. If HFL shows B1792 and GA-NET shows OK, **GO TO HFL DTC B1792 TROUBLESHOOTING** .

If the HandsFreeLink control unit need to update the software, **do the HandsFreeLink control unit update** See **HANDSFREELINK CONTROL UNIT REMOVAL AND INSTALLATION** or **HANDSFREELINK CONTROL UNIT UPDATE** .

Fig. 57: Display - HFL Status Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GPS Antenna

This diagnosis tests the GPS antenna connection.

If Antenna shows NG, the GPS antenna may be failure. **CHECK FOR HARD ERROR CODES**.

Select Information to see the GPS satellite details.

Fig. 58: Display - GPS Antenna Connection Information Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Radio

This diagnosis displays the internal radio tuner and the internal CD player status.

GETtheMANUALS.org

If Connection shows NG, REPLACE THE AUDIO-NAVIGATION UNIT .

- Electric Field Intensity: Displays radio reception sensitivity (dBuV).
- CD Mech. Version: Displays the version of the internal CD player.

Fig. 59: Display - Internal Radio Tuner And CD Player Status Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

i-MID

This diagnosis checks on the GA-Net bus between the audio-navigation unit and the multi-information display unit.

If Connection shows NG, check the connection between the multi-information display unit and the audio-navigation unit.

Fig. 60: Display - I-MID Connection Status Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

CAR STATUS

Use this screen to confirm that the audio-navigation unit is properly receiving input signals. Signals equal to (0) are OFF, and signals equal to (1) are ON. If the value on the display does not match the actual vehicle status, then check the wire carrying the signal.

- VSP-Vehicle Speed Pulse from the PCM (audio-navigation unit connector A (24P) terminal No. 23)

GETtheMANUALS.org

The VSP comes from the PCM as a dedicated signal. Internally, the audio-navigation unit compares the actual VP on the map against street data to adjust the pulse to speed scaling factor.

a. OFF (0) when vehicle is not moving
b. ON (1) when vehicle is moving

- BACK-Reverse indication from reverse relay (audio-navigation unit connector B (20P) terminal No. 9)

  The BACK signal is used by the audio-navigation unit to allow the map screen to show the VP moving backwards when the vehicle is in R. This signal is needed because the VSP has no direction indication.

  a. OFF (0) when the shift lever is in any position other than R
  b. ON (1) when the shift lever is in R

- IGNITION-Ignition switch position indication

  Detects if the ignition switch is ON (II) using information provided over the F-CAN bus.

  a. OFF (0) when the ignition switch is in ACCESSORY (I)
  b. ON (1) when the ignition switch is in ON (II)

- ILL-Illumination Indication

  The illumination indication comes from the gauge control module to the audio-navigation unit via the B-CAN bus.

  The navigation uses the signal to determine whether to put the navigation screen into the Day or Night brightness mode. If there are stored B-CAN DTCs, this function may not work. Make sure the check for DTCs before diagnosing this input.

  a. OFF (0) when parking lights, or headlights are off
  b. ON (1) when parking lights, or headlights are on

- ILL CANCEL

  The illumination cancel indication comes from the gauge control module to the audio-navigation unit via the B-CAN bus.

  This item detects whether the illumination cancel function is in use. If there are stored B-CAN DTCs, this function may not work. Make sure the check for DTCs before diagnosing this input.

  a. OFF (0) when the dashlights brightness control knob is less than 90 % brightness with the headlights turned on
  b. ON (1) when the dashlights brightness control knob is more than 90 % brightness with the headlights turned on

GETtheMANUALS.org

Fig. 61: Display - Car Status Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

VERSION

This screen displays the current version information for the navigation system. DBOOT (NOR-FLROM) and System u-Com are all for factory use.

- Navi Application (DRAM): Displays the version of the navigation software.
- Map Data: Displays the version of the map data.

Fig. 62: Display - Navigation System Current Version Information Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

F-CAN

F-CAN (Fast Controller Area Network) passes information between processors on the network. For example, the F-CAN network passes trip computer information between the gauge control module and the audio-navigation unit for the trip computer function. The F-CAN network uses a communication protocol that transmits data at 500 Kbps.

- This diagnosis must have the engine running.
- If F-CAN shows ERROR ACTIVE, an error is not detected between F-CAN bus and the audio-navigation unit. If any error is detected, check for DTCs for the F-CAN with the HDS. The data displayed in the ID boxes is for factory use only.

GETtheMANUALS.org

Fig. 63: Display - F-CAN System Link Information Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

LOG DATA

This screen allows the factory to collect log data to troubleshoot navigation system issues.

Fig. 64: Display - Navigation System Issues Troubleshooting Log Data
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GPS INFORMATION

This screen shows the current status of GPS reception. The circular diagram shows the current location of the GPS satellites (yellow numbers) as they would appear in the sky. The outer circle represents the horizon (0 degrees elevation). The middle and inner circles represents 30 and 60 degrees respectively. The very center of the diagram (90 degrees elevation) is directly overhead. Nearby obstructions, like tall buildings will block satellites in that direction. That is why it is necessary to be in an open area to effectively troubleshoot GPS reception issues. The satellite numbers shown on the diagram correspond to the PRN number in the GPS Details screen. There are always at least 24 active GPS satellites in orbit. Because satellites fail, and have to be removed from service, spares are always parked in orbit, ready to be activated. This is why the PRN (satellite ID number) can be greater than 24.

NOTE: **When you use this screen for troubleshooting, park the vehicle outside, away from buildings, tall trees, and high-tension wires for at least 10 minutes with the engine running.**

- The Number of Satellites box shows the number of acquired satellites (maximum of 12). It should contain

GETtheMANUALS.org

three or more icons.

- The Current Position shows Latitude, Longitude, and Elevation (in feet). If there are less than four satellites, the elevation can be grossly inaccurate.
- The date/time field (A) shows the current date, and also a time that includes daylight savings and other offsets entered by the customer in Setup screen 2 Adjust Time Zone/Clock.

Fig. 65: Display - GPS Information Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GPS Detail

By pressing and holding the DEST button for 2 seconds, a GPS Detail screen appears. This screen displays real time incoming satellite positional data when the vehicle is outside in the open. The information shown on this screen is for factory use.

NOTE: The data shown is an example only.

- The box TS/AS and HDop (horizontal dilution of precision)/VDop (vertical dilution of precision) is for factory use.
- The Speed and Direction information is updated in real time when driving.
- The Date/Time Information is the same as in Setup screen 2 Adjust Time Zone/Clock.
- If the 3D icon is shown above the yellow dots, this implies that at least four satellites are available for map positioning, and the GPS indicator on the map screen will be green.
- If the row of data in the table below begins with a yellow dot, the AZI and EL fields can be used to locate each satellite on the circular GPS diagram (see prior screen).

Column	Description	Problem Indication
3D	Active satellites (Yellow Dot)	If 3D or 2D is missing when the vehicle is parked outside, go to GPS icon is white or not shown troubleshooting
PRN	The satellite ID number	
ST	The status: 0 = Cannot view or searching 1 = Searching 2 = Tracking 4 = Acquiring (It is not being	If all 0, go to GPS icon is white or not shown troubleshooting

GETtheMANUALS.org

	used for positioning) 8 = Acquiring (It is being used for positioning)	
AZI	Azimuth, the angle (0-360) clockwise from north	
EL	Elevation from the horizon (90 deg is overhead)	
C/N	Receiver sensitivity	Normal signal: 49-52 No signal: 27-33
ACC	Satellite accuracy	
1/2 or 2/2	Shows view of all satellites in two screen views 1/2 or 2/2	

Fig. 66: Display - GPS Detail Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

YAW SENSOR

This diagnosis checks the gyro in the audio-navigation unit. This device detects when the vehicle turns, and repositions the vehicle position icon on the map screen.

- Sensor: Indicates the voltage output from the gyro relative to the offset voltage. It should indicate about 2.300 V-2.700 V when the vehicle is stopped.
- Offset: Indicates the reference voltage or standard within the gyro. It also should indicate about 2.300 V - 2.700 V when the vehicle is stopped.
- A sensor output voltage HIGHER than the Offset voltage indicates that the vehicle is turning to the right.
- A sensor output voltage LOWER than the Offset voltage indicates that the vehicle is turning to the left.
- Offset and Sensor should both indicate about 2.300 V-2.700 V when the vehicle is stopped. If either reads below 2.300 V, or above 2.700 V, replace the audio-navigation unit.
- Offset and Sensor should be within +/-0.01 V of each other when the vehicle is stopped. The Sensor value should change relative to the Offset as the vehicle turns while driving. If not, replace the audio-navigation unit.
- Auto Tuning: For factory use only. This setting should be ON.

GETtheMANUALS.org

- Learning Level: Displays the status of the internal tuning function. At initialization, this value starts at 0 and increases to 10 as the internal correction values become more accurate.
- CCW Factor, CW Factor: For factory use only.
- GyroAD: Displays the result of the AD value (OK/NG). If NG, **CHECK FOR HARD ERROR CODES**.
- GyroZero: Displays the result of the zero point output voltage (OK/NG). If NG, **CHECK FOR HARD ERROR CODES**.

Fig. 67: Display - Yaw Sensor Information Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

ERROR HISTORY

Refer to **HOW TO CHECK FOR ERROR HISTORY** to use this diagnosis.

Fig. 68: Display - Error History Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

FUNCTIONAL SETUP

Select the item you want to check.

- Mic Level
- Demo Mode
- Save Users Memory

GETtheMANUALS.org

- All Clear

Fig. 69: Display - Functional Setup Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Mic Level

This diagnosis allows you to independently test the HFL-navigation microphone and the HFL-navigation voice control switch. The TALK button is used to activate the voice control system. The microphone is located near the map light in the roof console. The microphones can now isolate the driver's voice even when there is noise or other conversations in the vehicle. To properly check the microphone, make sure you are sitting in the driver's seat.

This diagnosis checks whether the HFL-navigation microphone and the HFL-navigation voice control switch are connecting to the HandsFreeLink control unit. Do the HFL diagnosis to check the GA-Net status before checking this diagnosis. If Mic and/or STRG SW shows HFL DTCs (B1775, B1776, B1779, and/or B1780), go to indicated HFL DTC troubleshooting.

If you check the Mic Level, in a normal voice say "testing". The Mic Level indicator on the screen should momentarily turn green. If there is no Mic Level movement when you speak, the microphone circuit must be faulty, **CHECK FOR HARD ERROR CODES**.

Fig. 70: Display - MIC Level Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Demo Mode

GETtheMANUALS.org

This screen is for factory use only, and should always be set to OFF. Occasionally DEMO setting is turned ON when vehicles are being used at auto shows or similar events. Turning this feature on, allows the navigation system to automatically follow a route to a destination when the vehicle is stationary. Speed changes the speed of the demo mode.

Fig. 71: Display - Demo Mode Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Save Users Memory

NOTE: **If the audio-navigation unit SD module is OK, transfer the SD module to the new audio-navigation unit. Do this procedure only when replacing the SD module (if possible). If the SD module is NG, it is unlikely you will be able to recover any information.**

When replacing the audio-navigation unit, this function allows the technician to transfer the customer's personal data to the new audio-navigation unit. The transferred information includes their setup settings and personal addresses. The Save Users memory cannot copy music or photographs that are saved on the old SD module. The dealer inserts a USB device into the USB update port located in the passenger's dashboard area above the glove box (not in the port that is located in the center console), and then selects the Save Users Memory function. Refer to the O/M for the USB specifications. The two functions in this diagnostic screen are Export and Import. Export saves the customer's data to the USB device, and Import moves the USB device files to the new audio-navigation unit.

Fig. 72: Display - Save Users Memory Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

This function does not start (the Export and Import buttons are grayed out) until you connect a USB device to the USB update port located in the passenger's dashboard area above the glove box (not the port in the center console).

Select Export button to move the customer's data from the original audio-navigation unit to the USB device. Select Yes on the Export User Data Confirmation screen. The process takes only a couple of seconds. The system stores.DAT files on the USB device.

NOTE: If the Export button is grayed out, check the USB update port.

Fig. 73: Display - Save Users Memory Screen (Exporting User Data)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

After replacing the new audio-navigation unit, allow the system to boot up. Insert the USB device into the USB update port and enter the Save Users Memory in the navigation system diagnostic mode.

Select the Import button to move the two files stored by the Export process from the USB device to the new audio-navigation unit. Select Yes on the Import User Data Confirmation screen. When the transfer is finished (a few seconds) the system automatically reboots. After the system reboots, remove the USB device from the USB update port.

NOTE: If the Import button is grayed out, check if the Model and the Program Version shown on the Navi ECU screen are the same.

Fig. 74: Display - Save Users Memory Screen (Importing User Data)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

All Clear

The all clear function deletes the all the ripped music, the images, and the previous destinations from the audio-navigation unit SD module.

If you select All Clear, a confirmation screen appears. When Yes is selected, a second confirmation screen appears.

Fig. 75: Display - Functional Setup All Clear Confirmation Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

When Yes is selected, the system restarts after performing the All Clear process. After the restart, a normal start-up process occurs and **NEEDS GPS INITIALIZATION**.

Fig. 76: Display - Functional Setup Delete Data Confirmation Message
Courtesy of AMERICAN HONDA MOTOR CO., INC.

B-CAN

This diagnosis checks whether the audio-navigation unit is properly connected to the B-CAN data BUS.

B-CAN (Body Controller Area Network) passes information between processors on the network. The B-CAN network uses a communication protocol that transmits data at 125 Kbps.

- This diagnosis must have the engine running.
- If any icon colors red, check for DTCs for the B-CAN with the HDS.

GETtheMANUALS.org

- Troubleshoot and resolve any B-CAN DTCs before troubleshooting the navigation system.

Fig. 77: Display - B-CAN System Link ID Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NAVIGATION SYSTEM DTC TROUBLESHOOTING INDEX

NOTE: **These DTCs cannot be read with the HDS. To view them, refer to HOW TO CHECK FOR ERROR HISTORY.**

AUDIO-NAVIGATION UNIT

DTC	Description	Failure Circuit
1002	SD Read Error	SD module
1101	Media Bus Send Error	Internal Bus

NAVIGATION SYSTEM DTC TROUBLESHOOTING INDEX

NOTE: **These DTCs cannot be read with the HDS. To view them, refer to HOW TO CHECK FOR ERROR HISTORY.**

AUDIO-NAVIGATION UNIT

DTC	Description	Failure Circuit
1002	SD Read Error	SD module
1101	Media Bus Send Error	Internal Bus
1102	USB Diag	USB
1301	GPS Antenna Error	GPS antenna
1302	GPS Receiver Error 1	GPS receiver
1303	GPS Receiver Error 2	GPS receiver
1304	Gyro Error 1	Internal gyro
1305	Gyro Error 2: ECU Temp XX °C	Internal gyro
1306	Vehicle Speed Pulse	Vehicle speed pulse
1701	Rear Camera Error	Rearview camera
1702	XM Antenna Error	XM
2607	XM Diag	XM
2608	Rear Camera Diag	Rearview camera
2610	DRAM Diag	Navigation ECU DRAM
2701	GPS Diag: Antenna	GPS
2702	GPS Diag: Receiver in Navi ECU	GPS
2703	Aircon Diag	Climate control unit
2705	HFL Diag	HFL
2706	Gyro Diag: ECU Temp XX °C	Internal gyro
2707	Mic Diag	Microphone

DIAGNOSTIC TROUBLE CODE (DTC) TESTS

DTC 1002: SD READ ERROR

GETtheMANUALS.org

Navigation System DTC Troubleshooting: 1002

Fig. 78: Navigation System DTC Troubleshooting Flow Chart (1002)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **This navigation DTC sets when there is a problem with the SD module after updating the map data.**
- **BEFORE YOU TROUBLESHOOT, MAKE SURE TO FOLLOW THE HOW TO TROUBLESHOOT THE NAVIGATION SYSTEM.**
- **Check any official Honda service website for more service information about the navigation system.**

1. Problem verification:
   - 1. **CLEAR THE HARD ERROR CODES**.
   - 2. Turn the ignition switch to LOCK (0) and then back to ON (II).
   - 3. **CHECK FOR HARD ERROR CODES**.

   Is DTC 1002 indicated?

   YES : The failure is duplicated, go to step 2.

   NO : Intermittent failure, the system is OK at this time.

2. SD module check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Do the map data update procedure. Refer to the instructions that came with the map update.
   - 3. **CLEAR THE HARD ERROR CODES**.
   - 4. Turn the ignition switch to LOCK (0) and then back to ON (II).
   - 5. **CHECK FOR HARD ERROR CODES**.

   Is DTC 1002 indicated?

GETtheMANUALS.org

YES : REPLACE THE SD MODULE .

NO : Intermittent failure, the system is OK at this time.

DTC 1101: MEDIA BUS SEND ERROR

Fig. 79: Navigation System DTC Troubleshooting Flow Chart (1101)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **This navigation DTC sets when there is an internal error in BUS sending.**
- **BEFORE YOU TROUBLESHOOT, MAKE SURE TO FOLLOW THE HOW TO TROUBLESHOOT THE NAVIGATION SYSTEM.**
- **Check any official Honda service website for more service information about the navigation system.**

1. Problem verification:
   - 1. **CLEAR THE HARD ERROR CODES**.
   - 2. Turn the ignition switch to LOCK (0) and then back to ON (II), and wait at least 1 minute.
   - 3. **CHECK FOR HARD ERROR CODES**.

Is DTC 1101 indicated?

YES : REPLACE THE AUDIO-NAVIGATION UNIT .

NO : Intermittent failure, the system is OK at this time.

DTC 1102: USB DIAG

GETtheMANUALS.org

Fig. 80: Navigation System DTC Troubleshooting Flow Chart (1102)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **This navigation DTC sets when a problem is detected with the USB device that is connected to the USB update port located in the passenger's dashboard area behind the glovebox. This USB update port is for diagnosis and map updates only. Music will not play from this USB port.**
- **BEFORE YOU TROUBLESHOOT, MAKE SURE TO FOLLOW THE HOW TO TROUBLESHOOT THE NAVIGATION SYSTEM.**
- **Check any official Honda service website for more service information about the navigation system.**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
   - 1. **CLEAR THE HARD ERROR CODES**.
   - 2. Turn the ignition switch to LOCK (0).
   - 3. Connect the USB device to the USB update port located in the passenger's dashboard area behind the glovebox.
   - 4. **CHECK FOR HARD ERROR CODES**.

   Is DTC 1102 indicated?

   YES : The failure is duplicated, go to step 2.

   NO : Intermittent failure, the system is OK at this time. If the vehicle repeatedly comes back with the navigation DTC, try a known-good USB device, and recheck.

2. Audio-navigation unit check:
   - 1. **CLEAR THE HARD ERROR CODES**.

GETtheMANUALS.org

- 2. Turn the ignition switch to LOCK (0).
- 3. Disconnect the USB device, then connect a known-good USB device to the USB update port.
- 4. **CHECK FOR HARD ERROR CODES**.

Is DTC 1102 indicated?

YES : REPLACE THE AUDIO-NAVIGATION UNIT .

NO : Original USB device is faulty.

DTC 1301: GPS ANTENNA ERROR

Fig. 81: Navigation System DTC Troubleshooting Flow Chart (1301)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **This navigation DTC sets when there is poor connectors or loose terminals at the GPS antenna connector or an open in GPS antenna lead.**
- **BEFORE YOU TROUBLESHOOT, MAKE SURE TO FOLLOW THE HOW TO TROUBLESHOOT THE NAVIGATION SYSTEM.**
- **Check any official Honda service website for more service information about the navigation system.**

1. Problem verification:
   - 1. **CLEAR THE HARD ERROR CODES**.

GETtheMANUALS.org

- 2. Turn the ignition switch to LOCK (0) and then back to ON (II).
- 3. **CHECK FOR HARD ERROR CODES**.

Is DTC 1301 indicated?

YES : The failure is duplicated, go to step 2.

NO : Intermittent failure, the system is OK at this time.

2. Determine possible failure area (GPS antenna lead, others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. **SUBSTITUTE A KNOWN-GOOD GPS ANTENNA LEAD**.
   - 3. **CLEAR THE HARD ERROR CODES**.
   - 4. Turn the ignition switch to LOCK (0) and then back to ON (II).
   - 5. **CHECK FOR HARD ERROR CODES**.

Is DTC 1301 indicated?

YES : Go to step 3.

NO : Replace the original GPS antenna lead.

3. Audio-navigation unit check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. **SUBSTITUTE A KNOWN-GOOD GPS ANTENNA**.
   - 3. **CLEAR THE HARD ERROR CODES**.
   - 4. Turn the ignition switch to LOCK (0) and then back to ON (II).
   - 5. **CHECK FOR HARD ERROR CODES**.

Is DTC 1301 indicated?

YES : **REPLACE THE AUDIO-NAVIGATION UNIT**.

NO : Replace the original GPS antenna.

DTC 1302: GPS RECEIVER ERROR 1

GETtheMANUALS.org

Navigation System DTC Troubleshooting: 1302

Fig. 82: Navigation System DTC Troubleshooting Flow Chart (1302)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST.**
- **This navigation DTC sets when there is an internal GPS receiver problem.**
- **Aftermarket metallic window tint or electronic devices located near the audio-navigation unit or GPS antenna can potentially interfere with the operation of the navigation system.**
- **BEFORE YOU TROUBLESHOOT, MAKE SURE TO FOLLOW THE HOW TO TROUBLESHOOT THE NAVIGATION SYSTEM.**
- **Check any official Honda service website for more service information about the navigation system.**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
   - 1. **CLEAR THE HARD ERROR CODES**.
   - 2. Turn the ignition switch to LOCK (0) and then back to ON (II).
   - 3. **CHECK FOR HARD ERROR CODES**.

   Is DTC 1302 indicated?

   YES : The failure is duplicated, go to step 2.

   NO : Intermittent failure, the system is OK at this time.

2. Audio-navigation unit check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. **SUBSTITUTE A KNOWN-GOOD GPS ANTENNA**.
   - 3. **CLEAR THE HARD ERROR CODES**.

GETtheMANUALS.org

- 4. Turn the ignition switch to LOCK (0) and then back to ON (II).
- 5. **CHECK FOR HARD ERROR CODES**.

Is DTC 1302 indicated?

YES : **REPLACE THE AUDIO-NAVIGATION UNIT**.

NO : Replace the original GPS antenna.

DTC 1303: GPS RECEIVER ERROR 2

Fig. 83: Navigation System DTC Troubleshooting Flow Chart (1303)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST.**
- **This navigation DTC sets when there is an internal GPS receiver problem, or an open in GPS antenna lead.**
- **Aftermarket metallic window tint or electronic devices located near the audio-navigation unit or GPS antenna can potentially interfere with the operation of the navigation system.**
- **BEFORE YOU TROUBLESHOOT, MAKE SURE TO FOLLOW THE HOW TO TROUBLESHOOT THE NAVIGATION SYSTEM.**
- **Check any official Honda service website for more service information about the navigation system.**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
   - 1. **CLEAR THE HARD ERROR CODES**.
   - 2. Turn the ignition switch to LOCK (0) and then back to ON (II).
   - 3. **CHECK FOR HARD ERROR CODES**.

GETtheMANUALS.org

Is DTC 1303 indicated?

YES : The failure is duplicated, go to step 2.

NO : Intermittent failure, the system is OK at this time.

2. Audio-navigation unit check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. **SUBSTITUTE A KNOWN-GOOD GPS ANTENNA**.
   - 3. **CLEAR THE HARD ERROR CODES**.
   - 4. Turn the ignition switch to LOCK (0) and then back to ON (II).
   - 5. **CHECK FOR HARD ERROR CODES**.

Is DTC 1303 indicated?

YES : **REPLACE THE AUDIO-NAVIGATION UNIT** .

NO : Replace the original GPS antenna.

DTC 1304: GYRO ERROR 1

Fig. 84: Navigation System DTC Troubleshooting Flow Chart (1304)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **This navigation DTC sets when there is a problem with the internal gyro.**
- **BEFORE YOU TROUBLESHOOT, MAKE SURE TO FOLLOW THE HOW TO TROUBLESHOOT THE NAVIGATION SYSTEM.**
- **Check any official Honda service website for more service information about the navigation system.**

1. Problem verification:
   - 1. **CLEAR THE HARD ERROR CODES**.
   - 2. Turn the ignition switch to LOCK (0) and then back to ON (II), and wait at least 1 minute.

GETtheMANUALS.org

- 3. **CHECK FOR HARD ERROR CODES**.

Is DTC 1304 indicated?

YES : REPLACE THE AUDIO-NAVIGATION UNIT .

NO : Intermittent failure, the system is OK at this time.

DTC 1305: GYRO ERROR 2: ECU TEMP XX °C

Fig. 85: Navigation System DTC Troubleshooting Flow Chart (1305)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **This navigation DTC sets when there is a problem with the internal gyro, and indicates the navigation ECU temperature when the DTC is detected.**
- **BEFORE YOU TROUBLESHOOT, MAKE SURE TO FOLLOW THE HOW TO TROUBLESHOOT THE NAVIGATION SYSTEM.**
- **Check any official Honda service website for more service information about the navigation system.**

1. Problem verification:
   - 1. **CLEAR THE HARD ERROR CODES**.
   - 2. Turn the ignition switch to LOCK (0) and then back to ON (II), and wait at least 3 minutes.
   - 3. **CHECK FOR HARD ERROR CODES**.

Is DTC 1305 indicated?

YES : REPLACE THE AUDIO-NAVIGATION UNIT .

NO : Intermittent failure, the system is OK at this time.

DTC 1306: VEHICLE SPEED PULSE

GETtheMANUALS.org

Navigation System DTC Troubleshooting: 1306

Fig. 86: Navigation System DTC Troubleshooting Flow Chart (1306)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **This navigation DTC sets when there is a problem with the VSP circuit.**
- **Check for aftermarket accessories that may interfere with the navigation system.**
- **Check the GPS reception in an open area.**
- **Aftermarket metallic window tint or electronic devices located near the audio-navigation unit or GPS antenna can potentially interfere with the operation of the navigation system.**
- **BEFORE YOU TROUBLESHOOT, MAKE SURE TO FOLLOW THE HOW TO TROUBLESHOOT THE NAVIGATION SYSTEM.**

GETtheMANUALS.org

- **Check any official Honda service website for more service information about the navigation system.**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
   - 1. **CLEAR THE HARD ERROR CODES**.
   - 2. Test-drive the vehicle at steady speed more than 12 mph (20 km/h) for about 1 minute.
   - 3. **CHECK FOR HARD ERROR CODES**.

   Is DTC 1306 indicated?

   YES : The failure is duplicated, go to step 2.

   NO : Intermittent failure, the system is OK at this time.

2. Determine possible failure area (audio-navigation unit, others):
   - 1. **GO INTO THE SYSTEM DIAGNOSTIC MODE, AND SELECT THE CAR STATUS IN THE SYSTEM LINKS TO CHECK THE VEHICLE SPEED PULSE**.
   - 2. With the help of an assistant test-drive the vehicle, and watch the VSP signal.

   Does the VSP signal change from [0] (stopped) to [1] (driving) as you drive?

   YES : REPLACE THE AUDIO-NAVIGATION UNIT .

   NO : Go to step 3.

3. Determine possible failure area (VSP line, others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connector.

     PCM connector A (49P)

   - 4. Turn the ignition switch to ON (II).
   - 5. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     PCM connector A (49P): disconnected

     Test circuit VSP

     Test point 1 PCM connector A (49P) No. 26 (GRN)

GETtheMANUALS.org

Test point 2 Body ground

Fig. 87: Measuring Voltage Between PCM Connector A (49P) No. 26 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5 V?

YES : The VSP wire is OK. Go to step 5.

NO : Go to step 4.

4. Open wire check (VSP line):
   - 1. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     PCM connector A (49P): disconnected

     Test circuit VSP

     Test point 1 Audio-navigation unit connector A (24P) No. 23 (GRN)

     Test point 2 Body ground

Fig. 88: Measuring Voltage Between Audio-Navigation Unit Connector A (24P) No. 23 And

GETtheMANUALS.org

Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5 V?

YES : Repair an open in the wire between the audio-navigation unit and the PCM.

NO : REPLACE THE AUDIO-NAVIGATION UNIT .

5. PCM check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Reconnect PCM connector A (49P).
   - 3. Raise the vehicle on a lift.
   - 4. Turn the ignition switch to ON (II).
   - 5. Measure the voltage between test points 1 and 2.

   Test condition IG ON (II), with the tires slowly rotating

   Test circuit VSP

   Test point 1 Audio-navigation unit connector A (24P) No. 23 (GRN)

   Test point 2 Body ground

Fig. 89: Measuring Voltage Between Audio-Navigation Unit Connector A (24P) No. 23 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Does the voltage pulse between 0 V and 5 V as you rotate the tires?

YES : REPLACE THE AUDIO-NAVIGATION UNIT .

NO : **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , and recheck.

GETtheMANUALS.org

DTC 1701: REAR CAMERA ERROR

Fig. 90: Navigation System DTC Troubleshooting Flow Chart (1701)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **This navigation DTC sets when a problem is detected in the rearview camera circuit.**
- **BEFORE YOU TROUBLESHOOT, MAKE SURE TO FOLLOW THE HOW TO TROUBLESHOOT THE NAVIGATION SYSTEM.**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
   - 1. **CLEAR THE HARD ERROR CODES**.
   - 2. Turn the ignition switch to LOCK (0) and then back to ON (II).
   - 3. Move the shift lever to P or N.
   - 4. **CHECK FOR HARD ERROR CODES**.

   Is DTC 1701 indicated?

   YES : Go to step 2.

   NO : Intermittent failure, the system is OK at this time.

2. DTC check:
   - 1. **CHECK FOR HARD ERROR CODES**.

   Is DTC 2608 indicated?

   YES : **GO TO DTC 2608 TROUBLESHOOTING**.

GETtheMANUALS.org

NO : REPLACE THE AUDIO-NAVIGATION UNIT .

DTC 1702: XM ANTENNA ERROR

Fig. 91: Navigation System DTC Troubleshooting Flow Chart (1702)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **This navigation DTC sets when there is poor connectors or loose terminals at the XM antenna connector or an open in the XM antenna lead.**
- **BEFORE YOU TROUBLESHOOT, MAKE SURE TO FOLLOW THE HOW TO TROUBLESHOOT THE NAVIGATION SYSTEM.**
- **Check any official Honda service website for more service information about the navigation system.**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
   - 1. **CLEAR THE HARD ERROR CODES**.
   - 2. Turn the ignition switch to LOCK (0) and then back to ON (II).
   - 3. Turn on the audio system, and press the CD/XM button to select the XM radio.
   - 4. **CHECK FOR HARD ERROR CODES**.

Is DTC 1702 indicated?

YES : The failure is duplicated, go to **Error code: Check Antenna is displayed (Without Navigation)** or **Error code: Check Antenna is displayed (Navigation)** troubleshooting.

NO : Intermittent failure, the system is OK at this time.

DTC 2607: XM DIAG

GETtheMANUALS.org

Navigation System DTC Troubleshooting: 2607

Fig. 92: Navigation System DTC Troubleshooting Flow Chart (2607)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **This navigation DTC sets when a problem (open or short) is detected in the GA-Net BUS (the XM icon is red in the System Links).**
- **BEFORE YOU TROUBLESHOOT, MAKE SURE TO FOLLOW THE HOW TO TROUBLESHOOT THE NAVIGATION SYSTEM.**
- **Check any official Honda service website for more service information about the navigation system.**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
   - 1. **CLEAR THE HARD ERROR CODE**.
   - 2. Turn the ignition switch to LOCK (0) and then back to ON (II).
   - 3. **CHECK FOR THE HARD ERROR CODE**.

   Is DTC 2607 indicated?

   YES : The failure is duplicated, go to **XM radio display is blank and no station information is displayed (Navigation)** or **XM radio display is blank and no station information is displayed (Without Navigation)** troubleshooting.

   NO : Intermittent failure, the system is OK at this time.

DTC 2608: REAR CAMERA DIAG

GETtheMANUALS.org

Navigation System DTC Troubleshooting: 2608

Fig. 93: Navigation System DTC Troubleshooting Flow Chart (2608)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **This navigation DTC sets when NG is indicated in the Rear Camera diagnosis (the Rear Camera icon is red in the System Links).**
- **BEFORE YOU TROUBLESHOOT, MAKE SURE TO FOLLOW THE HOW TO TROUBLESHOOT THE NAVIGATION SYSTEM.**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
   - 1. **CLEAR THE HARD ERROR CODES**.
   - 2. Turn the ignition switch to LOCK (0) and then back to ON (II).
   - 3. **CHECK FOR HARD ERROR CODES**.

   Is DTC 2608 indicated?

GETtheMANUALS.org

YES : The failure is duplicated, go to step 2.

NO : Intermittent failure, the system is OK at this time.

2. Determine possible failure area (CAMERA ADPT line, others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Rearview camera 12P connector

   - 3. Turn the ignition switch to ON (II).
   - 4. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     Rearview camera 12P connector: disconnected

     Test circuit CAMERA ADPT

     Test point 1 Rearview camera 12P connector No. 11 (YEL)

     Test point 2 Body ground

Fig. 94: Measuring Voltage Between Rearview Camera 12P Connector No. 11 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 3.0 V?

YES : Go to step 4.

NO : Go to step 3.

3. Open wire check (CAMERA ADPT line):
   - 1. Measure the voltage between test points 1 and 2.

GETtheMANUALS.org

Test condition IG ON (II)

Rearview camera 12P connector: disconnected

Test circuit CAMERA ADPT

Test point 1 Audio-navigation unit connector F (7P) No. 1 (BLK)

Test point 2 Body ground

Fig. 95: Measuring Voltage Between Audio-Navigation Unit Connector F (7P) No. 1 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 3.0 V?

YES : Repair an open in the wire between the audio-navigation unit and the rearview camera.

NO : REPLACE THE AUDIO-NAVIGATION UNIT .

4. Open wire check (CAMERA GND line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Audio-navigation unit connector F (7P)

   - 3. Connect terminals A and B with a jumper wire.

     Terminal A Rearview camera 12P connector No. 7 (BLK)

     Terminal B Body ground

GETtheMANUALS.org

Fig. 96: Connecting Rearview Camera 12P Connector No. 7 And Body Ground Using Jumper Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 4. Check for continuity between test points 1 and 2.

  Test condition IG LOCK (0)

  Rearview camera 12P connector: disconnected

  Audio-navigation unit connector F (7P): disconnected

  Rearview camera 12P connector No. 7: jumped to body ground

  Test circuit CAMERA GND

  Test point 1 Audio-navigation unit connector F (7P) No. 6 (GRN)

  Test point 2 Body ground

Fig. 97: Checking Continuity Between Audio-Navigation Unit Connector F (7P) No. 6 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : **REPLACE THE REARVIEW CAMERA** .

GETtheMANUALS.org

NO : Repair an open in the wire between the audio-navigation unit and the rearview camera.

DTC 2610: DRAM DIAG

Fig. 98: Navigation System DTC Troubleshooting Flow Chart (2610)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **This navigation DTC sets when a problem with the internal DRAM is detected (the ECU info icon is red in the System Links).**
- **BEFORE YOU TROUBLESHOOT, MAKE SURE TO FOLLOW THE HOW TO TROUBLESHOOT THE NAVIGATION SYSTEM.**
- **Check any official Honda service website for more service information about the navigation system.**

1. Problem verification:
   - 1. **CLEAR THE HARD ERROR CODES**.
   - 2. Turn the ignition switch to LOCK (0) and then back to ON (II).
   - 3. **CHECK FOR HARD ERROR CODES**.

   Is DTC 2610 indicated?

   YES : REPLACE THE AUDIO-NAVIGATION UNIT .

   NO : Intermittent failure, the system is OK at this time.

DTC 2701: GPS DIAG: ANTENNA

GETtheMANUALS.org

Navigation System DTC Troubleshooting: 2701

Fig. 99: Navigation System DTC Troubleshooting Flow Chart (2701)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **This navigation DTC sets when a problem is detected in the GPS antenna (the GPS Ant icon is red in the System Links).**
- **BEFORE YOU TROUBLESHOOT, MAKE SURE TO FOLLOW THE HOW TO TROUBLESHOOT THE NAVIGATION SYSTEM.**
- **Check any official Honda service website for more service information about the navigation system.**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
   - 1. **CLEAR THE HARD ERROR CODES**.
   - 2. Turn the ignition switch to LOCK (0) and then back to ON (II).
   - 3. **CHECK FOR HARD ERROR CODES**.

   Is DTC 2701 indicated?

   YES : The failure is duplicated, go to step 2.

   NO : Intermittent failure, the system is OK at this time.

2. Determine possible failure area (GPS antenna lead, others):
   - 1. Turn the ignition switch to LOCK (0).

GETtheMANUALS.org

- 2. **SUBSTITUTE A KNOWN-GOOD GPS ANTENNA LEAD**.
- 3. **CLEAR THE HARD ERROR CODES**.
- 4. Turn the ignition switch to LOCK (0) and then back to ON (II).
- 5. **CHECK FOR HARD ERROR CODES**.

Is DTC 2701 indicated?

YES : Go to step 3.

NO : Replace the original GPS antenna lead.

3. Audio-navigation unit check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. **SUBSTITUTE A KNOWN-GOOD GPS ANTENNA**.
   - 3. **CLEAR THE HARD ERROR CODES**.
   - 4. Turn the ignition switch to LOCK (0) and then back to ON (II).
   - 5. **CHECK FOR HARD ERROR CODES**.

Is DTC 2701 indicated?

YES : **REPLACE THE AUDIO-NAVIGATION UNIT**.

NO : Replace the original GPS antenna.

DTC 2702: GPS DIAG: RECEIVER IN NAVI ECU

Fig. 100: Navigation System DTC Troubleshooting Flow Chart (2702)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **This navigation DTC sets when a problem is detected in the internal GPS receiver.**
- **BEFORE YOU TROUBLESHOOT, MAKE SURE TO FOLLOW THE HOW TO TROUBLESHOOT THE NAVIGATION SYSTEM.**

GETtheMANUALS.org

- **Check any official Honda service website for more service information about the navigation system.**

1. Problem verification:
   - 1. **CLEAR THE HARD ERROR CODES**.
   - 2. Turn the ignition switch to LOCK (0) and then back to ON (II).
   - 3. **CHECK FOR HARD ERROR CODES**.

   Is DTC 2702 indicated?

   YES : REPLACE THE AUDIO-NAVIGATION UNIT .

   NO : Intermittent failure, the system is OK at this time.

DTC 2703: AIRCON DIAG

Fig. 101: Navigation System DTC Troubleshooting Flow Chart (2703)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **This navigation DTC sets when NG is indicated in the Aircon diagnosis (the A/C icon is red in the System Links).**
- **Check for B-CAN DTCs and resolve them before troubleshooting.**
- **BEFORE YOU TROUBLESHOOT, MAKE SURE TO FOLLOW THE HOW TO TROUBLESHOOT THE NAVIGATION SYSTEM.**

GETtheMANUALS.org

1. Problem verification:
    - 1. **CLEAR THE HARD ERROR CODES**.
    - 2. Turn the ignition switch to LOCK (0) and then back to ON (II).
    - 3. **CHECK FOR HARD ERROR CODES**.

    Is DTC 2703 indicated?

    YES : The failure is duplicated, go to step 2.

    NO : Intermittent failure, the system is OK at this time.

2. Open wire check (B CAN-H line, B CAN-L line):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Disconnect the following connectors.

      Audio-navigation unit connector B (24P)

      Climate control unit 32P connector

    - 3. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      Audio-navigation unit connector B (24P): disconnected

      Climate control unit 32P connector: disconnected

      Test circuit B CAN-H

      Test point 1 Audio-navigation unit connector E (16P) No. 1 (PNK)

      Test point 2 Climate control unit 32P connector No. 16 (PNK)

      Test circuit B CAN-L

      Test point 1 Audio-navigation unit connector E (16P) No. 9 (BLU)

      Test point 2 Climate control unit 32P connector No. 15 (BLU)

GETtheMANUALS.org

Fig. 102: Checking Continuity Between Audio-Navigation Unit Connector E (16P) And Climate Control Unit 32P Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Go to step 3.

NO : Repair an open in the wire(s) between the audio-navigation unit and the climate control unit.

3. Audio-navigation unit check:
   - 1. **SUBSTITUTE A KNOWN-GOOD CLIMATE CONTROL UNIT** , and recheck.

Does the symptom/indication go away?

YES : Replace the original climate control unit.

NO : REPLACE THE AUDIO-NAVIGATION UNIT .

DTC 2705: HFL DIAG

GETtheMANUALS.org

Fig. 103: Navigation System DTC Troubleshooting Flow Chart (2705)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **This navigation DTC sets when NG is indicated in the HFL diagnosis (the HFL icon is red in the System Links).**
- **BEFORE YOU TROUBLESHOOT, MAKE SURE TO FOLLOW THE HOW TO TROUBLESHOOT THE NAVIGATION SYSTEM.**
- **Check any official Honda service website for more service information about the navigation system.**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
   - 1. **CLEAR THE HARD ERROR CODES**.
   - 2. Turn the ignition switch to LOCK (0) and then back to ON (II).
   - 3. **CHECK FOR HARD ERROR CODES**.

   Is DTC 2705 indicated?

   YES : The failure is duplicated, go to step 2.

   NO : Intermittent failure, the system is OK at this time.

2. Determine possible failure area (GA-NET circuit, others):

GETtheMANUALS.org

- 1. **SELECT THE HFL IN THE SYSTEM LINKS, AND CHECK FOR GA-NET STATUS**.

Is GA-NET NG indicated?

YES : Go to **HFL does not respond (Navigation)** or **HFL does not respond (Without Navigation)** .

NO : Go to step 3.

3. HandsFreeLink system DTC check:
   - 1.

     SELECT THE HFL IN THE SYSTEM LINKS, AND CHECK FOR HFL DTC.

Is DTC B1792 indicated?

YES : **GO TO B1792 TROUBLESHOOTING** .

NO : REPLACE THE AUDIO-NAVIGATION UNIT .

DTC 2706: GYRO DIAG: ECU TEMP XX °C

Fig. 104: Navigation System DTC Troubleshooting Flow Chart (2706)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **This navigation DTC sets when there is a problem with the internal gyro (the Yaw Sensor icon is red in the System Links), and indicates the navigation ECU temperature when the DTC is detected.**
- **BEFORE YOU TROUBLESHOOT, MAKE SURE TO FOLLOW THE HOW TO TROUBLESHOOT THE NAVIGATION SYSTEM.**
- **Check any official Honda service website for more service information about the navigation system.**

1. Problem verification:
   - 1. **CLEAR THE HARD ERROR CODES**.

GETtheMANUALS.org

- 2. Turn the ignition switch to LOCK (0) and then back to ON (II).
- 3. **CHECK FOR HARD ERROR CODES**.

Is DTC 2706 indicated?

YES : REPLACE THE AUDIO-NAVIGATION UNIT .

NO : Intermittent failure, the system is OK at this time.

DTC 2707: MIC DIAG

GETtheMANUALS.org

Navigation System DTC Troubleshooting: 2707

Fig. 105: Navigation System DTC Troubleshooting Flow Chart (2707)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**

GETtheMANUALS.org

- **This navigation DTC sets when a problem is detected in the microphone circuit (the Mic icon is red in the System Links).**
- **BEFORE YOU TROUBLESHOOT, MAKE SURE TO FOLLOW THE HOW TO TROUBLESHOOT THE NAVIGATION SYSTEM.**
- **Check any official Honda service website for more service information about the navigation system.**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
   - 1. **CLEAR THE HARD ERROR CODES**.
   - 2.

     Turn the ignition switch to LOCK (0) and then back to ON (II).

   - 3. **CHECK FOR HARD ERROR CODES**.

   Is DTC 2707 indicated?

   YES : The failure is duplicated, go to step 2.

   NO : Intermittent failure, the system is OK at this time.

2. HandsFreeLink system DTC check 1:
   - 1. **SELECT THE HFL IN THE SYSTEM LINKS, AND CHECK FOR HFL DTC**.

   Is DTC B1792 indicated?

   YES : **GO TO B1792 TROUBLESHOOTING** .

   NO : Go to step 3.

3. HandsFreeLink system DTC check 2:
   - 1. **SELECT THE MIC/STRG SW IN THE FUNCTIONAL SETUP MENU, AND CHECK FOR HFL DTCS**.

   Are any HFL DTCs indicated?

   YES : Go to indicated HFL DTC troubleshooting.

   NO : Go to step 4.

4. Determine possible failure area (audio-navigation unit, others):
   - 1. **SELECT THE MIC/STRG SW IN THE FUNCTIONAL SETUP MENU, AND USE THE MIC LEVEL TEST**.

GETtheMANUALS.org

Is the microphone level OK?

YES : REPLACE THE AUDIO-NAVIGATION UNIT .

NO : Go to step 5.

5. Open wire check (HFT-NAVI MIC+ line, HFT-NAVI MIC- line):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Disconnect the following connector.

      Audio-navigation unit connector B (20P)

      HandsFreeLink control unit 32P connector

    - 3. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      Audio-navigation unit connector E (16P): disconnected

      HandsFreeLink control unit 32P connector: disconnected

      Test circuit HFT-NAVI MIC+

      Test point 1 Audio-navigation unit connector B (20P) No. 11 (BRN)

      Test point 2 HandsFreeLink control unit 32P connector No. 18 (BRN)

      Test circuit HFT-NAVI MIC-

      Test point 1 Audio-navigation unit connector B (20P) No. 12 (YEL)

      Test point 2 HandsFreeLink control unit 32P connector No. 17 (YEL)

GETtheMANUALS.org

Fig. 106: Checking Continuity Between Audio-Navigation Unit Connector B (20P) And Handsfreelink Control Unit 32P Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The HFT-NAVI MIC+ and the HFT-NAVI MIC- wires are OK. Go to step 6.

NO : There is an open in the wire(s) between the HandsFreeLink control unit and the audio-navigation unit. Replace the affected shielded harness.

6. Determine possible failure area (HFL-navigation microphone, others):
   - 1. Reconnect the HandsFreeLink control unit 32P connector and audio-navigation unit connector B (20P).
   - 2. **SUBSTITUTE A KNOWN-GOOD HFL-NAVIGATION MICROPHONE** , and recheck.

Does the symptom/indication go away?

YES : Replace the original HFL-navigation microphone.

NO : Go to step 7.

7. Audio-navigation unit check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. **Substitute a known-good HandsFreeLink control unit** See **HANDSFREELINK CONTROL UNIT REMOVAL AND INSTALLATION** or **HANDSFREELINK CONTROL UNIT UPDATE** , and recheck.

Does the symptom/indication go away?

GETtheMANUALS.org

YES : Replace the original HandsFreeLink control unit.

NO : REPLACE THE AUDIO-NAVIGATION UNIT .

SYMPTOM TESTS

DISPLAY DAY/NIGHT MODE DOES NOT WORK OR DOES NOT WORK PROPERLY

Fig. 107: Navigation System DTC Troubleshooting Flow Chart (Display Day/Night Mode Does Not Work/Does Not Work Properly)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **Full brightness on the dashlights brightness control with the head lights turned on causes the system to stay in the day mode, even when the lights are on.**
- **Check for B-CAN DTCs and resolve them before troubleshooting.**
- **The navigation system receives the dash brightness/dimming signal from the B-CAN network from the gauge control module. Check for B-CAN DTCs and resolve them before troubleshooting.**
- **Check any official Honda service website for more service information about the navigation system.**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
    - 1. Turn the ignition switch to ON (II).

GETtheMANUALS.org

- 2. Turn the combination lighting switch to the parking light position.
- 3. Turn the dash brightness knob to the mid brightness level (the display does not change if the brightness level is set to max).

Does the display change to day and night modes when turning the headlights on and off?

YES : Intermittent failure, the system is OK at this time. Explain to the customer that if the display brightness is set to max, the display does not change.

NO : The failure is duplicated, go to step 2.

2. Determine possible failure area (audio-navigation unit, others):
   - 1. Turn the combination lighting switch off.
   - 2. **GO INTO THE SYSTEM DIAGNOSTIC MODE, AND USE THE CAR STATUS DIAGNOSIS TO CHECK THE ILL SIGNAL**.
   - 3. Turn the combination lighting switch to the parking light position.

Does the ILL signal change from [0] to [1] when the combination lighting switch is changed to the parking light position?

YES : REPLACE THE AUDIO-NAVIGATION UNIT .

NO : Go to step 3.

3. Open wire check (B CAN-H line, B CAN-L line):
   - 1. Turn the combination lighting switch off.
   - 2. Turn the ignition switch to LOCK (0).
   - 3. Disconnect the following connectors.

     Audio-navigation unit connector E (16P)

     Gauge control module 32P connector

   - 4. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Audio-navigation unit connector E (16P): disconnected

     Gauge control module 32P connector: disconnected

     Test circuit B CAN-H

     Test point 1 Audio-navigation unit connector E (16P) No. 1 (PNK)

GETtheMANUALS.org

Test point 2 Gauge control module 32P connector No. 30 (PNK)

Test circuit B CAN-L

Test point 1 Audio-navigation unit connector E (16P) No. 9 (BLU)

Test point 2 Gauge control module 32P connector No. 31 (BLU)

Fig. 108: Checking Continuity Between Audio-Navigation Unit Connector E (16P) And Gauge Control Module 32P Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : REPLACE THE AUDIO-NAVIGATION UNIT .

NO : Repair an open in the wire(s) between the audio-navigation unit and the gauge control module.

GPS ICON IS WHITE OR NOT SHOWN

GETtheMANUALS.org

Navigation System Symptom Troubleshooting - GPS icon is white or not shown

Fig. 109: Navigation System DTC Troubleshooting Flow Chart (GPS Icon Is White Or Not Shown)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **Refer to GPS INFORMATION for real-time satellite reception display.**
- **Check the GPS signal reception in an open area. With good reception, the icon is normally green.**
- **Check any official Honda service website for more service information about the navigation system.**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
    - 1. Park the vehicle in an open area.
    - 2. Turn the ignition switch to ON (II).

GETtheMANUALS.org

- 3. Check the GPS icon on the map screen.

Is the GPS icon missing?

YES : The failure is duplicated, go to step 2.

NO : Intermittent failure, the system is OK at this time.

2. Determine possible failure area (accessories, others):
   - 1.

     Turn the ignition switch to LOCK (0).

   - 2. Check for aftermarket metallic window tint on the front window and electronic aftermarket accessories (possibly hidden) mounted near the GPS antenna or the audio-navigation unit.

Is there aftermarket metallic window tint or electronic accessories?

YES : Remove tint or the accessories, and recheck.

NO : Go to step 3.

3. DTC check:
   - 1. **CHECK FOR HARD ERROR CODES**.

Are there any navigation DTCs indicated?

YES : Go to indicated DTC's troubleshooting.

NO : Go to step 4.

4. Determine possible failure area (reception, others):
   - 1. **GO INTO THE SYSTEM DIAGNOSTIC MODE, AND USE THE GPS INFORMATION DIAGNOSIS TO CHECK THE GPS RECEPTION**.

Are there 4 or more GPS satellite icon displayed?

YES : Go to step 5.

NO : Move the vehicle (make sure you're in an open area away from buildings, power lines, other vehicles, and any other sources of strong magnetic fields), and recheck. Make sure that other vehicles with navigation receive a signal in the same location under the same conditions.

5. Audio-navigation unit check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. **SUBSTITUTE A KNOWN-GOOD GPS ANTENNA**, and recheck.

GETtheMANUALS.org

Does the symptom go away?

YES : Replace the original GPS antenna.

NO : REPLACE THE AUDIO-NAVIGATION UNIT .

NAVIGATION CANNOT CONTROL HVAC BY VOICE COMMAND

Fig. 110: Navigation System DTC Troubleshooting Flow Chart (Navigation Cannot Control HVAC By Voice Command)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **VERIFY THAT THE CORRECT AUDIO-NAVIGATION UNIT IS INSTALLED FOR THIS MODEL. GO INTO THE SYSTEM DIAGNOSTIC MODE, AND USE THE NAVI ECU.**
- **Check for B-CAN DTCs and resolve them before troubleshooting.**
- **Check any official Honda service website for more service information about the navigation system.**
- **Check the connectors for poor connections or loose terminals.**

1. Determine possible failure area (climate control system, others):

GETtheMANUALS.org

- 1. Start the engine.
- 2. Check the climate control system operation.

Does the system operate properly?

YES : Go to step 2.

NO : Refer to the climate control system symptom troubleshooting.

2. Problem verification:
   - 1. Pressing the TALK button, then give a voice command "Climate control" clearly in a natural speaking voice.

Does the climate control system turn on by the voice command?

YES : Intermittent failure, the system is OK at this time. Direct customers to review the available voice commands in the navigation manual.

NO : The failure is duplicated, go to step 3.

3. DTC check:
   - 1. **CHECK FOR HARD ERROR CODES**.

Are there any navigation DTCs indicated?

YES : Go to indicated DTC's troubleshooting.

NO : Go to step 4.

4. Audio-navigation unit check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. **SUBSTITUTE A KNOWN-GOOD CLIMATE CONTROL UNIT** , and recheck.

Does the symptom go away?

YES : Replace the original climate control unit.

NO : REPLACE THE AUDIO-NAVIGATION UNIT .

NAVIGATION DISPLAY BUTTONS DO NOT WORK OR RESPOND PROPERLY

GETtheMANUALS.org

Navigation System Symptom Troubleshooting - Navigation display buttons do not work or respond properly

Fig. 111: Navigation System DTC Troubleshooting Flow Chart (Navigation Display Buttons Do Not Work Or Respond Properly)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **VERIFY THAT THE CORRECT AUDIO-NAVIGATION UNIT IS INSTALLED FOR THIS MODEL. GO INTO THE SYSTEM DIAGNOSTIC MODE, AND USE THE NAVI ECU.**
- **Check any official Honda service website for more service information about the navigation system.**

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Check if the navigation system operate properly by touching the display.

   Does the system operate properly?

   YES : Intermittent failure, the system is OK at this time.

   NO : The failure is duplicated, go to step 2.

2. Audio-navigation unit check:
   - 1. **GO INTO THE SYSTEM DIAGNOSTIC MODE, AND USE THE TOUCH PANEL CALIBRATION UNDER THE MONITOR CHECK MENU**.

   Does the symptom go away?

   YES : Troubleshooting is complete.

   NO : REPLACE THE AUDIO-NAVIGATION UNIT .

GETtheMANUALS.org

NAVIGATION DISPLAY STAYS ON WITH IGNITION SWITCH IN LOCK (0)

Fig. 112: Navigation System DTC Troubleshooting Flow Chart (Navigation Display Stays On With Ignition Switch In Lock)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Check for aftermarket accessories that may interfere with the navigation system.**
- **The vehicle may have been used for a show event. Check for a short jumper harness in-line with audio-navigation unit connector A (24P). If a jumper harness is present, remove it, and return it to Tech Line.**
- **Check any official Honda service website for more service information about the navigation system.**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
   - 1. Remove the key from the ignition.

   Does the navigation screen stay on?

   YES : The failure is duplicated, go to step 2.

   NO : Intermittent failure, the system is OK at this time.

2. Shorted wire check (ACC line to power):
   - 1. Measure the voltage between test points 1 and 2.

     Test condition IG LOCK (0)

     Test circuit ACC

GETtheMANUALS.org

Test point 1 Audio-navigation unit connector A (24P) No. 24 (PUR)

Test point 2 Body ground

Fig. 113: Measuring Voltage Between Audio-Navigation Unit Connector A (24P) No. 24 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : Repair a short to power in the wire between the No. B19 (7.5 A) fuse in the under-dash fuse/relay box and the audio-navigation unit.

NO : REPLACE THE AUDIO-NAVIGATION UNIT .

NAVIGATION FREQUENTLY ASKS FOR ANTI-THEFT CODE AND/OR NEEDS GPS INITIALIZATION

Fig. 114: Navigation System DTC Troubleshooting Flow Chart (Navigation Frequently Asks For Anti-Theft Code And/Or Needs GPS Initialization)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

NOTE:

- **<u>CHECK THE VEHICLE BATTERY CONDITION FIRST</u> .**
- **Check any official Honda service website for more service information about the navigation system.**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
   - 1. Check if the Anti-Theft System screen or the CSF (GPS Initialization) screen is displayed every time the ignition switch is turned to ON (II).

   Is Anti-Theft System screen or CSF screen displayed every time?

   YES : The failure is duplicated, go to step 2.

   NO : Intermittent failure, the system is OK at this time.

2. Open wire check (GND line):
   - 1. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     Test circuit GND

     Test point 1 Audio-navigation unit connector A (24P) No. 1 (BLK)

     Test point 2 Body ground

     Test circuit GND

     Test point 1 Audio-navigation unit connector B (20P) No. 20 (BLK)

     Test point 2 Body ground

<u>Fig. 115: Measuring Voltage Between Audio-Navigation Unit Connector A (24P) No. 1 And Body Ground</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

Fig. 116: Measuring Voltage Between Audio-Navigation Unit Connector A (20P) No. 20 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 0.2 V?

YES : The GND wires are OK. Go to step 3.

NO : Repair an open or high resistance in the wire(s) between the audio-navigation unit and body ground (G502) and/or body ground (G503).

3. DTC check:
   - 1. **CHECK FOR HARD ERROR CODES**.

Are there any navigation DTCs indicated?

YES : Go to indicated DTC's troubleshooting.

NO : REPLACE THE AUDIO-NAVIGATION UNIT .

NO PICTURE IS DISPLAYED

GETtheMANUALS.org

Navigation System Symptom Troubleshooting - No picture is displayed

Fig. 117: Navigation System DTC Troubleshooting Flow Chart (No Picture Is Displayed)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **Check if the Day/Night ( ) button has been pressed, and turned off the display (see the Navigation Manual for more information).**
- **Check any official Honda service website for more service information about the navigation system.**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Check if the navigation display indicates any error message.

Is an error message displayed?

YES : **REFER TO THE Error Messages**.

GETtheMANUALS.org

NO : The failure is duplicated, go to step 2.

2. Fuse check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check the following fuses.

     Fuse No. A29 (10 A)

     Location Under-hood fuse/relay box

     Fuse No. B19 (7.5 A)

     Location Under-dash fuse/relay box

Are the fuses OK?

YES : Go to step 3.

NO : Replace the fuse(s), and recheck. If the fuse(s) blows again, check for a short in the No. A29 (10 A) fuse and/or the No. B19 (7.5 A) fuse circuit(s).

3. Open wire check (+B BACK UP line):
   - 1. Measure the voltage between test points 1 and 2.

     Test condition IG LOCK (0)

     Test circuit +B BACK UP

     Test point 1 Audio-navigation unit connector A (24P) No. 3 (RED)

     Test point 2 Body ground

     Test circuit +B BACK UP

     Test point 1 Audio-navigation unit connector B (20P) No. 10 (RED)

     Test point 2 Body ground

GETtheMANUALS.org

Fig. 118: Measuring Voltage Between Audio-Navigation Unit Connector A (24P) No. 3 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 119: Measuring Voltage Between Audio-Navigation Unit Connector B (20P) No. 10 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The +B BACK UP wires are OK. Go to step 4.

NO : Repair an open or high resistance in the wire(s) between the No. A29 (10 A) fuse in the under-hood fuse/relay box and the audio-navigation unit.

4. Open wire check (ACC line):
   - 1. Turn the ignition switch to ON (II).
   - 2. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     Test circuit ACC

     Test point 1 Audio-navigation unit connector A (24P) No. 24 (PUR)

     Test point 2 Body ground

GETtheMANUALS.org

Fig. 120: Measuring Voltage Between Audio-Navigation Unit Connector A (24P) No. 24 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The ACC wire is OK. Go to step 5.

NO : Repair an open or high resistance in the wire between the No. B19 (7.5 A) fuse in the under-dash fuse/relay box and the audio-navigation unit.

5. Open wire check (GND line):
   - 1. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     Test circuit GND

     Test point 1 Audio-navigation unit connector A (24P) No. 1 (BLK)

     Test point 2 Body ground

     Test circuit GND

     Test point 1 Audio-navigation unit connector B (20P) No. 20 (BLK)

     Test point 2 Body ground

GETtheMANUALS.org

Fig. 121: Measuring Voltage Between Audio-Navigation Unit Connector A (24P) No. 1 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 122: Measuring Voltage Between Audio-Navigation Unit Connector B (20P) No. 20 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 0.2 V?

YES : REPLACE THE AUDIO-NAVIGATION UNIT .

NO : Repair an open or high resistance in the wire(s) between the audio-navigation unit and body ground (G502) and/or body ground (G503).

PICTURE HAS LINES/ROLLS/OTHER ISSUES OR IS AN ODD COLOR

GETtheMANUALS.org

Navigation System Symptom Troubleshooting - Picture has lines/rolls/other issues or is an odd color

Fig. 123: Navigation System DTC Troubleshooting Flow Chart (Picture Has Lines/Rolls/Other Issues Or Odd Color)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **Always compare the screen image to a known-good vehicle. If the screen looks the same, inform the customer that it is a characteristic of the system.**
- **Check the navigation screen settings for brightness, contrast, black level, and check the color screen for map color and menu color.**
- **Check any official Honda service website for more service information about the navigation system.**

1. Determine possible failure area (accessories, others):

GETtheMANUALS.org

- 1. Check for any electronic aftermarket accessories (possibly hidden) mounted near the audio-navigation unit.

Are there any electronic accessories?

YES : Remove the accessories, and recheck.

NO : Go to step 2.

2. Determine possible failure area (SYNC, others):
   - 1. Start the engine.
   - 2. Start up the navigation screen, and check it.

Is the picture scrolling horizontally (left to right or right to left), have lines across the screen, or is blurry?

YES : Go to step 5.

NO : Go to step 3.

3. Problem verification:
   - 1. Check the navigation screen.

Is the picture an odd color?

YES : The failure is duplicated, go to step 4.

NO : Intermittent failure, the system is OK at this time.

4. Audio-navigation unit check:
   - 1. **GO INTO THE SYSTEM DIAGNOSTIC MODE, AND USE THE RGB COLOR DIAGNOSIS UNDER THE MONITOR CHECK MENU**.

Are the red, green, and blue colored circle shown?

YES : Intermittent failure, the system is OK at this time.

NO : REPLACE THE AUDIO-NAVIGATION UNIT .

5. Audio-navigation unit check:
   - 1. Turn the ignition switch to LOCK (0) and then back to ON (II), and observe the navigation picture.

Did the image improve?

YES : Check for sources of electrical noise, such as charging system or ignition system.

GETtheMANUALS.org

NO : REPLACE THE AUDIO-NAVIGATION UNIT .

POOR RDS-TMC RECEPTION OR INTERFERENCE

Fig. 124: Navigation System DTC Troubleshooting Flow Chart (Poor RDS-TMC Reception Or Interference)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **Check for aftermarket accessories including cell phones and chargers plugged into the vehicle accessory power sockets.**
- **For more information about TMC (traffic) including a list of frequently asked questions, go to hondacars.com/traffic.**
- **Check the RDS-TMC reception in an open area. Poor reception/interference can be caused by the following;**
  - **The RDS-TMC station is too far away**

GETtheMANUALS.org

    - **Atmospheric condition are unfavorable**
    - **Tall buildings, mountains, or high-voltage power lines are nearby**
  - **Make sure you compare the traffic function to a known-good vehicle under the same conditions because the problem may be the traffic signal, not the vehicle.**
  - **Check any official Honda service website for more service information about the navigation system.**
  - **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
    - 1. Turn the ignition switch to ON (II).
    - 2. Check if the TMC information is displayed on the navigation map screen.

   Is the TMC information displayed?

   YES : Intermittent failure, the system is OK at this time.

   NO : The failure is duplicated, go to step 2.

2. Determine possible failure area (AM/FM, others):
    - 1. Turn on the audio system, and set the proper AM or FM radio station.

   Does the AM or the FM radio play?

   YES : Go to step 3.

   NO : Go to **Poor AM or FM radio reception or interference (Navigation)** troubleshooting.

3. RDS on check:
    - 1. Check that the RDS-TMC (traffic is turned on (refer to the O/M).

   Is the RDS-TMC turned on?

   YES : Go to step 4.

   NO : Turn on the RDS and recheck.

4. TMC (Traffic) Status check
    - 1. **ENTER THE SYSTEM DIAGNOSTIC MODE** and check the TMC (Traffic) status.

GETtheMANUALS.org

Fig. 125: Display - TMC Status Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Does the TMC error status indicate 0?

YES : Go to step 5.

NO : Repair the indicated error.

5. Audio-navigation unit check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. SUBSTITUTE A KNOWN-GOOD FM DISTRIBUTOR , and recheck.

Does the symptom go away?

YES : Replace the original FM distributor.

NO : REPLACE THE AUDIO-NAVIGATION UNIT .

REARVIEW CAMERA IMAGE DOES NOT CHANGE

GETtheMANUALS.org

Navigation System Symptom Troubleshooting - Rearview camera image does not change

Fig. 126: Navigation System DTC Troubleshooting Flow Chart (Rearview Camera Image Does Not Change)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **You can select three different rearview camera angles for backing up. If there is no camera image on the display, go to Rearview camera image does not come on or work properly troubleshooting.**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Move the shift lever to R.
   - 3. Press the ENTER button to see if the rearview image changes between the wide view, the normal view, and the top down view in this order.

GETtheMANUALS.org

Does the rearview camera image change properly?

YES : Intermittent failure, the system is OK at this time.

NO : The failure is duplicated, go to step 2.

2. Shorted wire check (CAMERA BIT0 line, CAMERA BIT1 line):
    - 1. Move the shift lever to P or N.
    - 2. Turn the ignition switch to LOCK (0).
    - 3. Disconnect the following connector.

      Audio-navigation unit connector B (20P)

      Rearview camera 12P connector

    - 4. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      Audio-navigation unit connector B (20P): disconnected

      Rearview camera 12P connector: disconnected

      Test circuit CAMERA BIT0

      Test point 1 Rearview camera 12P connector No. 2 (GRN)

      Test point 2 Body ground

      Test circuit CAMERA BIT1

      Test point 1 Rearview camera 12P connector No. 1 (BLU)

      Test point 2 Body ground

GETtheMANUALS.org

Fig. 127: Checking Continuity Between Rearview Camera 12P Connector No. 1, 2 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to body ground in the wire(s) between the rearview camera and the audio-navigation unit.

NO : The CAMERA BIT0 and the CAMERA BIT1 wires are not shorted to ground. Go to step 3.

3. Shorted wire check (CAMERA BIT0 line, CAMERA BIT1 line):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Audio-navigation unit connector B (20P): disconnected

     Rearview camera 12P connector: disconnected

     Test circuit CAMERA BIT0, CAMERA BIT1

     Test point 1 Rearview camera 12P connector No. 2 (GRN)

     Test point 2 Rearview camera 12P connector No. 1 (BLU)

Fig. 128: Checking Continuity Between Rearview Camera 12P Connector No. 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short in the wires between the rearview camera and the audio-navigation unit.

NO : The CAMERA BIT0 and the CAMERA BIT1 wires are not shorted. Go to step 4.

4. Open wire check (CAMERA BIT0 line, CAMERA BIT1 line):
   - 1. Check for continuity between test points 1 and 2.

GETtheMANUALS.org

Test condition IG LOCK (0)

Audio-navigation unit connector B (20P): disconnected

Rearview camera 12P connector: disconnected

Test circuit CAMERA BIT0

Test point 1 Audio-navigation unit connector B (20P) No. 4 (GRN)

Test point 2 Rearview camera 12P connector No. 2 (GRN)

Test circuit CAMERA BIT1

Test point 1 Audio-navigation unit connector B (20P) No. 15 (BLU)

Test point 2 Rearview camera 12P connector No. 1 (BLU)

Fig. 129: Checking Continuity Between Audio-Navigation Unit Connector B (20P) And Rearview Camera 12P Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The CAMERA BIT0 and the CAMERA BIT1 wires are OK. Go to step 5.

NO : Repair an open in the wire(s) between the rearview camera and the audio-navigation unit.

5. Audio-navigation unit check:
    - 1. Turn the ignition switch to LOCK (0).

GETtheMANUALS.org

- 2. SUBSTITUTE A KNOWN-GOOD AUDIO-NAVIGATION UNIT , and recheck.

Does the symptom go away?

YES : Replace the original audio-navigation unit.

NO : **REPLACE THE REARVIEW CAMERA** .

REARVIEW CAMERA IMAGE DOES NOT COME ON OR WORK PROPERLY

GETtheMANUALS.org

Navigation System Symptom Troubleshooting - Rearview camera image does not come on or work properly

Fig. 130: Navigation System DTC Troubleshooting Flow Chart (Rearview Camera Image Does Not Come On Or Work Properly)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**

GETtheMANUALS.org

- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Move the shift lever to R.

   Does the navigation display image change when the shift lever is in R?

   YES : Intermittent failure, the system is OK at this time.

   NO : The failure is duplicated, go to step 2.

2. DTC check:
   - 1. Move the shift lever to P or N.
   - 2. **CHECK FOR HARD ERROR CODES**.

   Are there any navigation DTCs indicated?

   YES : Go to indicated DTC's troubleshooting.

   NO : Go to step 3.

3. Determine possible failure area (BACK LT line, others):
   - 1. **GO INTO THE SYSTEM DIAGNOSTIC MODE, AND USE THE CAR STATUS DIAGNOSIS TO CHECK THE BACK SIGNAL**.
   - 2. Move the shift lever to R.

   Does the BACK signal change from [0] to [1] when the shift lever position is changed from P or N to R?

   YES : Go to step 5.

   NO : Go to step 4.

4. Open wire check (BACK LT line):
   - 1. Move the shift lever to P or N.
   - 2. Turn the ignition switch to LOCK (0).
   - 3. Disconnect the following connector.

     Audio-navigation unit connector B (20P)

   - 4. Turn the ignition switch to ON (II).
   - 5. Move the shift lever to R.
   - 6. Measure the voltage between test points 1 and 2.

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : There is a short to body ground in the wire(s) between the audio-navigation unit and the rearview camera. Replace the affected shielded harness.

NO : The CAMERA wires are OK. Go to step 8.

8. Audio-navigation unit check:
   - 1. **SUBSTITUTE A KNOWN-GOOD REARVIEW CAMERA** , and recheck.

Does the symptom go away?

YES : Replace the original rearview camera.

NO : REPLACE THE AUDIO-NAVIGATION UNIT .

SYSTEM LOCKS UP OR FREEZES CONSTANTLY

Fig. 136: Navigation System DTC Troubleshooting Flow Chart (System Locks Up Or Freezes Constantly)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **VERIFY THAT THE CORRECT AUDIO-NAVIGATION UNIT IS INSTALLED FOR THIS MODEL. GO INTO THE SYSTEM DIAGNOSTIC MODE, AND USE THE NAVI ECU.**
- **Check any official Honda service website for more service information about the navigation system.**

1. Problem verification:
   - 1. Turn the ignition switch to LOCK (0) and then back to ON (II).

   Does the system reboot, lock up, or freeze?

   YES : The failure is duplicated, go to step 2.

   NO : Intermittent failure, the system is OK at this time.

2. Audio-navigation unit check:
   - 1. Check if the navigation display indicates any error message.

   Is an error message displayed?

   YES : **REFER TO THE ERROR MESSAGES**.

   NO : REPLACE THE AUDIO-NAVIGATION UNIT .

VEHICLE POSITION ICON CONSTANTLY LEAVES ROAD, MOVES ERRATICALLY, OR IS DISPLAYED VERY FAR FROM ACTUAL VEHICLE POSITION

GETtheMANUALS.org

Navigation System Symptom Troubleshooting - Vehicle position icon constantly leaves road, moves erratically, or is displayed very far from actual vehicle position

Fig. 137: Navigation System DTC Troubleshooting Flow Chart (Vehicle Position Icon Constantly Leaves Road Or Moves Erratically)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **Check the GPS signal reception in an open area.**
- **This is not the same condition as when driving off-road (or on a fire or logging road). This condition is caused by a loss of map matching from a bad sensor input. Check for aftermarket metallic window tinting or other objects that can block the GPS signal. ALWAYS DO THE MAP MATCHING BEFORE PROCEEDING WITH THE TROUBLESHOOTING.**
- **Make sure that the latest navigation software is installed.**
- **Check any official Honda service website for more service information about the navigation system.**

1. Problem verification:
    - 1. Park the vehicle in an open area.
    - 2. Turn the ignition switch to ON (II).
    - 3. Check if the vehicle position icon displays the actual vehicle position.

Does the vehicle position icon display the actual vehicle position?

YES : Intermittent failure, the system is OK at this time.

GETtheMANUALS.org

NO : The failure is duplicated, go to step 2.

2. Determine possible failure area (GPS, others):
   - 1. Check the GPS icon on the navigation screen.

   Is the GPS icon white or missing?

   YES : Go to **GPS icon is white or not shown** troubleshooting.

   NO : Go to step 3.

3. DTC check:
   - 1. **CHECK FOR HARD ERROR CODES**.

   Are there any navigation DTCs indicated?

   YES : Go to indicated DTC's troubleshooting.

   NO : Go to step 4.

4. Audio-navigation unit check (substitution):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. SUBSTITUTE A KNOWN-GOOD AUDIO-NAVIGATION UNIT , and check to see if the problem occurs in the same place.

   Does the problem occur in the same location each time?

   YES : Try to replicate the problem in a known-good vehicle. If the problem can be duplicated, the problem is in the map database. Report the problem according to the Navigation Manual under Reporting Errors.

   NO : Replace the original audio-navigation unit.

VEHICLE POSITION ICON WANDERS ACROSS THE MAP WHEN DRIVING (DOES NOT FOLLOW A DISPLAYED ROAD) OR MAP VEHICLE ICON SPINS

GETtheMANUALS.org

Navigation System Symptom Troubleshooting - Vehicle position icon wanders across the map when driving (does not follow a displayed road) or map vehicle ICON spins

Fig. 138: Navigation System DTC Troubleshooting Flow Chart (Map Vehicle Icon Spins)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **This is not the same condition as when driving off-road (or on a fire or logging road).**
- **This condition is caused by a loss of map matching from a bad sensor input. Check for aftermarket or other objects that can block the GPS signal. ALWAYS DO THE MAP MATCHING BEFORE PROCEEDING WITH THE TROUBLESHOOTING.**
- **Aftermarket metallic window tint or electronic devices located near the**

GETtheMANUALS.org

audio-navigation unit or GPS antenna can potentially interfere with the operation of the navigation system.

- **Check any official Honda service website for more service information about the navigation system.**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
   - 1. Test-drive the vehicle in an open area, and check if the vehicle position icon displays the actual vehicle position.

Does the vehicle position icon wanders across the map?

YES : The failure is duplicated, go to step 2.

NO : Intermittent failure, the system is OK at this time.

2. DTC check:
   - 1. **CHECK FOR HARD ERROR CODES**.

Are there any navigation DTCs indicated?

YES : Go to indicated DTC's troubleshooting.

NO : Go to step 3.

3. Determine possible failure area (BACK LT line, others):
   - 1. **GO INTO THE SYSTEM DIAGNOSTIC MODE, AND USE THE CAR STATUS DIAGNOSIS TO CHECK THE BACK SIGNAL**.

Does the BACK signal [1] when the shift lever position is P or N?

YES : Go to step 5.

NO : Go to step 4.

4. Determine possible failure area (audio-navigation unit, BACK LT line):
   - 1. **GO INTO THE SYSTEM DIAGNOSTIC MODE, AND USE THE CAR STATUS DIAGNOSIS TO CHECK THE BACK SIGNAL**.
   - 2. Move the shift lever to R.

Does the BACK signal change from [0] to [1] when the shift lever position is changed from P or N to R?

YES : REPLACE THE AUDIO-NAVIGATION UNIT .

NO : Go to step 6.

GETtheMANUALS.org

5. Shorted wire check (BACK LT line to power):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Disconnect the following connector.

      Audio-navigation unit connector B (20P)

    - 3. Turn the ignition switch to ON (II).
    - 4. Measure the voltage between test points 1 and 2.

      Test condition IG ON (II)

      Audio-navigation unit connector B (20P): disconnected

      Test circuit BACK LT

      Test point 1 Audio-navigation unit connector B (20P) No. 9 (BRN)

      Test point 2 Body ground

Fig. 139: Measuring Voltage Between Audio-Navigation Unit Connector B (20P) No. 9 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : Repair a short to power in the wire between the under-dash fuse/relay box and the audio-navigation unit.

NO : REPLACE THE AUDIO-NAVIGATION UNIT .

6. Open wire check (BACK LT line):
    - 1. Move the shift lever to P or N.
    - 2. Turn the ignition switch to LOCK (0).
    - 3. Disconnect the following connector.

      Audio-navigation unit connector B (20P)

GETtheMANUALS.org

- 4. Turn the ignition switch to ON (II).
- 5. Move the shift lever to R.
- 6. Measure the voltage between test points 1 and 2.

Test condition IG ON (II)

Audio-navigation unit connector B (20P): disconnected

Test circuit BACK LT

Test point 1 Audio-navigation unit connector B (20P) No. 9 (BRN)

Test point 2 Body ground

Fig. 140: Measuring Voltage Between Audio-Navigation Unit Connector B (20P) No. 9 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : REPLACE THE AUDIO-NAVIGATION UNIT .

NO : Repair an open in the wire between the audio-navigation unit and the under-dash fuse/relay box.

VOICE CONTROL DOES NOT WORK/RESPOND

GETtheMANUALS.org

Navigation System Symptom Troubleshooting - Voice control does not work/respond

Fig. 141: Navigation System DTC Troubleshooting Flow Chart (Voice Control Does Not Work/Respond)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **Make sure that the latest navigation software is installed.**
- **Before assuming that a voice complaint is hardware related, ensure that the voice control system is being operated correctly.**
  - **Make sure you are on the correct screen when trying to issue a voice command. For instance, the command "Find the nearest Italian Restaurant" only works on Map screen (see the Navigation Manual for a complete list of allowed voice commands for the information being displayed)**
  - **Close the windows and moonroof**
  - **Set the fan speed to low (1 or 2)**
  - **Adjust the air flow from the air conditioning vents so that they do not blow against the microphone on the ceiling**
  - **Pause after pressing the TALK button then give a voice command clearly in a natural speaking voice. If the system cannot recognize your command, speak louder**
  - **If you speak a command with something in your mouth, or your voice is too husky, or high pitched, the system may misunderstand your command**
- **Determine if the problem only happens to one person, or everyone who uses the system.**

GETtheMANUALS.org

- **If the system only has a problem with one person's voice, this should be considered a system limitation.**
- **Check any official Honda service website for more service information about the navigation system.**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Pressing the TALK button, then give a voice command "Audio" clearly in a natural speaking voice.

   Does the audio system turn on by the voice command?

   YES : Intermittent failure, the system is OK at this time.

   NO : The failure is duplicated, go to step 2.

2. DTC check:
   - 1. **CHECK FOR HARD ERROR CODES**.

   Are there any navigation DTCs indicated?

   YES : Go to indicated DTC's troubleshooting.

   NO : Go to step 3.

3. Voice control switch check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. **DO THE VOICE CONTROL SWITCH TEST**.

   Is the switch OK?

   YES : REPLACE THE AUDIO-NAVIGATION UNIT .

   NO : **REPLACE THE HFL-NAVIGATION VOICE CONTROL SWITCH**.

VOICE GUIDANCE CANNOT BE HEARD, IS BROKEN UP, OR THERE IS STATIC

GETtheMANUALS.org

Navigation System Symptom Troubleshooting - Voice guidance cannot be heard, is broken up, or there is static

Fig. 142: Navigation System DTC Troubleshooting Flow Chart (Voice Guidance Cannot Be Heard, Broken Up Or Static)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **Check any official Honda service website for more service information about the navigation system.**
- **Check the connectors for poor connections or loose terminals.**

1. Determine possible failure area (volume settings, others):
   - 1. Turn the ignition switch to ON (II).
   - 2. Check the volume and voice feedback setting for the navigation system in set-up.

Is either set to OFF?

YES : Set the voice feedback to ON, and select an audible level for the volume.

GETtheMANUALS.org

NO : Go to step 2.

2. Determine possible failure area (audio system, navigation system):
    - 1. Check that the audio system is operating normally, from different audio sources (AM/FM and CD) and the speaker sound levels are normal.

Does the audio system work normally, and is the audio output from the speaker normal when playing various audio sources?

YES : Go to step 3.

NO : Refer to the audio system Symptom Troubleshooting.

3. Shorted wire check (AMP MUTE line):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Disconnect the following connectors.

      Audio-navigation unit connector E (16P)

      Stereo amplifier connector B (24P)

    - 3. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      Audio-navigation unit connector E (16P): disconnected

      Stereo amplifier connector B (24P): disconnected

      Test circuit AMP MUTE

      Test point 1 Stereo amplifier connector B (24P) No. 24 (RED)

      Test point 2 Body ground

GETtheMANUALS.org

Fig. 143: Checking Continuity Between Stereo Amplifier Connector B (24P) No. 24 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to body ground in the wire between the stereo amplifier and the audio-navigation unit.

NO : The AMP MUTE wire is not shorted to ground. Go to step 4.

4. Open wire check (AMP MUTE line):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Audio-navigation unit connector E (16P): disconnected

     Stereo amplifier connector B (24P): disconnected

     Test circuit AMP MUTE

     Test point 1 Audio-navigation unit connector E (16P) No. 12 (RED)

     Test point 2 Stereo amplifier connector B (24P) No. 24 (RED)

Fig. 144: Checking Continuity Between Audio-Navigation Unit Connector E (16P) No. 12 And Stereo Amplifier Connector B (24P) No. 24
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

GETtheMANUALS.org

YES : The AMP MUTE wire is OK. Go to step 5.

NO : Repair an open in the wire between the audio-navigation unit and the stereo amplifier.

5. Audio-navigation unit check:
   - 1. SUBSTITUTE A KNOWN-GOOD STEREO AMPLIFIER , and recheck.

Does the symptom go away?

YES : Replace the original stereo amplifier.

NO : REPLACE THE AUDIO-NAVIGATION UNIT .

VOICE CONTROL SWITCH REMOVAL, INSTALLATION, AND TEST

Removal

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

1. Battery Terminal (SRS) - Disconnection
   1. Make sure the ignition switch is in LOCK (0).
   2. Disconnect and isolate the negative cable (A) from the battery.

      NOTE: Always disconnect the negative side first.

   3. Disconnect the positive cable (B) from the battery.
   4. Wait at least 3 minutes before starting work.

Fig. 145: Identifying Battery Positive And Negative Terminals

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Driver's Airbag
    1. Remove the access panel (A).
    2. Disconnect the driver's airbag inflator connector (B) on the cable reel harness.
    3. Disconnect the horn switch connector (C).

Fig. 146: Identifying Access Panel, Driver's Airbag Inflator Connector And Horn Switch Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    4. Remove the TORX bolts using a TORX T30 bit.
    5. Remove the driver's airbag (A).

GETtheMANUALS.org

Fig. 147: Identifying Driver's Airbag
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Steering Wheel Assembly
    1. Set the front wheels in the straight ahead position.
    2. Disconnect the connector (A).
    3. Loosen the steering wheel bolt (B) three turns.

Fig. 148: Identifying Steering Wheel Connector And Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    4. Install a commercially available steering wheel puller (A) on the steering wheel (B).
    5. Free the steering wheel from the steering column shaft by turning the pressure bolt (C) of the puller.

GETtheMANUALS.org

Note these items when removing the steering wheel:

- Do not tap on the steering wheel or the steering column shaft when removing the steering wheel.
- If you thread the puller bolts (D) into the wheel hub more than five threads, the bolts will hit the cable reel and damage it. To prevent this, install a pair of jam nuts five threads up on each puller bolt.

Fig. 149: Turning Steering Wheel Pressure Bolt Using Puller
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the steering wheel puller.
7. Remove the steering wheel (A) from the steering column.

Fig. 150: Identifying Steering Wheel

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. HFL-Voice Control Switch
    1. Remove the cover (A).
    2. Remove the HFL-voice control switch (B).

Fig. 151: Identifying HFL-Voice Control Switch And Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Test

1. Voice Control Switch - Test
    1. Measure the resistance between terminals No. 3 and No. 5 in each switch position according to the table.

HFL-VOICE CONTROL SWITCH

Position	Resistance
No button pressed	About 10 kohms
HANG-UP button pressed	About 47 kohms
PICK-UP button pressed	About 222 ohms
TALK button pressed	About 2.25 kohms

    2. If the resistance is not as specified, replace the HFL-voice control switch (A).

GETtheMANUALS.org

Fig. 152: Identifying HFL-Voice Control Switch Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Installation

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

1. HFL-Voice Control Switch
    1. Install the HFL-voice control switch (A).
    2. Install the cover (B).

Fig. 153: Identifying HFL-Voice Control Switch And Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

2. Steering Wheel Assembly
    1. Make sure the front wheels are pointing straight ahead.
    2. Center the cable reel (A). Do this by first rotating the cable reel clockwise until it stops.
    3. Rotate the cable reel counterclockwise about three full turns. The arrow mark (B) on the cable reel label should point straight up.

Fig. 154: Identifying Cable Reel Label With Arrow Mark
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    4. Position the steering wheel hub (A) so that it engages the pin (B) of the cable reel.
    5. Install the steering wheel (C) on to the steering column shaft.

NOTE: **Do not tap on the steering wheel or the steering column shaft when installing the steering wheel.**

GETtheMANUALS.org

Fig. 155: Identifying Steering Wheel, Hub And Pin
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the steering wheel bolt (A), and tighten it to the specified torque.
7. Connect the connector (B).
8. Make sure the wire harness is routed and fastened properly.

Fig. 156: Identifying Steering Wheel Connector And Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Driver's Airbag

NOTE: If you are replacing a deployed driver's airbag, inspect the cable reel for heat damage. If there is any damage, replace the cable reel.

1. Place the driver's airbag (A) in the steering wheel.
2. Tighten the new TORX bolts using a TORX T30 bit.

NOTE: Make sure the clearance (B) between the steering wheel and the horn pad is the specified value.

GETtheMANUALS.org

Fig. 157: Identifying Steering Wheel Driver's Airbag With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 158: Identifying Torx Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Connect the driver's airbag inflator connector (A) on the cable reel harness.
4. Connect the horn switch connector (B).

NOTE: **After reconnecting the negative cable to the battery, make sure the horn works properly.**

GETtheMANUALS.org

5. Install the access panel (C).

Fig. 159: Identifying Driver's Airbag Inflator Connector, Horn Switch Connector And Access Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Battery Terminal (SRS) - Reconnection

NOTE: If the battery performance is abnormal, test the battery.

1. Clean the battery terminals.
2. Connect the positive cable (A) to the battery.

NOTE: Always connect the positive side first.

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

GETtheMANUALS.org

Fig. 160: Identifying Battery Positive And Negative Terminals With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Steering Wheel Spoke Angle - Check
    1. Check the steering wheel spoke angle.
    2. If steering spoke angles to the right and left are not equal (steering wheel is not centered), correct the engagement of the wheel/column shaft splines.
6. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

GETtheMANUALS.org

Fig. 161: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. VSA Sensor Neutral Position - Memorization
    1. Park the vehicle on a flat and level surface, with the steering wheel in the straight ahead position.
    2. Select VSA ADJUSTMENT, then select ALL SENSORS with the HDS, and follow the screen prompts.

    NOTE: See the HDS Help menu for specific instructions.

8. Steering Angle Sensor Neutral Position - Clear
    1. Select EPS ADJUSTMENT, then select EPS STEERING ANGLE SENSOR VALUE CLEAR and follow the screen prompts on the HDS.

    NOTE: See the HDS Help menu for specific instructions.

GETtheMANUALS.org

DTC P0010: VTC OIL CONTROL SOLENOID VALVE MALFUNCTION

DTC Troubleshooting: P0010

GETtheMANUALS.org

Fig. 1: DTC Troubleshooting Flow Chart (P0010)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0010 VTC OIL CONTROL SOLENOID VALVE MALFUNCTION			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 3. Start the engine. Hold the engine speed at 3, 000 rpm without load (in P or N) until the radiator fan comes on, then let it idle.
   - 4. Do the VTC TEST in the INSPECTION MENU with the HDS.
   - 5. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0010 VTC OIL CONTROL SOLENOID VALVE MALFUNCTION			

Is DTC P0010 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the VTC oil control solenoid valve and the PCM.

2. VTC oil control valve internal resistance check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     VTC oil control solenoid valve 2P connector

   - 3. At the solenoid valve side, measure the resistance between test points 1 and 2.

     Test condition IG LOCK (0)

GETtheMANUALS.org

VTC oil control solenoid valve 2P connector: disconnected

Test circuit VTC P, PG1

Test point 1 VTC oil control solenoid valve 2P connector No. 1 (VTC oil control solenoid valve side)

Test point 2 VTC oil control solenoid valve 2P connector No. 2 (VTC oil control solenoid valve side)

Fig. 2: Measuring Resistance Between VTC Oil Control Solenoid Valve 2P Connector No. 1 And No. 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there 6.75-8.25 ohms at room temperature?

YES : Go to step 3.

NO : REPLACE THE VTC OIL CONTROL SOLENOID VALVE , then **do the repair verification** .

3. Open wire check (PG1 line):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     VTC oil control solenoid valve 2P connector: disconnected

     Test circuit PG1

     Test point 1 VTC oil control solenoid valve 2P connector No. 2 (BLK)

     Test point 2 Body ground

GETtheMANUALS.org

Fig. 3: Checking Continuity Between VTC Oil Control Solenoid Valve 2P Connector No. 2 (BLK) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The PG1 wire is OK. Go to step 4.

NO : Repair an open in the PG1 wire between the VTC oil control solenoid valve and body ground (G101), then **do the repair verification** .

4. Shorted wire check (VTC P line):
   - 1. Jump the SCS line with the HDS.
   - 2. Disconnect the following connector.

     PCM connector C (49P)

   - 3. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     VTC oil control solenoid valve 2P connector: disconnected

     PCM connector C (49P): disconnected

     Test circuit VTC P

     Test point 1 PCM connector C (49P) No. 33 (BLU)

     Test point 2 Body ground

GETtheMANUALS.org

Fig. 4: Checking Continuity Between PCM Connector C (49P) No. 33 (BLU) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short in the VTC P wire between the VTC oil control solenoid valve and the PCM (C33), then **do the repair verification** .

NO : The VTC P wire is not shorted. Go to step 5.

5. Open wire check (VTC P line):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     VTC oil control solenoid valve 2P connector: disconnected

     PCM connector C (49P): disconnected

     Test circuit VTC P

     Test point 1 VTC oil control solenoid valve 2P connector No. 1 (BLU)

     Test point 2 PCM connector C (49P) No. 33 (BLU)

GETtheMANUALS.org

Fig. 5: Checking Continuity Between VTC Oil Control Solenoid Valve 2P Connector No. 1 (BLU) And PCM Connector C (49P) No. 33 (BLU)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The VTC P wire is OK. **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

NO : Repair an open in the VTC P wire between the VTC oil control solenoid valve and the PCM (C33), then **do the repair verification** .

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Turn the ignition switch to LOCK (0).
- 2. Reconnect all connectors.
- 3. Turn the ignition switch to ON (II).
- 4. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 5. **DO THE PCM IDLE LEARN PROCEDURE** .
- 6. Do the VTC TEST in the INSPECTION MENU with the HDS.
- 7. Monitor the OBD STATUS for DTC P0010 in the DTCs MENU with the HDS.

DTC Description	OBD STATUS
P0010 VTC OIL CONTROL SOLENOID VALVE MALFUNCTION	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

GETtheMANUALS.org

PASSED : Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED : Go to step 1 and recheck. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then check the OBD STATUS again.

NOT COMPLETED : Check the OBD STATUS again.

DTC P0011: VTC SYSTEM MALFUNCTION

GETtheMANUALS.org

DTC Troubleshooting: P0011

Fig. 6: DTC Troubleshooting Flow Chart (P0011)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and**

GETtheMANUALS.org

review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0011 VTC SYSTEM MALFUNCTION			

1. Oil pressure check:
   - 1. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 3. Start the engine.
   - 4. Watch the low oil pressure indicator with the engine running.

   Is the low oil pressure indicator on?

   YES : CHECK THE OIL PRESSURE , then **do the repair verification** .

   NO : Go to step 2.

2. Problem verification:
   - 1. Do the VTC TEST in the INSPECTION MENU with the HDS.

   Is the result OK?

   YES : Go to step 3.

   NO : The failure is duplicated. Go to step 5.

3. VTC system check (VTC STATUS check with the HDS):
   - 1. Test-drive at a steady speed between 19-38 mph (30-60 km/h) for 10 minutes.
   - 2. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
VTC STATUS	ON			

   Do the current condition(s) match the threshold?

   YES : Go to step 4.

   NO : Go to step 1 and recheck.

4. VTC system check (OBD STATUS check):

GETtheMANUALS.org

- 1. Monitor the OBD STATUS for DTC P0011 in the DTCs MENU with the HDS.

DTC Description	OBD STATUS
P0011 VTC SYSTEM MALFUNCTION	

Does the HDS indicate FAILED?

YES : Go to step 5.

NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time.

If the screen indicates NOT COMPLETED, go to step 1 and recheck.

5. VTC strainer visual check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. **REMOVE THE AUTO-TENSIONER** .
   - 3. Remove the VTC strainer (A), and check it for clogging.

Fig. 7: Identifying VTC Strainer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is the strainer OK?

YES : Go to step 6.

NO : Clean the VTC strainer, REPLACE THE ENGINE OIL FILTER and THE ENGINE OIL , then **do the repair verification** .

6. VTC oil control valve operation check:

GETtheMANUALS.org

- 1. TEST THE VTC OIL CONTROL SOLENOID VALVE .

Is the VTC oil control solenoid valve OK?

YES : Go to step 7.

NO : REPLACE THE VTC OIL CONTROL SOLENOID VALVE , then **do the repair verification** .

7. Camshaft timing check:
   - 1. **Check the camshaft timing** See VALVE CLEARANCE ADJUSTMENT or VALVE, SPRING, AND VALVE SEAL REMOVAL AND INSTALLATION .

Is the camshaft timing OK?

YES : Go to step 8.

NO : **Reset the camshaft timing** See VALVE CLEARANCE ADJUSTMENT or VALVE, SPRING, AND VALVE SEAL REMOVAL AND INSTALLATION , then **do the repair verification** .

8. Cam chain check:
   - 1. CHECK FOR DAMAGE OR STRETCH AT THE CAM CHAIN .

Is the cam chain damaged or stretched?

YES : REPLACE THE CAM CHAIN AND THE AUTO-TENSIONER , then **do the repair verification** .

NO : Go to step 9.

9. VTC actuator check:
   - 1. INSPECT THE VTC ACTUATOR .

Is the VTC actuator OK?

YES : Check the VTC system oil passages between VTC strainer and the VTC actuator in the cylinder block and the cylinder head, and clean them if needed, then **do the repair verification** .

NO : REPLACE THE VTC ACTUATOR , then **do the repair verification** .

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Turn the ignition switch to ON (II).
- 2. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 3. **DO THE PCM IDLE LEARN PROCEDURE** .

GETtheMANUALS.org

- 4. **Do the CKP pattern clear/CKP pattern learn procedure** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 5. Do the VTC TEST in the INSPECTION MENU with the HDS.
- 6. Monitor the OBD STATUS for DTC P0011 in the DTCs MENU with the HDS.

DTC Description	OBD STATUS
P0011 VTC SYSTEM MALFUNCTION	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED : Troubleshooting is complete. If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED : Go to step 1 and recheck.

NOT COMPLETED : Check the OBD STATUS again.

DTC P0101: MAF SENSOR CIRCUIT RANGE/PERFORMANCE PROBLEM

GETtheMANUALS.org

DTC Troubleshooting: P0101

GETtheMANUALS.org

Fig. 8: DTC Troubleshooting Flow Chart (P0101)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**
- **If DTC P0106, P2228, and/or P2229 are stored at the same time as DTC P0101, troubleshoot those DTCs first, then recheck for DTC P0101.**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0101 MAF SENSOR CIRCUIT RANGE/PERFORMANCE PROBLEM			

1. Parts condition check:
   - 1. Check for poor connections or damage to these parts:
     - PCV hose
     - Intake air duct
     - Air cleaner
     - Purge (PCS) line

   Are the parts OK?

   YES : Go to step 2.

   NO : Repair or replace the damaged part(s), then **do the repair verification** .

2. Intake air duct visual check:
   - 1. Check for damage or looseness of the air duct in the air cleaner.

   Is it OK?

   YES : Go to step 3.

   NO : Reconnect or replace the intake air duct in the air cleaner, then **do the repair verification** .

3. Air cleaner element visual check:
   - 1. Check for a dirty air cleaner element.

   Is it dirty?

   YES : **REPLACE THE AIR CLEANER ELEMENT** , then **do the repair verification** .

GETtheMANUALS.org

NO : Go to step 4.

4. MAF sensor signal check (without engine running):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Turn the ignition switch to ON (II).
   - 3. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
MAF SENSOR	About 0.2	g/s		

Do the current condition(s) match the threshold?

YES : Go to step 5.

NO : **REPLACE THE MAF SENSOR/IAT SENSOR** , then **do the repair verification** .

5. MAF sensor signal check (with engine running):
   - 1. Start the engine.
   - 2. Vary the engine speed between 2, 000 rpm and 3, 000 rpm.
   - 3. Check the MAF SENSOR in the DATA LIST with the HDS.

Signal	Current conditions	
	Values	Unit
MAF SENSOR		

Does the reading change?

YES : Go to step 6.

NO : **REPLACE THE MAF SENSOR/IAT SENSOR** , then **do the repair verification** .

6. MAF sensor check:
   - 1. Hold the engine speed at 3, 000 rpm without load (in P or N) until the radiator fan comes on, then let it idle.
   - 2. Test-drive the vehicle for several minutes in the range of these recorded freeze data parameters:
     - ENGINE SPEED
     - VEHICLE SPEED
     - MAP SENSOR
     - TP SENSOR

Signal	Current conditions	

GETtheMANUALS.org

	Values	Unit
ENGINE SPEED		
VEHICLE SPEED		
MAP SENSOR		
TP SENSOR		

- 3. Monitor the OBD STATUS for DTC P0101 with the HDS.

DTC Description	OBD STATUS
P0101 MAF SENSOR CIRCUIT RANGE/PERFORMANCE PROBLEM	

Does the HDS indicate FAILED?

YES : **REPLACE THE MAF SENSOR/IAT SENSOR** , then **do the repair verification** .

NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the MAF sensor/IAT sensor and the PCM. If the HDS indicates NOT COMPLETED, go to step 2 and recheck.

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Turn the ignition switch to ON (II).
- 2. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 3. **DO THE PCM IDLE LEARN PROCEDURE** .
- 4. Test-drive the vehicle for several minutes in the range of these recorded freeze data parameters:
  - ENGINE SPEED
  - VEHICLE SPEED
  - MAP SENSOR
  - TP SENSOR

Signal	Current conditions	
	Values	Unit
ENGINE SPEED		
VEHICLE SPEED		
MAP SENSOR		
TP SENSOR		

- 5. Monitor the OBD STATUS for DTC P0101 in the DTCs MENU with the HDS.

DTC Description	OBD STATUS
P0101 MAF SENSOR CIRCUIT RANGE/PERFORMANCE PROBLEM	

GETtheMANUALS.org

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED : Troubleshooting is complete. If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED : Go to step 1 and recheck.

NOT COMPLETED : Meet the test condition, and check the OBD STATUS again.

DTC P0102: MAF SENSOR CIRCUIT LOW VOLTAGE

GETtheMANUALS.org

DTC Troubleshooting: P0102

Fig. 9: DTC Troubleshooting Flow Chart (P0102)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and**

GETtheMANUALS.org

review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0102 MAF SENSOR LOW CIRCUIT VOLTAGE			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II), and wait 2 seconds.
   - 2. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
MAF SENSOR	Less than 0.1	V		

Do the current condition(s) match the threshold?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the MAF sensor/IAT sensor and the PCM.

2. Shorted wire check (IG1 ACG/IG1(MAIN)/IG1(AFM) line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check the following fuse.

     Fuse No. B2 (10 A)

     Location Under-dash fuse/relay box

Is the fuse OK?

YES : The IG1 ACG/IG1(MAIN)/IG1(AFM) wire is not shorted. Go to step 3.

NO : Repair a short in the IG1 ACG/IG1(MAIN)/IG1(AFM) wire between the MAF sensor/IAT sensor and the No. B2 (10 A) fuse. Also replace the No. B2 (10 A) fuse, then **do the repair verification** .

3. Open wire check (IG1 ACG/IG1(MAIN)/IG1(AFM) line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     MAF sensor/IAT sensor 5P connector

   - 3. Turn the ignition switch to ON (II).

GETtheMANUALS.org

- 4. Measure the voltage between test points 1 and 2.

  Test condition IG ON (II)

  MAF sensor/IAT sensor 5P connector: disconnected

  Test circuit IG1(AFM)

  Test point 1 MAF sensor/IAT sensor 5P connector No. 3 (WHT)

  Test point 2 Body ground

Fig. 10: Measuring Voltage Between MAF Sensor/IAT Sensor 5P Connector No. 3 (WHT) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The IG1 ACG/IG1(MAIN)/IG1(AFM) wire is OK. Go to step 4.

NO : Repair an open in the IG1 ACG/IG1(MAIN)/IG1(AFM) wire between the No. B2 (10 A) fuse and the MAF sensor/IAT sensor, then **do the repair verification** .

4. Determine possible failure area (VGP line, others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Measure the resistance between test points 1 and 2.

     Test condition IG LOCK (0)

     MAF sensor/IAT sensor 5P connector: disconnected

     Test circuit VGP

     Test point 1 MAF sensor/IAT sensor 5P connector No. 5 (LT BLU)

     Test point 2 Body ground

GETtheMANUALS.org

Fig. 11: Measuring Resistance Between MAF Sensor/IAT Sensor 5P Connector No. 5 (LT BLU) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there 190-210 kohms?

YES : Go to step 7.

NO : Go to step 5.

5. Shorted wire check (VGP line):
   - 1. Jump the SCS line with the HDS.
   - 2. Disconnect the following connector.

     PCM connector B (49P)

   - 3. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     MAF sensor/IAT sensor 5P connector: disconnected

     PCM connector B (49P): disconnected

     Test circuit VGP

     Test point 1 PCM connector B (49P) No. 22 (LT BLU)

     Test point 2 Body ground

GETtheMANUALS.org

Fig. 12: Checking Continuity Between PCM Connector B (49P) No. 22 (LT BLU) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short in the VGP wire between the PCM (B22) and the MAF sensor/IAT sensor, then **do the repair verification** .

NO : The VGP wire is not shorted. Go to step 6.

6. Open wire check (VGP line):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     MAF sensor/IAT sensor 5P connector: disconnected

     PCM connector B (49P): disconnected

     Test circuit VGP

     Test point 1 PCM connector B (49P) No. 22 (LT BLU)

     Test point 2 MAF sensor/IAT sensor 5P connector No. 5 (LT BLU)

GETtheMANUALS.org

Fig. 13: Checking Continuity Between PCM Connector B (49P) No. 22 (LT BLU) And MAF Sensor/IAT Sensor 5P Connector No. 5 (LT BLU)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The VGP wire is OK. **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

NO : Repair an open in the VGP wire between the PCM (B22) and the MAF sensor/IAT sensor, then **do the repair verification** .

7. MAF sensor/IAT sensor check (substitution):
   - 1. **SUBSTITUTE A KNOWN-GOOD MAF SENSOR/IAT SENSOR** .
   - 2. Reconnect all connectors.
   - 3. Turn the ignition switch to ON (II).
   - 4. Clear the DTC with the HDS.
   - 5. Start the engine. Hold the engine speed at 2, 000 rpm without load (in P or N).
   - 6. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0102 MAF SENSOR LOW VOLTAGE			

Is DTC P0102 indicated?

YES : The MAF sensor/IAT sensor is OK. **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair**

GETtheMANUALS.org

verification .

NO : **REPLACE THE ORIGINAL MAF SENSOR/IAT SENSOR** , then **do the repair verification** .

REPAIR VERIFICATION

- 1. Turn the ignition switch to LOCK (0).
- 2. Reconnect all connectors.
- 3. Turn the ignition switch to ON (II).
- 4. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 5. **DO THE PCM IDLE LEARN PROCEDURE** .
- 6. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0102 MAF SENSOR LOW VOLTAGE			

Is DTC P0102 indicated?

YES : Check for poor connections or loose terminals at the MAF sensor/IAT sensor and the PCM. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then recheck. If the PCM was substituted, go to step 1.

NO : Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

DTC P0103: MAF SENSOR CIRCUIT HIGH VOLTAGE

GETtheMANUALS.org

DTC Troubleshooting: P0103

Fig. 14: DTC Troubleshooting Flow Chart (P0103)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0103 MAF SENSOR CIRCUIT HIGH VOLTAGE			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II), and wait 2 seconds.
   - 2. Check the parameter(s) below with the HDS.

	Threshold	Current conditions

GETtheMANUALS.org

Signal	Values	Unit	Values	Unit
MAF SENSOR	More than 4.89	V		

Do the current condition(s) match the threshold?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the MAF sensor/IAT sensor and the PCM.

2. Open wire check (VGM line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connectors.

     MAF sensor/IAT sensor 5P connector

     PCM connector B (49P)

   - 4. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     MAF sensor/IAT sensor 5P connector: disconnected

     PCM connector B (49P): disconnected

     Test circuit VGM

     Test point 1 PCM connector B (49P) No. 43 (LT GRN)

     Test point 2 MAF sensor/IAT sensor 5P connector No. 4 (LT GRN)

GETtheMANUALS.org

Fig. 15: Checking Continuity Between PCM Connector B (49P) No. 43 (LT GRN) And MAF Sensor/IAT Sensor 5P Connector No. 4 (LT GRN)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The VGM wire is OK. Go to step 3.

NO : Repair an open in the VGM wire between the PCM (B43) and the MAF sensor/IAT sensor, then **do the repair verification** .

3. PCM internal circuit check:
   - 1. Reconnect the following connector.

     PCM connector B (49P)

   - 2. Connect terminals A and B with a jumper wire.

     Terminal A MAF sensor/IAT sensor 5P connector No. 4 (LT GRN)

     Terminal B MAF sensor/IAT sensor 5P connector No. 5 (LT BLU)

GETtheMANUALS.org

Fig. 16: Identifying MAF Sensor/IAT Sensor 5P Connector Terminals

- 3. Turn the ignition switch to ON (II).
- 4. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 5. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0103 MAF SENSOR CIRCUIT HIGH VOLTAGE			

Is DTC P0103 indicated?

YES : **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

NO : The PCM internal circuit is OK. **REPLACE THE MAF SENSOR/IAT SENSOR** , then **do the repair verification** .

REPAIR VERIFICATION

- 1. Turn the ignition switch to LOCK (0).
- 2. Reconnect all connectors.
- 3. Turn the ignition switch to ON (II).
- 4. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 5. **DO THE PCM IDLE LEARN PROCEDURE** .
- 6. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0103 MAF SENSOR CIRCUIT HIGH VOLTAGE			

Is DTC P0103 indicated?

GETtheMANUALS.org

YES : Check for poor connections or loose terminals at the MAF sensor/IAT sensor and the PCM. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then recheck. If the PCM was substituted, go to step 1.

NO : Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

DTC P0107: MAP SENSOR CIRCUIT LOW VOLTAGE

GETtheMANUALS.org

DTC Troubleshooting: P0107

Fig. 17: DTC Troubleshooting Flow Chart (P0107)

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0107 MAP SENSOR CIRCUIT LOW VOLTAGE			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
MAP SENSOR	Less than 0.23	V		

Do the current condition(s) match the threshold?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the MAP sensor and the PCM.

2. Determine possible failure area (MAP(PB) line, others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     MAP sensor 3P connector

   - 3. Turn the ignition switch to ON (II).
   - 4. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
MAP SENSOR	Less than 0.23	V		

Do the current condition(s) match the threshold?

YES : Go to step 5.

NO : Go to step 3.

GETtheMANUALS.org

3. Determine possible failure area (MAP sensor, others):
    - 1. Measure the voltage between test points 1 and 2.

      Test condition IG ON (II)

      MAP sensor 3P connector: disconnected

      Test circuit VCC1, SG1

      Test point 1 MAP sensor 3P connector No. 1 (GRY)

      Test point 2 MAP sensor 3P connector No. 3 (PNK)

      Fig. 18: Measuring Voltage Between MAP Sensor 3P Connector No. 1 (GRY) And No. 3 (PNK)
      Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5.0 V?

YES : **REPLACE THE MAP SENSOR** , then **do the repair verification** .

NO : Go to step 4.

4. Open wire check (VCC1 line):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Jump the SCS line with the HDS.
    - 3. Disconnect the following connector.

      PCM connector C (49P)

    - 4. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      MAP sensor 3P connector: disconnected

      PCM connector C (49P): disconnected

GETtheMANUALS.org

Test circuit VCC1

Test point 1 PCM connector C (49P) No. 23 (PNK)

Test point 2 MAP sensor 3P connector No. 3 (PNK)

Fig. 19: Checking Continuity Between PCM Connector C (49P) No. 23 (PNK) And MAP Sensor 3P Connector No. 3 (PNK)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The VCC1 wire is OK. **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

NO : Repair an open in the VCC1 wire between the PCM (C23) and the MAP sensor, then **do the repair verification** .

5. Shorted wire check (MAP(PB) line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connector.

     PCM connector B (49P)

   - 4. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

GETtheMANUALS.org

MAP sensor 3P connector: disconnected

PCM connector B (49P): disconnected

Test circuit MAP(PB)

Test point 1 MAP sensor 3P connector No. 2 (GRN)

Test point 2 Body ground

Fig. 20: Checking Continuity Between MAP Sensor 3P Connector No. 2 (GRN) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short in the MAP(PB) wire between the PCM (B31) and the MAP sensor, then **do the repair verification** .

NO : The MAP(PB) wire is OK. **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

REPAIR VERIFICATION

- 1. Turn the ignition switch to LOCK (0).
- 2. Reconnect all connectors.
- 3. Turn the ignition switch to ON (II).
- 4. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 5. **DO THE PCM IDLE LEARN PROCEDURE** .
- 6. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0107 MAP SENSOR CIRCUIT LOW VOLTAGE			

Is DTC P0107 indicated?

GETtheMANUALS.org

YES : Check for poor connections or loose terminals at the MAP sensor and the PCM. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then recheck. If the PCM was substituted, go to step 1.

NO : Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The MAP(PB) wire is OK. **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

NO : Repair an open in the MAP(PB) wire between the PCM (B31) and the MAP sensor, then **do the repair verification** .

REPAIR VERIFICATION

- 1. Turn the ignition switch to LOCK (0).
- 2. Reconnect all connectors.
- 3. Turn the ignition switch to ON (II).
- 4. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 5. **DO THE PCM IDLE LEARN PROCEDURE** .
- 6. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0108 MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR CIRCUIT HIGH VOLTAGE			

Is DTC P0108 indicated?

YES : Check for poor connections or loose terminals at the MAP sensor and the PCM. If the PCM was updated, **substitute a known-good PCM** See **PCM UPDATE** or **PCM REMOVAL AND INSTALLATION** , then recheck. If the PCM was substituted, go to step 1.

NO : Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

DTC P0111: IAT SENSOR CIRCUIT RANGE/PERFORMANCE PROBLEM

GETtheMANUALS.org

DTC Troubleshooting: P0111

Fig. 26: DTC Troubleshooting Flow Chart (P0111)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0111 IAT SENSOR CIRCUIT RANGE/PERFORMANCE PROBLEM			

1. Connector visual check:
   - 1. Check for poor connections or loose terminals at these locations:
     - MAF sensor/IAT sensor

GETtheMANUALS.org

- ECT sensor 1
- ECT sensor 2

Are the connections and terminals OK?

YES : Go to step 2.

NO : Repair the connections or terminals, then **do the repair verification** .

2. IAT sensor performance check (low temperature):
   - 1. **REMOVE THE MAF SENSOR/IAT SENSOR** .
   - 2. Allow the MAF sensor/IAT sensor to cool to the ambient temperature.
   - 3. Note the ambient temperature.
   - 4. Connect the MAF sensor/IAT sensor to its 5P connector, but do not install it.
   - 5. Turn the ignition switch to ON (II).
   - 6. Quickly note the value of the IAT SENSOR in the DATA LIST with the HDS.

Signal	Current conditions	
	Values	Unit
IAT SENSOR (2)		

   - 7. Compare the value of IAT SENSOR to the ambient temperature.

Does the value of IAT SENSOR differ 5.4 °F (3 °C) or more from the ambient temperature?

YES : **REPLACE THE MAF SENSOR/IAT SENSOR** , then **do the repair verification** .

NO : The IAT sensor is OK in the ambient temperature. Go to step 3.

3. IAT sensor performance check (high temperature):
   - 1. Disconnect the following connector.

     MAF sensor/IAT sensor 5P connector

   - 2. Using a heat gun, blow hot air on the MAF sensor/IAT sensor for a few seconds. Do not apply the heat longer than a few seconds or you will damage the sensor.
   - 3. Connect the MAF sensor/IAT sensor to its 5P connector, but do not install it.
   - 4. Check the IAT SENSOR in the DATA LIST with the HDS.

Signal	Current conditions	
	Values	Unit
IAT SENSOR (2)		

GETtheMANUALS.org

Does the IAT SENSOR change 76 °F (42 °C) or more?

YES : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the MAF sensor/IAT sensor and the PCM.

NO : **REPLACE THE MAF SENSOR/IAT SENSOR** , then **do the repair verification** .

REPAIR VERIFICATION

- 1. Turn the ignition switch to ON (II).
- 2. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 3. **DO THE PCM IDLE LEARN PROCEDURE** .
- 4. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0111 IAT SENSOR CIRCUIT RANGE/PERFORMANCE PROBLEM			

Is DTC P0111 indicated?

YES : Check for poor connections or loose terminals at the MAF sensor/IAT sensor and the PCM, then go to step 1.

NO : Troubleshooting is complete. If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

DTC P0112: IAT SENSOR CIRCUIT LOW VOLTAGE

GETtheMANUALS.org

DTC Troubleshooting: P0112

Fig. 27: DTC Troubleshooting Flow Chart (P0112)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0116 ECT SENSOR 1 CIRCUIT RANGE/PERFORMANCE PROBLEM			

1. ECT sensor 1 check:
   - 1. Turn the ignition switch to ON (II).

GETtheMANUALS.org

- 2. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
ECT SENSOR 1	More than 176	°F		
	More than 80	°C		

Do the current condition(s) match the threshold?

YES : Note the value of ECT SENSOR 1, then go to step 3.

NO : Note the value of ECT SENSOR 1, then go to step 2.

2. Problem verification (low temperature):
   - 1. Note the value of ECT SENSOR 1 in the DATA LIST with the HDS.

Signal	Current conditions	
	Values	Unit
ECT SENSOR 1		

   - 2. Start the engine. Hold the engine speed at 3, 000 rpm without load (in P or N) until the radiator fan comes on, then let it idle.
   - 3. Check ECT SENSOR 1 in the DATA LIST with the HDS.

Signal	Current conditions	
	Values	Unit
ECT SENSOR 1		

Does ECT SENSOR 1 change 18 °F (10 °C) or more?

YES : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at ECT sensor 1 and the PCM.

NO : The failure is duplicated. **REPLACE ECT SENSOR 1** , then **do the repair verification** .

3. Problem verification (high temperature):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Open the hood, and let the engine cool for 3 hours.
   - 3. Turn the ignition switch to ON (II).
   - 4. Check ECT SENSOR 1 in the DATA LIST with the HDS.

Signal	Current conditions	
	Values	Unit

GETtheMANUALS.org

ECT SENSOR 1		

Does ECT SENSOR 1 change 18 °F (10 °C) or more?

YES : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at ECT sensor 1 and the PCM.

NO : The failure is duplicated. **REPLACE ECT SENSOR 1** , then **do the repair verification** .

REPAIR VERIFICATION

- 1. Turn the ignition switch to ON (II).
- 2. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** or **HOW TO TROUBLESHOOT THE A/T SYSTEM** .
- 3. **DO THE PCM IDLE LEARN PROCEDURE** .
- 4. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0116 ECT SENSOR 1 CIRCUIT RANGE/PERFORMANCE PROBLEM			

Is DTC P0116 indicated?

YES : Check for poor connections or loose terminals at ECT sensor 1 and the PCM, then go to step 1.

NO : Troubleshooting is complete. If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

DTC P0117: ECT SENSOR 1 CIRCUIT LOW VOLTAGE

GETtheMANUALS.org

DTC Troubleshooting: P0117

Fig. 35: DTC Troubleshooting Flow Chart (P0117)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0117 ECT SENSOR 1 CIRCUIT LOW VOLTAGE			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Check the parameter(s) below with the HDS.

GETtheMANUALS.org

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
ECT SENSOR 1	Less than 0.08	V		

Do the current condition(s) match the threshold?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at ECT sensor 1 and the PCM.

2. ECT sensor 1 performance check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     ECT sensor 1 2P connector

   - 3. Turn the ignition switch to ON (II).
   - 4. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
ECT SENSOR 1	Less than 0.08	V		

Do the current condition(s) match the threshold?

YES : Go to step 3.

NO : **REPLACE ECT SENSOR 1** , then **do the repair verification** .

3. Shorted wire check (TW line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connector.

     PCM connector B (49P)

   - 4. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     ECT sensor 1 2P connector: disconnected

     PCM connector B (49P): disconnected

GETtheMANUALS.org

Test circuit TW

Test point 1 ECT sensor 1 2P connector No. 2 (PNK)

Test point 2 Body ground

Fig. 36: Checking Continuity Between ECT Sensor 1 2P Connector No. 2 (PNK) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short in the TW wire between the PCM (B34) and ECT sensor 1, then **do the repair verification** .

NO : The TW wire is OK. **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

REPAIR VERIFICATION

- 1. Turn the ignition switch to LOCK (0).
- 2. Reconnect all connectors.
- 3. Turn the ignition switch to ON (II).
- 4. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 5. **DO THE PCM IDLE LEARN PROCEDURE** .
- 6. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0117 ECT SENSOR 1 CIRCUIT LOW VOLTAGE			

Is DTC P0117 indicated?

YES : Check for poor connections or loose terminals at ECT sensor 1 and the PCM. If the PCM was updated, **substitute a known-good PCM** See **PCM UPDATE** or **PCM REMOVAL AND INSTALLATION** , then

GETtheMANUALS.org

recheck. If the PCM was substituted, go to step 1.

NO : Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

DTC P0118: ECT SENSOR 1 CIRCUIT HIGH VOLTAGE

GETtheMANUALS.org

DTC Troubleshooting: P0118

Fig. 37: DTC Troubleshooting Flow Chart (P0118)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS**

GETtheMANUALS.org

SYSTEMS .

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0118 ECT SENSOR 1 CIRCUIT HIGH VOLTAGE			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
ECT SENSOR 1	More than 4.92	V		

Do the current condition(s) match the threshold?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at ECT sensor 1 and the PCM.

2. ECT sensor 1 check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     ECT sensor 1 2P connector

   - 3. Connect terminals A and B with a jumper wire.

     Terminal A ECT sensor 1 2P connector No. 1 (GRY)

     Terminal B ECT sensor 1 2P connector No. 2 (PNK)

Fig. 38: Identifying ECT Sensor 1 2P Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

   - 4. Turn the ignition switch to ON (II).

GETtheMANUALS.org

- 5. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
ECT SENSOR 1	More than 4.92	V		

Do the current condition(s) match the threshold?

YES : Go to step 3.

NO : **REPLACE ECT SENSOR 1** , then **do the repair verification** .

3. Determine possible failure area (TW line, SG2 line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Remove the jumper wire.
   - 3. Turn the ignition switch to ON (II).
   - 4. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     ECT sensor 1 2P connector: disconnected

     Test circuit TW

     Test point 1 ECT sensor 1 2P connector No. 2 (PNK)

     Test point 2 Body ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5.0 V?

YES : Go to step 4.

GETtheMANUALS.org

NO : Go to step 5.

4. Open wire check (SG2 line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connector.

     PCM connector B (49P)

   - 4. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     ECT sensor 1 2P connector: disconnected

     PCM connector B (49P): disconnected

     Test circuit SG2

     Test point 1 PCM connector B (49P) No. 44 (GRY)

     Test point 2 ECT sensor 1 2P connector No. 1 (GRY)

Fig. 40: Checking Continuity Between PCM Connector B (49P) No. 44 (GRY) And ECT Sensor 1 2P Connector No. 1 (GRY)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

GETtheMANUALS.org

YES : The SG2 wire is OK. **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

NO : Repair an open in the SG2 wire between the PCM (B44) and ECT sensor 1, then **do the repair verification** .

5. Open wire check (TW line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connector.

     PCM connector B (49P)

   - 4. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     ECT sensor 1 2P connector: disconnected

     PCM connector B (49P): disconnected

Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0122 TP SENSOR A CIRCUIT LOW VOLTAGE			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 3. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
TP SENSOR A	Less than 0.3	V		

Do the current condition(s) match the threshold?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the throttle body and the PCM.

2. Determine possible failure area (VCC3 line, TH 1 line):
   - 1. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0122 TP SENSOR A CIRCUIT LOW VOLTAGE			
P0222 TP SENSOR B CIRCUIT LOW VOLTAGE			

Are DTC P0122 and P0222 indicated at the same time?

YES : Go to step 4.

NO : Go to step 3.

GETtheMANUALS.org

3. Shorted wire check (TH 1 line):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Jump the SCS line with the HDS.
    - 3. Disconnect the following connectors.

      PCM connector C (49P)

      Throttle body 6P connector

    - 4. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      PCM connector C (49P): disconnected

      Throttle body 6P connector: disconnected

      Test circuit TH 1

      Test point 1 Throttle body 6P connector No. 6 (LT GRN)

      Test point 2 Body ground

Fig. 43: Checking Continuity Between Throttle Body 6P Connector No. 6 (LT GRN) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short in the TH 1 wire between the PCM (C30) and the throttle body, then **do the repair verification** .

NO : The TH 1 wire is OK. **Update the PCM** See **PCM UPDATE** or **PCM REMOVAL AND INSTALLATION** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

4. Determine possible failure area (VCC3 line, throttle body):

GETtheMANUALS.org

- 1. Turn the ignition switch to LOCK (0).
- 2. Disconnect the following connector.

  Throttle body 6P connector

- 3. Turn the ignition switch to ON (II).
- 4. Measure the voltage between test points 1 and 2.

  Test condition IG ON (II)

  Throttle body 6P connector: disconnected

  Test circuit VCC3(ETCS)

  Test point 1 Throttle body 6P connector No. 5 (TAN)

  Test point 2 Body ground

Fig. 44: Measuring Voltage Between Throttle Body 6P Connector No. 5 (TAN) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5.0 V?

YES : **Replace the throttle body** See **THROTTLE BODY REMOVAL AND INSTALLATION** , **THROTTLE BODY DISASSEMBLY AND REASSEMBLY** or **THROTTLE BODY CLEANING** , then **do the repair verification** .

NO : Go to step 5.

5. Open wire check (VCC3(ETCS) line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connector.

     PCM connector C (49P)

GETtheMANUALS.org

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0123 TP SENSOR A CIRCUIT HIGH VOLTAGE			

Is DTC P0123 indicated?

YES : Check for poor connections or loose terminals at the throttle body and the PCM. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then recheck. If the PCM was substituted, go to step 1.

NO : Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

DTC P0125: ECT SENSOR 1 MALFUNCTION/SLOW RESPONSE

GETtheMANUALS.org

DTC Troubleshooting: P0125

Fig. 50: DTC Troubleshooting Flow Chart (P0125)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0125 ECT SENSOR 1 MALFUNCTION/SLOW RESPONSE			

1. ECT sensor 1 check:
   - 1. Start the engine, and let it idle for 5 minutes or more.
   - 2. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit

GETtheMANUALS.org

ECT SENSOR 1	Less than 0	°F		
	Less than - 18	°C		

Do the current condition(s) match the threshold?

YES : Check for poor connections or loose terminals at ECT sensor 1, ECT sensor 2, and the PCM. If they are OK, **REPLACE ECT SENSOR 1** , then **do the repair verification** .

NO : Go to step 2.

2. Problem verification:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Allow the engine to cool to 104 °F (40 °C) or less.
   - 3. Start the engine, and let it idle until ECT SENSOR 1 goes up to about 158 °F (70 °C).

Signal	Current conditions	
	Values	Unit
ECT SENSOR 1		

   - 4. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
ECT SENSOR 2	About 158	°F		
	About 70	°C		

Do the current condition(s) match the threshold?

YES : The failure is duplicated. Go to step 3.

NO : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at ECT sensor 1, ECT sensor 2, and the PCM.

3. Thermostat check:
   - 1. CHECK THE THERMOSTAT .

Is the thermostat OK?

YES : Check for poor connections or loose terminals at ECT sensor 1, ECT sensor 2, and the PCM. If the connections and terminals are OK, **REPLACE ECT SENSOR 1** , then **do the repair verification** .

NO : REPLACE THE THERMOSTAT , then **do the repair verification** .

REPAIR VERIFICATION

GETtheMANUALS.org

- 1. Turn the ignition switch to ON (II).
- 2. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 3. Turn the ignition switch to LOCK (0).
- 4. Allow the engine to cool to 104 °F (40 °C) or less.
- 5. Start the engine, and let it idle until ECT SENSOR 1 goes up to about 158 °F (70 °C).

Signal	Current conditions	
	Values	Unit
ECT SENSOR 1		

- 6. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
ECT SENSOR 2	About 158	°F		
	About 70	°C		

Do the current condition(s) match the threshold?

YES : Check for poor connections or loose terminals at ECT sensor 1, ECT sensor 2, and the PCM, go to step 1.

NO : Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM UPDATE** or **PCM REMOVAL AND INSTALLATION** . If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

DTC P0128: COOLING SYSTEM MALFUNCTION

GETtheMANUALS.org

DTC Troubleshooting: P0128

Fig. 51: DTC Troubleshooting Flow Chart (P0128)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0128 COOLING SYSTEM MALFUNCTION			

1. Radiator fan control command check:
   - 1. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 3. Turn the blower switch off.
   - 4. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
FAN HIGH CTRL	OFF			
FAN LOW CTRL	OFF			

Are they OFF?

YES : Go to step 2.

NO : Wait until the FAN HIGH CTRL and the FAN LOW CTRL are off, then go to step 2.

2. Radiator fan operation check:
   - 1. Check the radiator fan operation.

Does the radiator fan keep running?

YES : Go to step 3.

NO : Wait until the FAN HIGH CTRL and FAN LOW CTRL are off, then go to step 4.

3. Radiator fan circuit and radiator fan relay check:
   - 1. Check the radiator fan circuit, and the radiator fan relay.

Is it OK?

YES : **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

GETtheMANUALS.org

NO : Repair the radiator fan circuit, and the radiator fan relay, then **do the repair verification** .

4. Problem verification:
   - 1. Let the engine cool until the coolant temperature is 104 °F (40 °C) or less.
   - 2. Note the value of ECT SENSOR 1 and ECT SENSOR 2 in the DATA LIST with the HDS.

Signal	Current conditions	
	Values	Unit
ECT SENSOR 1		
ECT SENSOR 2		

   - 3. Start the engine, and let it idle.
   - 4. Let the engine idle until ECT SENSOR 1 goes up 40 °F (22 °C) or more from the recorded temperature.

Signal	Current conditions	
	Values	Unit
ECT SENSOR 1		

   - 5. Check ECT SENSOR 2 in the DATA LIST with the HDS.

Signal	Current conditions	
	Values	Unit
ECT SENSOR 2		

   - 6. Compare the recorded value of ECT SENSOR 2 and the present value of ECT SENSOR 2.

Did temperature rise 13 °F (7 °C) or more?

YES : TEST THE THERMOSTAT and replace it if needed, then **do the repair verification** .

NO : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at ECT sensor 1, ECT sensor 2, and the PCM.

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Turn the ignition switch to ON (II).
- 2. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 3. Let the engine cool until the coolant temperature is between 21 °F (-6 °C) and 104 °F (40 °C).
- 4. **DO THE PCM IDLE LEARN PROCEDURE** .
- 5. Test-drive at a steady speed between 15-75 mph (25-120 km/h) for 10 minutes.
- 6. Monitor the OBD STATUS for DTC P0128 in the DTCs MENU with the HDS.

GETtheMANUALS.org

DTC Description	OBD STATUS
P0128 COOLING SYSTEM MALFUNCTION	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED : Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

FAILED : Go to step 1 and recheck. If the PCM was updated, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then check the OBD STATUS again.

NOT COMPLETED : Meet the test condition, and check the OBD STATUS again.

DTC P0133: A/F SENSOR (SENSOR 1) MALFUNCTION/SLOW RESPONSE

Fig. 52: DTC Troubleshooting Flow Chart (P0133)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board**

GETtheMANUALS.org

snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .

- **If DTC P0139 is stored at the same time as DTC P0133, troubleshoot DTC P0139 first, then recheck for DTC P0133.**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0133 A/F SENSOR (SENSOR 1) MALFUNCTION/SLOW RESPONSE			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 3. Start the engine. Hold the engine speed at 3, 000 rpm without load (in P or N) until the radiator fan comes on, then let it idle.
   - 4. Test-drive under these conditions:
     - Engine coolant temperature (ECT SENSOR 1) above 158 °F (70 °C)
     - Transmission in D
     - Engine speed between 1, 500-3, 000 rpm
     - Drive the vehicle at 25 mph (40 km/h) or less for 5 minutes, then drive at a steady speed of 32 mph (52 km/h) or more

Signal	Current conditions	
	Values	Unit
ECT SENSOR 1		
ENGINE SPEED		
VEHICLE SPEED		

   - 5. Monitor the OBD STATUS for DTC P0133 with the HDS.

DTC Description	OBD STATUS
P0133 A/F SENSOR (SENSOR 1) MALFUNCTION/SLOW RESPONSE	

Does the HDS indicate FAILED?

YES : **REPLACE THE A/F SENSOR (SENSOR 1)** , then **do the repair verification** .

NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the PCM. If the HDS indicates EXECUTING, keep driving until a result comes on. If the HDS indicates OUT OF CONDITION, go to step 3 on this step and recheck.

GETtheMANUALS.org

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Turn the ignition switch to ON (II).
- 2. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 3. **DO THE PCM IDLE LEARN PROCEDURE** .
- 4. Start the engine. Hold the engine speed at 3, 000 rpm without load (in P or N) until the radiator fan comes on, then let it idle.
- 5. Test-drive under these conditions:
  - Engine coolant temperature (ECT SENSOR 1) above 158 °F (70 °C)
  - Transmission in D
  - Engine speed between 1, 500-3, 000 rpm
  - Drive the vehicle at 25 mph (40 km/h) or less for 5 minutes, then drive at a steady speed of 32 mph (52 km/h) or more

Signal	Current conditions	
	Values	Unit
ECT SENSOR 1		
ENGINE SPEED		
VEHICLE SPEED		

- 6. Monitor the OBD STATUS for DTC P0133 in the DTCs MENU with the HDS.

DTC Description	OBD STATUS
P0133 A/F SENSOR (SENSOR 1) MALFUNCTION/SLOW RESPONSE	

Does the HDS indicate PASSED, FAILED, EXECUTING, or OUT OF CONDITION?

PASSED : Troubleshooting is complete. If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED : Go to step 1 and recheck.

EXECUTING : Keep the test condition until a result comes on.

OUT OF CONDITION : Meet the test condition, and check the OBD STATUS again.

DTC P0134: A/F SENSOR (SENSOR 1) HEATER SYSTEM MALFUNCTION

GETtheMANUALS.org

DTC Troubleshooting: P0134

Fig. 53: DTC Troubleshooting Flow Chart (P0134)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**
- **If the vehicle was out of fuel and the engine stalled before this DTC was stored, refuel and clear the DTC with the HDS.**
- **If DTC P0135 is stored at the same time as DTC P0134, troubleshoot DTC P0135 first, then recheck for DTC P0134.**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0134 A/F SENSOR (SENSOR 1) HEATER SYSTEM MALFUNCTION			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 3. Start the engine, and let it idle without load (in P or N) until the radiator fan comes on.

GETtheMANUALS.org

- 4. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0134 A/F SENSOR (SENSOR 1) HEATER SYSTEM MALFUNCTION			

Is DTC P0134 indicated?

YES : The failure is duplicated. **REPLACE THE A/F SENSOR (SENSOR 1)** , then **do the repair verification** .

NO : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the A/F sensor (Sensor 1), the PGM-FI subrelay, and the PCM.

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Turn the ignition switch to ON (II).
- 2. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 3. **DO THE PCM IDLE LEARN PROCEDURE** .
- 4. Monitor the OBD STATUS for DTC P0134 in the DTCs MENU with the HDS.

DTC Description	OBD STATUS
P0134 A/F SENSOR (SENSOR 1) HEATER SYSTEM MALFUNCTION	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED : Troubleshooting is complete. If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

FAILED : Go to step 1 and recheck.

NOT COMPLETED : Keep the test condition until a result comes on.

DTC P0135: A/F SENSOR (SENSOR 1) HEATER CIRCUIT MALFUNCTION

GETtheMANUALS.org

DTC Troubleshooting: P0135

Fig. 54: DTC Troubleshooting Flow Chart (P0135)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT**

GETtheMANUALS.org

THE FUEL AND EMISSIONS SYSTEMS or HOW TO TROUBLESHOOT THE A/T SYSTEM .

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0135 A/F SENSOR (SENSOR 1) HEATER CIRCUIT MALFUNCTION			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** or **HOW TO TROUBLESHOOT THE A/T SYSTEM** .
   - 3. Start the engine. Hold the engine speed at 3, 000 rpm without load (in P or N) until the radiator fan comes on, then let it idle.
   - 4. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0135 A/F SENSOR (SENSOR 1) HEATER CIRCUIT MALFUNCTION			

Is DTC P0135 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the A/F sensor (Sensor 1), the PGM-FI subrelay, and the PCM.

2. Fuse check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check the following fuse.

     Fuse No. A18 (15 A)

     Location Under-hood fuse/relay box

Is the fuse OK?

YES : Go to step 3.

NO : Go to step 9.

3. Relay check:
   - 1. Remove the PGM-FI subrelay (A) from the under-hood fuse/relay box.

GETtheMANUALS.org

Fig. 55: Identifying PGM-FI Relay Box Subrelay
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 2. **TEST THE PGM-FI SUBRELAY** .

Is the PGM-FI subrelay OK?

YES : Go to step 4.

NO : Replace the PGM-FI subrelay, then **do the repair verification** .

4. A/F sensor (Sensor 1) internal heater resistance check:
   - 1. Disconnect the following connector.

     A/F sensor (Sensor 1) 4P connector

   - 2. At the sensor side, measure the resistance between test points 1 and 2.

     Test condition IG LOCK (0)

     PGM-FI subrelay: disconnected

     A/F sensor (Sensor 1) 4P connector: disconnected

     Test circuit AFHT, LAF+,

     Test point 1 A/F sensor (Sensor 1) 4P connector No. 3 (A/F sensor (Sensor 1) side)

     Test point 2 A/F sensor (Sensor 1) 4P connector No. 4 (A/F sensor (Sensor 1) side)

GETtheMANUALS.org

Fig. 56: Measuring Resistance Between A/F Sensor (Sensor 1) 4P Connector No. 3 And No. 4
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there 2.2-2.7 ohms at room temperature?

YES : Go to step 5.

NO : **REPLACE THE A/F SENSOR (SENSOR 1)** , then **do the repair verification** .

5. A/F sensor (Sensor 1) internal circuit check:
   - 1. At the sensor side, check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     PGM-FI subrelay: disconnected

     A/F sensor (Sensor 1) 4P connector: disconnected

     Test circuit AFS-, LAF+

     Test point 1 A/F sensor (Sensor 1) 4P connector No. 1 (A/F sensor (Sensor 1) side)

     Test point 2 A/F sensor (Sensor 1) 4P connector No. 4 (A/F sensor (Sensor 1) side)

     Test circuit AFS-, AFHT

     Test point 1 A/F sensor (Sensor 1) 4P connector No. 1 (A/F sensor (Sensor 1) side)

     Test point 2 A/F sensor (Sensor 1) 4P connector No. 3 (A/F sensor (Sensor 1) side)

GETtheMANUALS.org

Fig. 57: Checking Continuity Between A/F Sensor (Sensor 1) 4P Connector No. 1 And No. 3
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : **REPLACE THE A/F SENSOR (SENSOR 1)** , then **do the repair verification** .

NO : Go to step 6.

6. Open wire check (AFHT line):
   - 1. Jump the SCS line with the HDS.
   - 2. Disconnect the following connector.

     PCM connector C (49P)

   - 3. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     PGM-FI subrelay: disconnected

     A/F sensor (Sensor 1) 4P connector: disconnected

     PCM connector C (49P): disconnected

     Test circuit AFHT

     Test point 1 PCM connector C (49P) No. 9 (GRN)

     Test point 2 A/F sensor (Sensor 1) 4P connector No. 3 (GRN)

GETtheMANUALS.org

Fig. 58: Checking Continuity Between PCM Connector C (49P) No. 9 (GRN) And A/F Sensor (Sensor 1) 4P Connector No. 3 (GRN)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The AFHT wire is OK. Go to step 7.

NO : Repair an open in the AFHT wire between the PCM (C9) and the A/F sensor (Sensor 1), then **do the repair verification** .

7. Open wire check (LAF+/FI SUB RLY OUT line):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     PGM-FI subrelay: disconnected

     A/F sensor (Sensor 1) 4P connector: disconnected

     PCM connector C (49P): disconnected

     Test circuit LAF+/FI SUB RLY OUT

     Test point 1 PGM-FI subrelay 4P socket No. 2 (Under-hood fuse/relay box)

     Test point 2 A/F sensor (Sensor 1) 4P connector No. 4 (LT BLU)

GETtheMANUALS.org

Fig. 59: Checking Continuity Between PGM-FI Subrelay 4P Socket No. 2 (Under-Hood Fuse/Relay Box) And A/F Sensor (Sensor 1) 4P Connector No. 4 (Lt Blu)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The LAF+/FI SUB RLY OUT wire is OK. Go to step 8.

NO : Repair an open in the AFHT+/FI SUB RLY OUT wire between the A/F sensor (Sensor 1) and the PGM-FI subrelay, then **do the repair verification** .

8. Open wire check (FI SUB RLY CL- line):
   - 1. Disconnect the following connector.

     PCM connector A (49P)

   - 2. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     PGM-FI subrelay: disconnected

     A/F sensor (Sensor 1) 4P connector: disconnected

     PCM connector C (49P): disconnected

     PCM connector A (49P): disconnected

     Test circuit FI SUB RLY CL-

     Test point 1 PCM connector A (49P) No. 20 (WHT)

GETtheMANUALS.org

Test point 2 PGM-FI subrelay 4P socket No. 4 (Under-hood fuse/relay box)

Fig. 60: Checking Continuity Between PCM Connector A (49P) No. 20 (WHT) And PGM-FI Subrelay 4P Socket No. 4 (Under-Hood Fuse/Relay Box)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The FI SUB RLY CL- wire is OK. **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

NO : Repair an open in the FI SUB RLY CL- wire between the PCM (A20) and the PGM-FI subrelay, then **do the repair verification** .

9. Shorted wire check (LAF+/FI SUB RLY OUT line):
    - 1. Remove the PGM-FI subrelay (A) and the A/C condenser fan relay (B) from the under-hood fuse/relay box.

GETtheMANUALS.org

Fig. 61: Identifying PGM-FI Subrelay And A/C Condenser Fan Relay
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 2. Jump the SCS line with the HDS.
- 3. Disconnect the following connector.

  PCM connector A (49P)

  A/F sensor (Sensor 1) 4P connector

  EVAP canister vent shut valve 2P connector

- 4. Check for continuity between test points 1 and 2.

  Test condition IG LOCK (0)

  PGM-FI subrelay: disconnected

  A/C condenser fan relay: disconnected

  PCM connector A (49P): disconnected

  A/F sensor (Sensor 1) 4P connector: disconnected

  EVAP canister vent shut valve 2P connector: disconnected

  Test circuit LAF+

  Test point 1 A/F sensor (Sensor 1) 4P connector No. 4 (LT BLU)

  Test point 2 Body ground

GETtheMANUALS.org

Fig. 62: Checking Continuity Between A/F Sensor (Sensor 1) 4P Connector No. 4 (LT BLU) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short in the LAF+/FI SUB RLY OUT wire between the PGM-FI subrelay, the A/F sensor (Sensor 1), the A/C condenser fan relay, EVAP canister vent shut valve, and the EVAP canister vent shut valve. Also replace the No. A18 (15 A) fuse, then **do the repair verification** .

NO : The LAF+/FI SUB RLY OUT wire is OK. Replace the under-hood fuse/relay box, then **do the repair verification** .

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Turn the ignition switch to LOCK (0).
- 2. Reconnect all connectors.
- 3. Turn the ignition switch to ON (II).
- 4. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** or **HOW TO TROUBLESHOOT THE A/T SYSTEM** .
- 5. **DO THE PCM IDLE LEARN PROCEDURE** .
- 6. Monitor the OBD STATUS for DTC P0135 in the DTCs MENU with the HDS.

DTC Description	OBD STATUS
P0135 A/F SENSOR (SENSOR 1) HEATER CIRCUIT MALFUNCTION	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED : Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

FAILED : Go to step 1 and recheck. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then check the OBD STATUS again.

NOT COMPLETED : Keep the test condition until a result comes on.

GETtheMANUALS.org

DTC P0137: SECONDARY HO2S (SENSOR 2) CIRCUIT LOW VOLTAGE

Fig. 63: DTC Troubleshooting Flow Chart (P0137)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS or HOW TO TROUBLESHOOT THE A/T SYSTEM .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0137 SECONDARY HO2S (SENSOR 2) CIRCUIT LOW VOLTAGE			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 3. Start the engine. Hold the engine speed at 3, 000 rpm without load (in P or N) until the radiator fan comes on.
   - 4. Monitor the OBD STATUS for DTC P0137 in the DTCs MENU with the HDS.

DTC Description	OBD STATUS
P0137 SECONDARY HO2S (SENSOR 2) CIRCUIT LOW VOLTAGE	

Does the HDS indicate FAILED?

YES : The failure is duplicated. Go to step 2.

NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at secondary HO2S (Sensor 2) and the PCM. If the HDS indicates EXECUTING, keep idling until a result comes on. If the HDS indicates OUT OF CONDITION, go to step 3 and recheck.

2. Determine possible failure area (secondary HO2S (Sensor 2), others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Secondary HO2S (Sensor 2) 4P connector

   - 3. Connect terminals A and B with a jumper wire.

     Terminal A Secondary HO2S (Sensor 2) 4P connector No. 1 (YEL)

     Terminal B Secondary HO2S (Sensor 2) 4P connector No. 2 (BRN)

GETtheMANUALS.org

Fig. 64: Identifying Secondary HO2S (Sensor 2) 4P Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 4. Turn the ignition switch to ON (II).
- 5. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
HO2S S2	Less than 0.12	V		

Do the current condition(s) match the threshold?

YES : Go to step 3.

NO : **REPLACE SECONDARY HO2S (SENSOR 2)** , then **do the repair verification** .

3. Determine possible failure area (short in SO2 line, short in SO2SG line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Remove the jumper wire from the secondary HO2S (Sensor 2) 4P connector.
   - 3. Turn the ignition switch to ON (II).
   - 4. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
HO2S S2	about 5.0	V		

Do the current condition(s) match the threshold?

YES : Go to step 4.

NO : Go to step 5.

4. Shorted wire check (SO2SG/SO2 SG line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.

GETtheMANUALS.org

- 3. Disconnect the following connector.

  PCM connector C (49P)

- 4. Check for continuity between test points 1 and 2.

  Test condition IG LOCK (0)

  PCM connector C (49P): disconnected

  Secondary HO2S (Sensor 2) 4P connector: disconnected

  Test circuit SO2SG

  Test point 1 PCM connector C (49P) No. 47 (GRY)

  Test point 2 Body ground

Fig. 65: Checking Continuity Between PCM Connector C (49P) No. 47 (GRY) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short in the SO2SG/SO2 SG wire between the PCM (C47) and secondary HO2S (Sensor 2), then **do the repair verification** .

NO : The SO2SG/SO2 SG wire is OK. **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

5. Shorted wire check (SO2 line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connector.

GETtheMANUALS.org

PCM connector B (49P)

- 4. Check for continuity between test points 1 and 2.

  Test condition IG LOCK (0)

  Secondary HO2S (Sensor 2) 4P connector: disconnected

  PCM connector B (49P): disconnected

  Test circuit SO2

  Test point 1 PCM connector B (49P) No. 46 (WHT)

  Test point 2 Body ground

Fig. 66: Checking Continuity Between PCM Connector B (49P) No. 46 (WHT) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short in the SO2 wire between the PCM (B46) and secondary HO2S (Sensor 2), then **do the repair verification** .

NO : The SO2 wire is OK. **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Reconnect all connectors.
- 2. Turn the ignition switch to ON (II).
- 3. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** or **HOW TO TROUBLESHOOT THE A/T SYSTEM** .

GETtheMANUALS.org

- 4. **DO THE PCM IDLE LEARN PROCEDURE** .
- 5. Start the engine. Hold the engine speed at 3, 000 rpm without load (in P or N) until the radiator fan comes on, then let it idle.
- 6. Monitor the OBD STATUS for DTC P0137 in the DTCs MENU with the HDS.

DTC Description	OBD STATUS
P0137 SECONDARY HO2S (SENSOR 2) CIRCUIT LOW VOLTAGE	

Does the HDS indicate PASSED, FAILED, EXECUTING, or OUT OF CONDITION?

PASSED : Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

FAILED : Go to step 1 and recheck. If the PCM was updated, **substitute a known-good PCM** See **PCM UPDATE** or **PCM REMOVAL AND INSTALLATION** , then check the OBD STATUS again.

EXECUTING : Keep the test condition until a result comes on.

OUT OF CONDITION : Meet the test condition, and check the OBD STATUS again.

DTC P0138: SECONDARY HO2S (SENSOR 2) CIRCUIT HIGH VOLTAGE

GETtheMANUALS.org

DTC Troubleshooting: P0138

Fig. 67: DTC Troubleshooting Flow Chart (P0138)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and**

GETtheMANUALS.org

review the general troubleshooting information See HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS or HOW TO TROUBLESHOOT THE A/T SYSTEM .

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0138 SECONDARY HO2S (SENSOR 2) CIRCUIT HIGH VOLTAGE			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 3. Start the engine. Hold the engine speed at 3, 000 rpm without load (in P or N) until the radiator fan comes on, then let it idle.
   - 4. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
HO2S S2	More than 1.27	V		

Do the current condition(s) match the threshold?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at secondary HO2S (Sensor 2) and the PCM.

2. Determine possible failure area (secondary HO2S (Sensor 2), others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Secondary HO2S (Sensor 2) 4P connector

   - 3. Connect terminals A and B with a jumper wire.

     Terminal A Secondary HO2S (Sensor 2) 4P connector No. 1 (YEL)

     Terminal B Secondary HO2S (Sensor 2) 4P connector No. 2 (BRN)

GETtheMANUALS.org

Fig. 68: Checking Continuity Between Secondary HO2S (Sensor 2) 4P Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 4. Turn the ignition switch to ON (II).
- 5. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
HO2S S2	More than 1.27	V		

Do the current condition(s) match the threshold?

YES : Go to step 3.

NO : **REPLACE SECONDARY HO2S (SENSOR 2)** , then **do the repair verification** .

3. Open wire check (SO2SG/SO2 SG line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Remove the jumper wire from the secondary HO2S (Sensor 2) 4P connector.
   - 3. Connect terminals A and B with a jumper wire.

   Terminal A Secondary HO2S (Sensor 2) 4P connector No. 1 (YEL)

   Terminal B Body ground

Fig. 69: Identifying Secondary HO2S (Sensor 2) 4P Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

- 4. Turn the ignition switch to ON (II).
- 5. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
HO2S S2	More than 1.27	V		

Do the current condition(s) match the threshold?

YES : The SO2SG/SO2 SG wire is OK. Go to step 4.

NO : Repair an open in the SO2SG/SO2 SG wire between the PCM (C47) and secondary HO2S (Sensor 2), then **do the repair verification** .

4. Open wire check (SO2 line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connector.

     PCM connector B (49P)

   - 4. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Secondary HO2S (Sensor 2) 4P connector terminal No. 1: jumped to body ground

     PCM connector B (49P): disconnected

     Test circuit SO2

     Test point 1 PCM connector B (49P) No. 46 (WHT)

     Test point 2 Body ground

GETtheMANUALS.org

Fig. 70: Checking Continuity Between PCM Connector B (49P) No. 46 (WHT) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The SO2 wire is OK. **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

NO : Repair an open in the SO2 wire between the PCM (B46) and secondary HO2S (Sensor 2), then **do the repair verification** .

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Reconnect all connectors.
- 2. Turn the ignition switch to ON (II).
- 3. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 4. **DO THE PCM IDLE LEARN PROCEDURE** .
- 5. Start the engine, and let it idle without load (in P or N) until the radiator fan comes on.
- 6. Test-drive under these conditions:
  - Engine coolant temperature (ECT SENSOR 1) above 158 °F (70 °C)
  - Transmission in D
  - Engine speed between 1, 500-3, 000 rpm
  - Drive 1 minute or more

Signal	Current conditions	
	Values	Unit
ECT SENSOR 1		
ENGINE SPEED		

- 7. Monitor the OBD STATUS for DTC P0138 in the DTCs MENU with the HDS.

GETtheMANUALS.org

DTC Description	OBD STATUS
P0138 SECONDARY HO2S (SENSOR 2) CIRCUIT HIGH VOLTAGE	

Does the HDS indicate PASSED, FAILED, EXECUTING, or OUT OF CONDITION?

PASSED : Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

FAILED : Go to step 1 and recheck. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then check the OBD STATUS again.

EXECUTING : Keep the test condition until a result comes on.

OUT OF CONDITION : Meet the test condition, and check the OBD STATUS again.

DTC P0139: SECONDARY HO2S (SENSOR 2) SLOW RESPONSE

Fig. 71: DTC Troubleshooting Flow Chart (P0139)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**
- **If the exhaust leaks from the exhaust system, this DTC will be set. Check for damage in the exhaust pipe, and repair it if needed.**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0139 SECONDARY HO2S (SENSOR 2) SLOW RESPONSE			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 3. Start the engine. Hold the engine speed at 3, 000 rpm without load (in P or N) until the radiator fan comes on, then let it idle.
   - 4. Test-drive under these conditions:
     - Engine coolant temperature (ECT SENSOR 1) above 158 °F (70 °C)
     - Transmission in D
     - Drive at a steady speed between 55-75 mph (90-120 km/h) for 1 minute, then decelerate (with the throttle fully closed) for 10 seconds

Signal	Current conditions	
	Values	Unit
ECT SENSOR 1		
VEHICLE SPEED		

   - 5. Monitor the OBD STATUS for DTC P0139 with the HDS.

DTC Description	OBD STATUS
P0139 SECONDARY HO2S (SENSOR 2) SLOW RESPONSE	

Does the HDS indicate FAILED?

YES : The failure is duplicated. **REPLACE SECONDARY HO2S (SENSOR 2)** , then **do the repair verification** .

NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at secondary HO2S (Sensor 2) and the PCM. If the HDS indicates EXECUTING, keep driving until a result comes on. If the HDS indicates OUT OF CONDITION, go to step 3 on this step and recheck.

GETtheMANUALS.org

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Turn the ignition switch to LOCK (0).
- 2. Reconnect all connectors.
- 3. Turn the ignition switch to ON (II).
- 4. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** or **HOW TO TROUBLESHOOT THE A/T SYSTEM** .
- 5. **DO THE PCM IDLE LEARN PROCEDURE** .
- 6. Start the engine. Hold the engine speed at 3, 000 rpm without load (in P or N) until the radiator fan comes on, then let it idle.
- 7. Test-drive under these conditions:
  - Engine coolant temperature (ECT SENSOR 1) above 158 °F (70 °C)
  - Transmission in D
  - Drive at a steady speed between 55-75 mph (90-120 km/h) for 1 minute, then decelerate (with the throttle fully closed) for 10 seconds

Signal	Current conditions	
	Values	Unit
ECT SENSOR 1		
VEHICLE SPEED		

- 8. Monitor the OBD STATUS for DTC P0139 with the HDS.

DTC Description	OBD STATUS
P0139 SECONDARY HO2S (SENSOR 2) SLOW RESPONSE	

Does the HDS indicate PASSED, FAILED, EXECUTING, or OUT OF CONDITION?

PASSED : Troubleshooting is complete. If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED : Go to step 1 and recheck.

EXECUTING : Keep the test condition until a result comes on.

OUT OF CONDITION : Meet the test condition, and check the OBD STATUS again.

DTC P0141: SECONDARY HO2S (SENSOR 2) HEATER CIRCUIT MALFUNCTION

GETtheMANUALS.org

DTC Troubleshooting: P0141

Fig. 72: DTC Troubleshooting Flow Chart (P0141)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and**

GETtheMANUALS.org

review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0141 SECONDARY HO2S (SENSOR 2) HEATER CIRCUIT MALFUNCTION			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 3. Start the engine, and let it idle.
   - 4. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0141 SECONDARY HO2S (SENSOR 2) HEATER CIRCUIT MALFUNCTION			

Is DTC P0141 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at secondary HO2S (Sensor 2), and the PCM.

2. Shorted wire check (IG1 ACG line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check the following fuse.

     Fuse No. B2 (10 A)

     Location Under-dash fuse/relay box

Is the fuse OK?

YES : The IG1 ACG wire is not shorted. Go to step 3.

NO : Repair a short in the IG1 ACG wire between secondary HO2S (Sensor 2) and the No. B2 (10 A) fuse. Also replace the No. B2 (10 A) fuse, then **do the repair verification** .

3. Secondary HO2S (Sensor 2) internal heater resistance check:

GETtheMANUALS.org

- 1. Disconnect the following connector.

  Secondary HO2S (Sensor 2) 4P connector

- 2. At the sensor side, measure the resistance between test points 1 and 2.

  Test condition IG LOCK (0)

  Secondary HO2S (Sensor 2) 4P connector: disconnected

  Test circuit IG1 ACG, SO2HT

  Test point 1 Secondary HO2S (Sensor 2) 4P connector No. 3 (secondary HO2S (Sensor 2) side)

  Test point 2 Secondary HO2S (Sensor 2) 4P connector No. 4 (secondary HO2S (Sensor 2) side)

Fig. 73: Measuring Resistance Between Secondary HO2S Sensor 2 4P Connector No. 3 And No. 4
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there 5.4-7.3 ohms at room temperature?

YES : Go to step 4.

NO : **REPLACE SECONDARY HO2S (SENSOR 2)** , then **do the repair verification** .

4. Secondary HO2S (Sensor 2) internal circuit check:
   - 1. At the sensor side, check for continuity under the following conditions.

     Test condition IG LOCK (0)

     Secondary HO2S (Sensor 2) 4P connector: disconnected

     Test circuit IG1 ACG

     Test point 1 Secondary HO2S (Sensor 2) 4P connector No. 3 (secondary HO2S (Sensor 2) side)

GETtheMANUALS.org

Test point 2 Body ground

Test circuit SO2HT

Test point 1 Secondary HO2S (Sensor 2) 4P connector No. 4 (secondary HO2S (Sensor 2) side)

Test point 2 Body ground

Fig. 74: Checking Continuity Between Secondary HO2S (Sensor 2) 4P Connector No. 4 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : **REPLACE SECONDARY HO2S (SENSOR 2)** , then **do the repair verification** .

NO : Go to step 5.

5. Determine possible failure area (SO2HT line, others):
   - 1. Turn the ignition switch to ON (II).
   - 2. Measure the voltage between test points 1 and 2.

   Test condition IG ON (II)

   Secondary HO2S (Sensor 2) 4P connector: disconnected

   Test circuit IG1 ACG, SO2HT

   Test point 1 Secondary HO2S (Sensor 2) 4P connector No. 3 (RED)

   Test point 2 Secondary HO2S (Sensor 2) 4P connector No. 4 (LT BLU)

GETtheMANUALS.org

Fig. 75: Measuring Voltage Between Secondary HO2S (Sensor 2) 4P Connector No. 3 (RED) And No. 4 (LT BLU)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : Go to step 6.

NO : Go to step 7.

6. Shorted wire check (SO2HT line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connector.

     PCM connector B (49P)

   - 4. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Secondary HO2S (Sensor 2) 4P connector: disconnected

     PCM connector B (49P): disconnected

     Test circuit SO2HT

     Test point 1 PCM connector B (49P) No. 4 (LT GRN)

     Test point 2 Body ground

GETtheMANUALS.org

Fig. 76: Checking Continuity Between PCM Connector B (49P) No. 4 (LT GRN) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short in the SO2HT wire between the PCM (B4) and secondary HO2S (Sensor 2), then **do the repair verification** .

NO : The SO2HT wire is OK. **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

7. Open wire check (IG1 ACG line):
   - 1. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     Secondary HO2S (Sensor 2) 4P connector: disconnected

     Test circuit IG1 ACG

     Test point 1 Secondary HO2S (Sensor 2) 4P connector No. 3 (RED)

     Test point 2 Body ground

Fig. 77: Measuring Voltage Between Secondary HO2S (Sensor 2) 4P Connector No. 3 (RED)

GETtheMANUALS.org

<u>And Body Ground</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The IG1 ACG wire is OK. Go to step 8.

NO : Repair an open in the IG1 ACG wire between the No. B2 (10 A) fuse and secondary HO2S (Sensor 2), then **do the repair verification** .

8. Open wire check (SO2HT line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connector.

     PCM connector B (49P)

   - 4. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Secondary HO2S (Sensor 2) 4P connector: disconnected

     PCM connector B (49P): disconnected

     Test circuit SO2HT

     Test point 1 PCM connector B (49P) No. 4 (LT GRN)

     Test point 2 Secondary HO2S (Sensor 2) 4P connector No. 4 (LT BLU)

GETtheMANUALS.org

Fig. 78: Checking Continuity Between PCM Connector B (49P) No. 4 (LT GRN) And Secondary HO2S (Sensor 2) 4P Connector No. 4 (LT BLU)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The SO2HT wire is OK. **UPDATE THE PCM** if it does not have the latest software, or **SUBSTITUTE A KNOWN-GOOD PCM** , then **do the repair verification** .

NO : Repair an open in the SO2HT wire between the PCM (B4) and secondary HO2S (Sensor 2), then **do the repair verification** .

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Turn the ignition switch to LOCK (0).
- 2. Reconnect all connectors.
- 3. Turn the ignition switch to ON (II).
- 4. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** or **HOW TO TROUBLESHOOT THE A/T SYSTEM** .
- 5. **DO THE PCM IDLE LEARN PROCEDURE** .
- 6. Monitor the OBD STATUS for DTC P0141 in the DTCs MENU with the HDS.

DTC Description	OBD STATUS
P0141 SECONDARY HO2S (SENSOR 2) HEATER CIRCUIT MALFUNCTION	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED : Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . If any other Pending or Confirmed DTCs are

GETtheMANUALS.org

indicated, go to the indicated DTC's troubleshooting.

FAILED : Go to step 1 and recheck. If the PCM was updated, **substitute a known-good PCM** See **PCM UPDATE** or **PCM REMOVAL AND INSTALLATION** , then check the OBD STATUS again.

NOT COMPLETED : Meet the test condition, and check the OBD STATUS again.

DTC P0171: FUEL SYSTEM TOO LEAN

GETtheMANUALS.org

Fig. 79: DTC Troubleshooting Flow Chart (P0171)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board**

GETtheMANUALS.org

snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .

- **Do not clear the DTC or reset the PCM before beginning this troubleshooting procedure until instructed to clear it. Clearing the DTC or resetting the PCM can delete valuable diagnostic information, even if the on-board snapshot and the freeze data is saved.**
- **Inspect for aftermarket fuel system and engine components before beginning troubleshooting.**
- **If any of the DTCs listed below are stored at the same time as DTC P0171, troubleshoot those DTCs first, then recheck for P0171.**

P0101, P0102, P0103: MAF sensor

P0106, P0107, P0108: MAP sensor

P0133, P1172, P1157, P2238, P2252, P2A00: A/F sensor (Sensor 1)

P0134, P0135: A/F sensor (Sensor 1) heater

P0137, P0138, P0139, P2270: Secondary HO2S (Sensor 2)

P0201, P0202, P0203, P0204: Fuel injector

P0141: Secondary HO2S (Sensor 2) heater

P0443, P0496: EVAP canister purge valve

P2646, P2647, P2648, P2649: VTEC system

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0171 FUEL SYSTEM TOO LEAN			

1. Problem verification-Idle:
   - 1. Start the engine, and let it idle without load (in P or N).
   - 2. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
AF FB (ST FUEL TRIM)	More than 1.33			

Do the current condition(s) match the threshold?

YES : The AF FB (ST FUEL TRIM) is too high at idle. Go to step 3.

GETtheMANUALS.org

NO : The AF FB (ST FUEL TRIM) is OK at idle. Go to step 2.

2. Problem verification-On-board Snapshot:
   - 1. Review the on-board snapshot and record the value of the parameters below when AF FB (ST FUEL TRIM) was at its highest point.

ENGINE SPEED	
VEHICLE SPEED	
REL TP SENSOR	
APP SENSOR	

   - 2. Drive the vehicle according to the conditions determined above.

Signal	Current conditions	
	Values	Unit
ENGINE SPEED		
VEHICLE SPEED		
REL TP SENSOR		
APP SENSOR		

   - 3. Check the parameter(s) below with the HDS while driving.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
AF FB (ST FUEL TRIM)	More than 1.33			

Do the current condition(s) match the threshold under the on-board snapshot conditions?

YES : AF FB (ST FUEL TRIM) is too high under the conditions above. Go to step 3.

NO : AF FB (ST FUEL TRIM) is OK under the same conditions as the on-board snapshot. The system is normal at this time.

3. Check for MAF Sensor Debris:
   - 1. **REMOVE THE MAF SENSOR/IAT SENSOR** .
   - 2. Check for lint, bugs, and other foreign objects in the sensor.

Is there debris in the MAF sensor?

YES : Remove the debris from the MAF sensor and then use a vacuum cleaner to remove any debris from the air cleaner housing, then **do the repair verification** .

NO : Reinstall the MAF sensor/IAT sensor. Go to step 4.

GETtheMANUALS.org

4. Check for Disconnected or Damaged Components:
    - 1. Visually inspect each of the components below for disconnected hoses, cracks, or damage:
        - Crankcase breather hose (A)
        - Air cleaner housing (B)
        - Oil cap (C) and dipstick (D)

Fig. 80: Identifying Breather Hose, Air Cleaner Housing, Oil Cap And Dipstick
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Are any components disconnected or damaged?

YES : Repair as necessary, then **do the repair verification** .

NO : Go to step 5.

5. Check Brake Booster:
    - 1. Continue to let the engine idle.
    - 2. Pinch the brake booster vacuum hose (A) connecting to the intake manifold.

GETtheMANUALS.org

Fig. 81: Identifying Brake Booster Vacuum Hose
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 3. Check the parameter(s) below with the HDS with the vacuum hose pinched.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
AF FB (ST FUEL TRIM)	More than 1.33			

Do the current condition(s) match the threshold?

YES : The brake booster is not leaking. Go to step 6.

NO : There is a leak in the brake booster or hoses. Check the brake booster vacuum hoses for leaks. If no leaks are found, replace the brake booster, then **do the repair verification** .

6. Check PCV System:
   - 1. Continue to let the engine idle.
   - 2. Pinch the PCV vacuum hose (A).

GETtheMANUALS.org

Fig. 82: Identifying PCV Vacuum Hose
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 3. Check the parameter(s) below with the HDS with the vacuum hose pinched.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
AF FB (ST FUEL TRIM)	More than 1.33			

Do the current condition(s) match the threshold?

YES : The PCV system is not leaking. Go to step 7.

NO : There is a leak in the PCV system. Check the vacuum hoses for leaks and repair as needed, then **do the repair verification** .

7. Check MAF Sensor Reading:
   - 1. Start the engine and hold the engine speed at 3, 000 rpm until the radiator fan comes on.
   - 2. Make sure the following conditions are met:
     - ECT Sensor 1 above 158 °F (70 °C)
     - Transmission in P or N
     - All engine and electrical loads turned off

Signal	Current conditions	

GETtheMANUALS.org

	Values	Unit
ECT SENSOR 1		

- 3. Monitor the ENGINE SPEED in the DATA LIST with the HDS, then hold the engine speed at 2, 500 rpm with the accelerator pedal held steady.

Signal	Current conditions	
	Values	Unit
ENGINE SPEED		

- 4. Check the parameter(s) below with the HDS at 2, 500 rpm.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
MAF SENSOR	7.0-8.6	g/s		

Do the current condition(s) match the threshold?

YES : The MAF sensor is OK. Go to step 8.

NO : The MAF sensor is reading incorrectly. Inspect for a cracked, damaged, or incorrectly installed air cleaner assembly. If OK, **REPLACE THE MAF SENSOR/IAT SENSOR** , then **do the repair verification** .

8. Check Fuel Pressure:
   - 1. Check the fuel pressure under the conditions when AF FB (ST FUEL TRIM) is 1.33 or more.

Signal	Current conditions	
	Values	Unit
AF FB (ST FUEL TRIM)		

Is the fuel pressure between 330-380 kPa (3.4-3.9 kgf/cm^2 , 48-55 psi)?

YES : The fuel pressure is OK. Go to step 9.

NO : **Replace the fuel tank unit** See FUEL TANK UNIT DISASSEMBLY AND REASSEMBLY or FUEL TANK UNIT REMOVAL AND INSTALLATION , then **do the repair verification** .

9. Check for Intake Manifold Vacuum Leaks:
   - 1. Disconnect the intake air duct from the air cleaner housing.
   - 2. Connect a large intake manifold adaptor cone into the intake air duct from the OTC LeakMaster evaporative emissions system tester kit.
   - 3. Use the OTC LeakMaster evaporative emissions system tester to direct smoke into the intake manifold.

GETtheMANUALS.org

- 4. Inspect each of the areas below for signs of leaks:
  - Intake manifold and gaskets
  - Throttle body and gasket
  - Air intake ducting
  - All vacuum and air hoses

Are there any leaks?

YES : Repair the vacuum leak, then **do the repair verification** .

NO : Reconnect any disconnected components, then go to step 10.

10. Replace Fuel Injectors:
    - 1. REPLACE THE FUEL INJECTORS WITH KNOWN-GOOD INJECTORS .
    - 2. Operate the vehicle under the same conditions where AF FB (ST FUEL TRIM) was 1.33 or more.

ENGINE SPEED	
VEHICLE SPEED	
REL TP SENSOR

- 3. Check the parameter(s) below with the HDS while driving.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
AF FB (ST FUEL TRIM)	More than 1.33			

Do the current condition(s) match the threshold under the on-board snapshot conditions?

YES : The fuel injectors are not the cause of the high AF FB (ST FUEL TRIM) value. Go to step 11.

NO : The fuel injectors were causing the high AF FB (ST FUEL TRIM) value. REPLACE THE ORIGINAL INJECTORS , then **do the repair verification** .

11. Replace A/F Sensor (Sensor 1)

GETtheMANUALS.org

- 1. **REPLACE THE A/F SENSOR (SENSOR 1) WITH A KNOWN-GOOD SENSOR** .
- 2. Operate the vehicle under the same conditions where AF FB (ST FUEL TRIM) was 1.33 or more.

- 3. Check the parameter(s) below with the HDS while driving.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
AF FB (ST FUEL TRIM)	More than 1.33			

Do the current condition(s) match the threshold under the on-board snapshot conditions?

YES : The A/F sensor (Sensor 1) is not the cause of the high AF FB (ST FUEL TRIM) value. Go to step 12.

NO : The A/F sensor (Sensor 1) was causing the high AF FB (ST FUEL TRIM) value. **REPLACE THE ORIGINAL A/F SENSOR (SENSOR 1)** , then **do the repair verification** .

12. Replace Fuel:

NOTE: **There is an increased likelihood of a fuel related issue if the misfire appeared shortly after refueling. The MIL DIST (MIL Distance) value in the DATA LIST in combination with the fuel level may help you make this determination.**

- 1. Remove the fuel tank unit and then drain and refill the fuel tank with known-good fuel.
- 2. Operate the vehicle under the same conditions where AF FB (ST FUEL TRIM) was 1.33 or more.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
AF FB (ST FUEL TRIM)	More than 1.33			

Do the current condition(s) match the threshold under the on-board snapshot conditions?

YES : AF FB (ST FUEL TRIM) is too high. Go to step 3.

NO : AF FB (ST FUEL TRIM) is OK. Troubleshooting is complete.

DTC P0172: FUEL SYSTEM TOO RICH

GETtheMANUALS.org

DTC Troubleshooting: P0172

Fig. 83: DTC Troubleshooting Flow Chart (P0172)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board**

GETtheMANUALS.org

snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .

- **Do not clear the DTC or reset the PCM before beginning this troubleshooting procedure until instructed to clear it. Clearing the DTC or resetting the PCM can delete valuable diagnostic information, even if the on-board snapshot and the freeze data is saved.**
- **Inspect for aftermarket fuel system and engine components before beginning troubleshooting.**
- **If any of the DTCs listed below are stored at the same time as P0172, troubleshoot those DTCs first, then recheck for P0172.**

P0101, P0102, P0103: MAF sensor

P0106, P0107, P0108: MAP sensor

P0133, P1172, P1157, P2238, P2252, P2A00: A/F sensor (Sensor 1)

P0134, P0135: A/F sensor (Sensor 1) heater

P0137, P0138, P0139, P2270: Secondary HO2S (Sensor 2)

P0141: Secondary HO2S (Sensor 2) heater

P0443, P0496: EVAP canister purge valve

P2646, P2647, P2648, P2649: VTEC system

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0172 FUEL SYSTEM TOO RICH B1			

1. Problem verification-Idle:
   - 1. Start the engine, and let it idle without load (in P or N).
   - 2. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
AF FB (ST FUEL TRIM)	Less than 0.79			

Do the current condition(s) match the threshold?

YES : The AF FB (ST FUEL TRIM) is too low at idle. Go to step 3.

NO : The AF FB (ST FUEL TRIM) is OK at idle. Go to step 2.

GETtheMANUALS.org

2. Problem verification-On-board Snapshot:
   - 1. Review the on-board snapshot and record the value of the parameters below when AF FB (ST FUEL TRIM) was at its lowest point.

ENGINE SPEED	
VEHICLE SPEED	
REL TP SENSOR	
APP SENSOR	

   - 2. Drive the vehicle according to the conditions determined above.

Signal	Current conditions	
	Values	Unit
ENGINE SPEED		
VEHICLE SPEED		
REL TP SENSOR		
APP SENSOR		

   - 3. Check the parameter(s) below with the HDS while driving.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
AF FB (ST FUEL TRIM)	Less than 0.79			

Do the current condition(s) match the threshold under the on-board snapshot conditions?

YES : AF FB (ST FUEL TRIM) is too low under the conditions above. Go to step 3.

NO : AF FB (ST FUEL TRIM) is OK under the same conditions as the on-board snapshot. The system is normal at this time.

3. Check for MAF Sensor Debris:
   - 1. **REMOVE THE MAF SENSOR/IAT SENSOR** .
   - 2. Check for lint, bugs, and other foreign objects in the sensor.

Is there debris in the MAF sensor?

YES : Remove the debris from the MAF sensor and then use a vacuum cleaner to remove any debris from the air cleaner housing, then **do the repair verification** .

NO : Reinstall the MAF sensor/IAT sensor. Go to step 4.

4. Check Fuel Pressure:

GETtheMANUALS.org

- 1. Check the fuel pressure under the conditions when AF FB (ST FUEL TRIM) is 0.79 or less.

Signal	Current conditions	
	Values	Unit
AF FB (ST FUEL TRIM)		

Is the fuel pressure between 330-380 kPa (3.4-3.9 kgf/cm^2 , 48-55 psi)?

YES : The fuel pressure is OK. Go to step 5.

NO : **Replace the fuel tank unit** See FUEL TANK UNIT REMOVAL AND INSTALLATION or FUEL TANK UNIT DISASSEMBLY AND REASSEMBLY , then **do the repair verification** .

5. Check MAF Sensor Reading:
   - 1. Start the engine and hold the engine speed at 3, 000 rpm until the radiator fan comes on.
   - 2. Make sure the following conditions are met:
     - ECT Sensor 1 above 158 °F (70 °C)
     - Transmission in P or N
     - All engine and electrical loads turned off

Signal	Current conditions	
	Values	Unit
ECT SENSOR 1		

   - 3. Monitor the ENGINE SPEED in the DATA LIST with the HDS, then hold the engine speed at 2, 500 rpm with the accelerator pedal held steady.

Signal	Current conditions	
	Values	Unit
ENGINE SPEED		

   - 4. Check the parameter(s) below with the HDS at 2, 500 rpm.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
MAF SENSOR	7.0-8.6	g/s		

Do the current condition(s) match the threshold?

YES : The MAF sensor is OK. Go to step 6.

NO : The MAF sensor is reading incorrectly. Inspect for a cracked, damaged, or incorrectly installed air cleaner assembly. If OK, **REPLACE THE MAF SENSOR/IAT SENSOR** , then **do the repair**

GETtheMANUALS.org

verification .

6. Check Engine Oil:
    - 1. Start the engine, and let it idle.
    - 2. Gently pinch the PCV vacuum hose (A).

Fig. 84: Identifying PCV Vacuum Hose
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 3. Check the parameter(s) below with the HDS with the vacuum hose pinched.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
AF FB (ST FUEL TRIM)	Less than 0.79			

Do the current condition(s) match the threshold?

YES : The engine oil is OK. Go to step 7.

NO : The engine oil is contaminated. REPLACE THE ENGINE OIL AND OIL FILTER , then **do the repair verification** .

7. Replace Fuel Injectors:
    - 1. REPLACE THE FUEL INJECTORS WITH KNOWN-GOOD INJECTORS .
    - 2. Operate the vehicle under the same conditions where AF FB (ST FUEL TRIM) was 0.79 or less.

P0203 No. 3 CYLINDER INJECTOR CIRCUIT MALFUNCTION			
P0204 No. 4 CYLINDER INJECTOR CIRCUIT MALFUNCTION			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** or **HOW TO TROUBLESHOOT THE A/T SYSTEM** .
   - 3. Start the engine, and let it idle for 20 seconds.
   - 4. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0201 No. 1 CYLINDER INJECTOR CIRCUIT MALFUNCTION			
P0202 No. 2 CYLINDER INJECTOR CIRCUIT MALFUNCTION			
P0203 No. 3 CYLINDER INJECTOR CIRCUIT MALFUNCTION			
P0204 No. 4 CYLINDER INJECTOR CIRCUIT MALFUNCTION			

Is DTC P0201, P0202, P0203, or P0204 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the injectors and the PCM.

2. Injector internal resistance check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector(s).

GETtheMANUALS.org

Injector 2P connector (problem cylinder)

- 3. At the injector side, measure the resistance between test points 1 and 2.

  Test condition IG LOCK (0)

  Injector 2P connector (problem cylinder): disconnected

  Test circuit IGP(INJ), INJ

  Test point 1 Injector 2P connector No. 1 (injector side)

  Test point 2 Injector 2P connector No. 2 (injector side)

Fig. 86: Measuring Resistance Between Injector 2P Connector No. 1 And No. 2 (Injector Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there 10-13 ohms?

YES : The injector is OK. Go to step 3.

NO : REPLACE THE PROBLEM INJECTOR , then **do the repair verification** .

3. Open wire check (IGP line):
   - 1. Turn the ignition switch to ON (II).
   - 2. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     Injector 2P connector (problem cylinder): disconnected

     Test circuit IGP(INJ)

     Test point 1 Injector 2P connector No. 1 (YEL)

     Test point 2 Body ground

GETtheMANUALS.org

Fig. 87: Measuring Voltage Between Injector 2P Connector No. 1 (YEL) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The IGP(INJ) wire is OK. Go to step 4.

NO : Repair an open in the IGP(INJ) wire between the injector and PGM-FI main relay 1, then **do the repair verification** .

4. Determine possible failure area (INJ line short, INJ line open):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check for continuity between body ground and the appropriate injector connector terminal of the problem cylinder (see table).

     Test condition IG LOCK (0)

     Injector 2P connector (problem cylinder): disconnected

     Test circuit INJ

Is there continuity?

YES : The INJ wire is OK. **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

NO : Repair an open in the INJ wire between the PCM and the injector, then **do the repair verification** .

REPAIR VERIFICATION

- 1. Turn the ignition switch to LOCK (0).
- 2. Reconnect all connectors.
- 3. Turn the ignition switch to ON (II).
- 4. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 5. **DO THE PCM IDLE LEARN PROCEDURE** .
- 6. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0201 No. 1 CYLINDER INJECTOR CIRCUIT MALFUNCTION			
P0202 No. 2 CYLINDER INJECTOR CIRCUIT MALFUNCTION			
P0203 No. 3 CYLINDER INJECTOR CIRCUIT MALFUNCTION			
P0204 No. 4 CYLINDER INJECTOR CIRCUIT MALFUNCTION			

Is DTC P0201, P0202, P0203, or P0204 indicated?

YES : Check for poor connections or loose terminals at the injector and the PCM. If the PCM was updated, **substitute a known-good PCM** See **PCM UPDATE** or **PCM REMOVAL AND INSTALLATION** , then recheck. If the PCM was substituted, go to step 1.

NO : Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM UPDATE** or **PCM REMOVAL AND INSTALLATION** . If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

DTC P0222: TP SENSOR B CIRCUIT LOW VOLTAGE

GETtheMANUALS.org

DTC Troubleshooting: P0222

GETtheMANUALS.org

Fig. 91: DTC Troubleshooting Flow Chart (P0222)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0222 TP SENSOR B CIRCUIT LOW VOLTAGE			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 3. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
TP SENSOR B	Less than 0.3 V			

Do the current condition(s) match the threshold?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the throttle body and the PCM.

2. Determine possible failure area (TH 2 line, others):
   - 1. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0122 TP SENSOR A CIRCUIT LOW VOLTAGE			
P0222 TP SENSOR B CIRCUIT LOW VOLTAGE			

Are DTC P0122 and P0222 indicated at the same time?

YES : Go to step 4.

NO : Go to step 3.

GETtheMANUALS.org

3. Shorted wire check (TH 2 line):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Jump the SCS line with the HDS.
    - 3. Disconnect the following connectors.

      PCM connector C (49P)

      Throttle body 6P connector

    - 4. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      PCM connector C (49P): disconnected

      Throttle body 6P connector: disconnected

      Test circuit TH 2

      Test point 1 Throttle body 6P connector No. 4 (RED)

      Test point 2 Body ground

Fig. 92: Checking Continuity Between Throttle Body 6P Connector No. 4 (RED) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short in the TH 2 wire between the PCM (C31) and the throttle body, then **do the repair verification** .

NO : The TH 2 wire is OK. **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

4. Determine possible failure area (throttle body, others):

GETtheMANUALS.org

- 1. Turn the ignition switch to LOCK (0).
- 2. Disconnect the following connector.

  Throttle body 6P connector

- 3. Turn the ignition switch to ON (II).
- 4. Measure the voltage between test points 1 and 2.

  Test condition IG ON (II)

  Throttle body 6P connector: disconnected

  Test circuit VCC3(ETCS)

  Test point 1 Throttle body 6P connector No. 5 (TAN)

  Test point 2 Body ground

Fig. 93: Measuring Voltage Between Throttle Body 6P Connector No. 5 (TAN) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5.0 V?

YES : **Replace the throttle body** See **THROTTLE BODY DISASSEMBLY AND REASSEMBLY** or **THROTTLE BODY REMOVAL AND INSTALLATION** or **THROTTLE BODY CLEANING** , then **do the repair verification** .

NO : Go to step 5.

5. Open wire check (VCC3(ETCS) line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connector.

     PCM connector C (49P)

GETtheMANUALS.org

- 4. Check for continuity between test points 1 and 2.

  Test condition IG LOCK (0)

  Throttle body 6P connector: disconnected

  PCM connector C (49P): disconnected

  Test circuit VCC3(ETCS)

  Test point 1 PCM connector C (49P) No. 22 (TAN)

  Test point 2 Throttle body 6P connector No. 5 (TAN)

Fig. 94: Checking Continuity Between PCM Connector C (49P) No. 22 (TAN) And Throttle Body 6P Connector No. 5 (TAN)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The VCC3 wire is OK. **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

NO : Repair an open in the VCC3(ETCS) wire between the PCM (C22) and the throttle body, then **do the repair verification** .

REPAIR VERIFICATION

- 1. Turn the ignition switch to LOCK (0).

GETtheMANUALS.org

- 2. Reconnect all connectors.
- 3. Turn the ignition switch to ON (II).
- 4. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** or **HOW TO TROUBLESHOOT THE A/T SYSTEM** .

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0222 TP SENSOR B CIRCUIT LOW VOLTAGE			

Is DTC P0222 indicated?

YES : Check for poor connections or loose terminals at the throttle body and the PCM. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then recheck. If the PCM was substituted, go to step 1.

NO : Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

DTC P0223: TP SENSOR B CIRCUIT HIGH VOLTAGE

GETtheMANUALS.org

DTC Troubleshooting: P0223

Fig. 95: DTC Troubleshooting Flow Chart (P0223)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0223 TP SENSOR B CIRCUIT HIGH VOLTAGE			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 3. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
TP SENSOR B	More than 4.8	V		

Do the current condition(s) match the threshold?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the throttle body and the PCM.

2. Determine possible failure area (SG3(ETCS) line, others):
   - 1. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0123 TP SENSOR A CIRCUIT HIGH VOLTAGE			
P0223 TP SENSOR B CIRCUIT HIGH VOLTAGE			

Are DTC P0123 and P0223 indicated at the same time?

YES : Go to step 5.

NO : Go to step 3.

3. Determine possible failure area (throttle body, others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

GETtheMANUALS.org

Throttle body 6P connector

- 3. Turn the ignition switch to ON (II).
- 4. Measure the voltage between test points 1 and 2.

Test condition IG ON (II)

Throttle body 6P connector: disconnected

Test circuit TH 2

Test point 1 Throttle body 6P connector No. 4 (RED)

Test point 2 Body ground

Fig. 96: Measuring Voltage Between Throttle Body 6P Connector No. 4 (RED) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5.0 V?

YES : **Replace the throttle body** See **THROTTLE BODY REMOVAL AND INSTALLATION** , **THROTTLE BODY DISASSEMBLY AND REASSEMBLY** or **THROTTLE BODY CLEANING** , then **do the repair verification** .

NO : Go to step 4.

4. Open wire check (TH 2 line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connector.

     PCM connector C (49P)

   - 4. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

GETtheMANUALS.org

Throttle body 6P connector: disconnected

PCM connector C (49P): disconnected

Test circuit TH 2

Test point 1 PCM connector C (49P) No. 31 (RED)

Test point 2 Throttle body 6P connector No. 4 (RED)

Fig. 97: Checking Continuity Between PCM Connector C (49P) No. 31 (RED) And Throttle Body 6P Connector No. 4 (RED)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The TH 2 wire is OK. **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

NO : Repair an open in the TH 2 wire between the PCM (C31) and the throttle body, then **do the repair verification** .

5. Open wire check (SG3(ETCS) line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connectors.

     PCM connector C (49P)

GETtheMANUALS.org

Throttle body 6P connector

- 4. Check for continuity between test points 1 and 2.

  Test condition IG LOCK (0)

  PCM connector C (49P): disconnected

  Throttle body 6P connector: disconnected

  Test circuit SG3(ETCS)

  Test point 1 PCM connector C (49P) No. 14 (GRY)

  Test point 2 Throttle body 6P connector No. 3 (GRY)

Fig. 98: Checking Continuity Between PCM Connector C (49P) No. 14 (GRY) And Throttle Body 6P Connector No. 3 (GRY)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The SG3(ETCS) wire is OK. **Update the PCM** See **PCM UPDATE** or **PCM REMOVAL AND INSTALLATION** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

NO : Repair an open in the SG3(ETCS) wire between the PCM (C14) and the throttle body, then **do the repair verification** .

REPAIR VERIFICATION

GETtheMANUALS.org

- 1. Turn the ignition switch to LOCK (0).
- 2. Reconnect all connectors.
- 3. Turn the ignition switch to ON (II).
- 4. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 5. **DO THE PCM IDLE LEARN PROCEDURE** .
- 6. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0223 TP SENSOR B CIRCUIT HIGH VOLTAGE			

Is DTC P0223 indicated?

YES : Check for poor connections or loose terminals at the throttle body and the PCM. If the PCM was updated, **substitute a known-good PCM** See **PCM UPDATE** or **PCM REMOVAL AND INSTALLATION** , then recheck. If the PCM was substituted, go to step 1.

NO : Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

DTC P0300: RANDOM MISFIRE DETECTED; DTC P0301: NO. 1 CYLINDER MISFIRE DETECTED; DTC P0302: NO. 2 CYLINDER MISFIRE DETECTED; DTC P0303: NO. 3 CYLINDER MISFIRE DETECTED; DTC P0304: NO. 4 CYLINDER MISFIRE DETECTED

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board**

GETtheMANUALS.org

snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .

- **Do not clear the DTC until the cause of the misfire is fixed. Valuable data required for troubleshooting will be lost if the DTC is cleared. The data will also be lost even if freeze data and the on-board snapshot is saved.**
- **If the misfire is frequent enough to trigger detection of increased emissions during two consecutive driving cycles, the MIL will come on, and DTC P0300 (and some combination of P0301 through P0304) will be stored.**
- **If the misfire is frequent enough to damage the catalyst, the MIL will flash whenever the misfire occurs, and DTC P0300 (and some combination of P0301 through P0304) will be stored. When the misfire stops, the MIL will remain on.**
- **Troubleshoot the following DTCs first, if any of them were stored along with the random misfire DTC(s) (Because parts can sometimes fail without setting DTC's you should also do a physical inspection of the systems listed below):**

  P0102, P0103: MAF sensor

  P0107, P0108: MAP sensor

  P0171, P0172: Fuel system

  P0201, P0202, P0203, P0204: No. 1-No. 4 cylinder injector

  P0335, P0339: CKP sensor

  P0365, P0369: CMP sensor B

  P0351, P0352, P0353, P0354: No. 1 -No. 4 cylinder ignition coil(s)

  P2646, P2647, P2648, P2649: VTEC system

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0300 RANDOM MISFIRE			
P0301 No. 1 CYLINDER MISFIRE DETECTED			
P0302 No. 2 CYLINDER MISFIRE DETECTED			
P0303 No. 3 CYLINDER MISFIRE DETECTED			
P0304 No. 4 CYLINDER MISFIRE DETECTED			

1. Problem verification-Idle
   - 1. Record the FREEZE DATA and the ONBOARD SNAPSHOT with the HDS.

GETtheMANUALS.org

- 2. Start the engine, and let it idle.
- 3. Monitor these parameters in the DATA LIST:
  - CYL1 MISFIRE
  - CYL2 MISFIRE
  - CYL3 MISFIRE
  - CYL4 MISFIRE

Signal	Current conditions	
	Values	Unit
CYL1 MISFIRE		
CYL2 MISFIRE		
CYL3 MISFIRE		
CYL4 MISFIRE		

Are the misfire counts increasing on any cylinder at idle?

YES : The engine is misfiring at idle, go to step 2.

NO : The engine does not misfire at idle, go to step 3.

2. Determine Affected Cylinders
   - 1. Continue to monitor the misfire parameters in the DATA LIST.

Signal	Current conditions	
	Values	Unit
CYL1 MISFIRE		
CYL2 MISFIRE		
CYL3 MISFIRE		
CYL4 MISFIRE		

Are misfire counts generally isolated to a single cylinder?

YES : The misfire is isolated to a single cylinder.

- If the misfire counts are increasing every engine revolution (completely inactive cylinder), start the Single Cylinder Continuous Misfire at Idle troubleshooting on step 6.
- If the misfire counts are increasing every few engine revolutions (partially inactive cylinder), start the Single Cylinder Non-Continuous Misfire at Idle troubleshooting on step 21.

NO : The misfire affects multiple cylinders.

- If the misfire counts are increasing every engine revolution (completely inactive cylinder), start the Multiple Cylinder Continuous Misfire at Idle troubleshooting on step 30.

GETtheMANUALS.org

- If the misfire counts are increasing every few engine revolutions (partially inactive cylinder), start the Multiple Cylinder Non-Continuous Misfire at Idle troubleshooting on step 48.

3. Problem verification-Static Load
   - 1. Increase the engine speed to 3, 500 RPM.
   - 2. Hold the engine speed steady, and monitor the misfire parameters in the DATA LIST.

Signal	Current conditions	
	Values	Unit
CYL1 MISFIRE		
CYL2 MISFIRE		
CYL3 MISFIRE		
CYL4 MISFIRE		

Are the misfire counts increasing on any cylinder?

YES : The engine is misfiring under load. Go to step 4.

NO : The engine does not misfire under a static load. Go to step 5.

4. Determine Affected Cylinders
   - 1. Continue to monitor the misfire parameters in the DATA LIST.

Signal	Current conditions	
	Values	Unit
CYL1 MISFIRE		
CYL2 MISFIRE		
CYL3 MISFIRE		
CYL4 MISFIRE		

Are misfire counts generally isolated to a single cylinder?

YES : The misfire is isolated to a single cylinder, start the Single Cylinder Misfire. Under Load troubleshooting on step 58.

NO : The misfire affects multiple cylinders, start the Multiple Cylinder Misfire. Under Load troubleshooting on step 65.

5. Problem verification -- OBD Snapshot
   - 1. Open the ONBOARD SNAPSHOT with the HDS.
   - 2. Scroll through the snapshot, and find when the MISFIRE value begins to increase.
   - 3. Record the value of these parameters as the MISFIRE value increases:

Signal	Value	Units

GETtheMANUALS.org

ECT SENSOR 1		°F
ENGINE SPEED		RPM
VEHICLE SPEED		MPH
MAP SENSOR		V
TP SENSOR		V

- 4. Drive the vehicle according to the conditions you identified above while monitoring the misfire counts.

Signal	Current conditions	
	Values	Unit
CYL1 MISFIRE		
CYL2 MISFIRE		
CYL3 MISFIRE		
CYL4 MISFIRE		

Are the misfire counts increasing on any cylinder?

YES : The engine is misfiring under the specific operating conditions above.

- If the misfire occurred when the engine was cold, start the Misfire When Cold troubleshooting on step 72.
- If the misfire occurred when the engine was loaded, go to step 4.

NO : Intermittent failure; the engine is not misfiring at this time.

NOTE: **If the misfire can not be reproduced, there is a possibility that the problem may have been caused by poor quality fuel. The problem may have disappeared after refueling with fresh fuel. The MIL DIST (MIL Distance) value in the Data List in combination with the fuel level may help you make this determination.**

6. Check Ignition Coil Spark
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Remove the ignition coil from the problem cylinder.
   - 3. Connect a commercially available spark tester between the ignition coil and engine ground.
   - 4. Start the engine with the ignition coil connected.

Does the ignition coil produce a spark?

YES : The ignition coil wiring is OK. Go to step 14.

NO : There is a problem with the ignition coil, or the Ignition coil circuit. Go to step 7.

GETtheMANUALS.org

7. Ignition Coil Check
    - 1. Exchange the ignition coil on the problem cylinder with a normally operating cylinder.
    - 2. Connect a commercially available spark tester between the ignition coil and engine ground.
    - 3. Start the engine with the ignition coil connected.

    Does the ignition coil produce a spark?

    YES : The ignition coil has a failure. REPLACE THE IGNITION COIL , and then **do the repair verification** .

    NO : There is a problem with the ignition coil circuit. Go to step 8.

8. Check Ignition Coil Power and Ground
    - 1. Disconnect the ignition coil 3P connector from the problem cylinder.
    - 2. Turn the ignition switch to ON (II).
    - 3. Measure the voltage between ignition coil 3P connector terminals No. 1 (power) and No. 2 (ground).

    NOTE: **After the ignition switch is turned to LOCK (0), this circuit may still show battery voltage for a period of time. This is normal.**

GETtheMANUALS.org

Fig. 108: Measuring Voltage Between Ignition Coil 3P Connector Terminals No. 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The ignition coil power and ground circuits are OK. Go to step 9.

NO : There is a problem with the ignition coil power or ground circuit. Go to step 13.

9. Check Ignition Coil Control Short to Power
   - 1. Turn the ignition switch to ON (II).
   - 2. Measure the voltage between ignition coil 3P connector terminals No. 3 (Ignition Control) and body ground.

GETtheMANUALS.org

Fig. 109: Measuring Voltage Between Ignition Coil 3P Connector Terminals No. 3 (Ignition Control) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 4 V or more?

YES : The ignition coil control circuit is shorted to power. Go to step 10.

NO : The ignition coil control circuit is not shorted to power. Go to step 11.

10. Isolate Ignition Coil Control Short to Power
    - 1. Jump the SCS line with the HDS.
    - 2. Turn the ignition switch to LOCK (0).
    - 3. Disconnect the PCM connectors.
    - 4. Turn the ignition switch to ON (II).
    - 5. Measure the voltage between ignition coil 3P connector terminals No. 3 (Ignition Control) and body ground.

GETtheMANUALS.org

Fig. 110: Measuring Voltage Between Ignition Coil 3P Connector Terminals No. 3 (Ignition Control) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 4 V or more?

YES : There is a short to power on the ignition coil control circuit. Find and repair the failure, and then **do the repair verification** .

NO : The PCM is malfunctioning. **Replace the PCM** See **PCM UPDATE** or **PCM REMOVAL AND INSTALLATION** , and then **do the repair verification** .

11. Check Ignition Coil Control Open Circuit
    - 1. Jump the SCS line with the HDS.
    - 2. Turn the ignition switch to LOCK (0).
    - 3. Disconnect the PCM connectors.
    - 4. Check for continuity between the ignition coil control terminal at the PCM connector and at the ignition coil 3P connector terminal No. 3.

GETtheMANUALS.org

Fig. 111: Checking Continuity Between Ignition Coil Control Terminal PCM Connector And Ignition Coil 3P Connector Terminal No. 3
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The ignition coil control circuit is not open. Go to step 12.

NO : Repair the open circuit between the ignition coil and the PCM, and then **do the repair verification** .

12. Check Ignition Coil Control Short to Ground
    - 1. Check for continuity between the ignition coil control terminal at the ignition coil 3P connector terminal No. 3 and body ground.

GETtheMANUALS.org

Fig. 112: Checking Continuity Between Ignition Coil Control Terminal At Ignition Coil 3P Connector Terminal No. 3 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair the short to ground on the ignition coil control wire, and then **do the repair verification** .

NO : The ignition coil control wiring is OK. **Substitute a known good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , and then **do the repair verification** .

13. Check Ignition Coil Power Circuit
    - 1. Measure the voltage between ignition coil 3P connector terminal No. 1 (power) and a known-good engine ground.

GETtheMANUALS.org

Fig. 113: Measuring Voltage Between Ignition Coil 3P Connector Terminal No. 1 (Power) And Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage between the ignition coil power terminal and engine ground?

YES : The power circuit is OK. Repair the open circuit between the ignition coil (3P connector terminal No. 2) and G102, and then **do the repair verification** .

NO : Repair the open circuit between the ignition coil and the ignition coil relay, and then **do the repair verification** .

14. Inspect Ignition Coil
    - 1. Inspect the ignition coil and spark plug tube for engine oil contamination.

Is the ignition coil covered in engine oil?

YES : Clean the oil from the ignition coil and spark plug tube. REPLACE THE SPARK PLUG TUBE SEALS IN THE CYLINDER HEAD COVER , and then **do the repair verification** .

GETtheMANUALS.org

NO : Go to step 15.

15. Exchange Spark Plug and Ignition Coil
    - 1. Exchange the spark plug and the ignition coil with one from a normally operating cylinder.
    - 2. Drive the vehicle under the conditions when the misfire was duplicated.
    - 3. Monitor these parameters in the DATA LIST:
        - CYL1 MISFIRE
        - CYL2 MISFIRE
        - CYL3 MISFIRE
        - CYL4 MISFIRE

Signal	Current conditions	
	Values	Unit
CYL1 MISFIRE		
CYL2 MISFIRE		
CYL3 MISFIRE		
CYL4 MISFIRE		

Did the misfire counts stay at the problem cylinder?

YES : The ignition coil and spark plug are OK. Go to step 17.

NO : There is a failure in the ignition coil or the spark plug. Go to step 16.

16. Exchange Ignition Coil
    - 1. Exchange the ignition coil on the problem cylinder with a normally operating cylinder.
    - 2. Drive the vehicle under the conditions when the misfire was duplicated.
    - 3. Monitor these parameters in the DATA LIST:
        - CYL1 MISFIRE
        - CYL2 MISFIRE
        - CYL3 MISFIRE
        - CYL4 MISFIRE

Signal	Current conditions	
	Values	Unit
CYL1 MISFIRE		
CYL2 MISFIRE		
CYL3 MISFIRE		
CYL4 MISFIRE		

Did the misfire counts stay at the problem cylinder?

GETtheMANUALS.org

YES : The spark plug has a failure. REPLACE THE SPARK PLUG , and then **do the repair verification** .

NO : The ignition coil has a failure. REPLACE THE IGNITION COIL , and then **do the repair verification** .

17. Check Cylinder Leakage
    - 1. PERFORM A CYLINDER LEAKAGE TEST .
    - 2. Record your test results in the chart shown below.

Fig. 114: Identifying Cylinder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

	Leakage %	Leakage Area
No. 1	%	
No. 2	%	
No. 3	%	
No. 4	%	

Does any cylinder have leakage greater than 10%?

YES : If the majority of the air is escaping from exhaust pipe or throttle body, check for tight valve clearance and adjust each cylinder as needed, then retest. Determine the cause of the cylinder leakage and repair the engine as needed, and then **do the repair verification** .

NO : The cylinders are sealing properly. Go to step 18.

18. Check Cylinder Compression
    - 1. PERFORM A CYLINDER COMPRESSION TEST .
    - 2. Record your test results in a chart similar to the one shown below.

Fig. 115: Identifying Cylinder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

	Compression
No. 1	PSI
No. 2	PSI
No. 3	PSI
No. 4	PSI

Highest Reading	Lowest Reading	Variation
PSI	PSI	%

Does the compression vary more than 10% between cylinders, or does any cylinder read below 150 PSI?

YES : The cylinder leakage is normal, but the engine compression is low. Check for each of the conditions below and repair as needed, and then **do the repair verification** .

- Incorrect camshaft timing.
- A bent (short) connecting rod.
- Worn or damaged camshaft lobes.

NO : The engine compression and cylinder leakage is normal. Go to step 19.

19. Exchange Fuel Injector
    - 1. Exchange the fuel injector from the problem cylinder with one from another cylinder.
    - 2. Drive the vehicle under the conditions when the misfire was duplicated.
    - 3. Monitor these parameters in the DATA LIST:
        - CYL1 MISFIRE
        - CYL2 MISFIRE
        - CYL3 MISFIRE
        - CYL4 MISFIRE

Signal	Current conditions	
	Values	Unit
CYL1 MISFIRE		
CYL2 MISFIRE		
CYL3 MISFIRE		
CYL4 MISFIRE		

Do the misfire counts stay at the problem cylinder when the fuel injector is swapped?

YES : The fuel injector is OK. Go to step 20.

NO : The fuel injector is faulty. REPLACE THE FAULTY FUEL INJECTOR , and then **do the repair verification** .

GETtheMANUALS.org

20. CKP Pattern Clear/Pattern Learn
    - 1. Select CRANK PATTERN in the ADJUSTMENT MENU with the HDS.
    - 2. Select CRANK PATTERN CLEAR, and clear the CKP pattern.
    - 3. Select CRANK PATTERN LEARNING with the HDS, and follow the screen prompts.
    - 4. Drive the vehicle under the conditions when the misfire was duplicated.
    - 5. Monitor these parameters in the DATA LIST:
        - CYL1 MISFIRE
        - CYL2 MISFIRE
        - CYL3 MISFIRE
        - CYL4 MISFIRE

Signal	Current conditions	
	Values	Unit
CYL1 MISFIRE		
CYL2 MISFIRE		
CYL3 MISFIRE		
CYL4 MISFIRE		

Did the misfire counts stay at the problem cylinder?

YES : **Update the PCM with the latest software** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , and then **do the repair verification** .

NO : **Perform the repair confirmation** .

21. Inspect Spark Plug
    - 1. Remove the spark plug from the problem cylinder.
    - 2. Inspect the spark plug for signs of failure. Also make sure the spark plugs are the correct part number for the vehicle.

Does the spark plug show any signs of failure or is it not the correct part number?

YES : REPLACE THE SPARK PLUG , and then **do the repair verification** .

NO : Go to step 22.

22. Inspect Ignition Coil
    - 1. Inspect the ignition coil and spark plug tube for engine oil contamination.

Is the ignition coil covered in engine oil?

YES : Clean the oil from the ignition coil and spark plug tube. REPLACE THE SPARK PLUG TUBE

GETtheMANUALS.org

SEALS IN THE CYLINDER HEAD cover, and then **do the repair verification** .

NO : Go to step 23.

23. Exchange Spark Plug and Ignition Coil
    - 1. Exchange the spark plug and the ignition coil with normally operating cylinder.
    - 2. Drive the vehicle under the conditions when the misfire was duplicated.
    - 3. Monitor these parameters in the DATA LIST:
        - CYL1 MISFIRE
        - CYL2 MISFIRE
        - CYL3 MISFIRE
        - CYL4 MISFIRE

Signal	Current conditions	
	Values	Unit
CYL1 MISFIRE		
CYL2 MISFIRE		
CYL3 MISFIRE		
CYL4 MISFIRE		

Did the misfire counts stay at the problem cylinder?

YES : The ignition coil and spark plug are OK. Go to step 25.

NO : There is a failure in the ignition coil or the spark plug. Go to step 24.

24. Exchange Ignition Coil
    - 1. Exchange the ignition coil on the problem cylinder with a normally operating cylinder.
    - 2. Drive the vehicle under the conditions when the misfire was duplicated.
    - 3. Monitor these parameters in the DATA LIST:
        - CYL1 MISFIRE
        - CYL2 MISFIRE
        - CYL3 MISFIRE
        - CYL4 MISFIRE

Signal	Current conditions	
	Values	Unit
CYL1 MISFIRE		
CYL2 MISFIRE		
CYL3 MISFIRE		
CYL4 MISFIRE		

GETtheMANUALS.org

Did the misfire counts stay at the problem cylinder?

YES : The spark plug has a failure. REPLACE THE SPARK PLUG , and then **do the repair verification** .

NO : The ignition coil has a failure. REPLACE THE IGNITION COIL , and then **do the repair verification** .

25. Check MAP Sensor Fluctuation
    - 1. Start the engine, and let it idle until the cooling fans cycle twice.
    - 2. Turn off all engine and electrical loads (AC, radio, lights, etc.).
    - 3. Configure a HIGH-SPEED SNAPSHOT, and select only the MAP SENSOR.
    - 4. Begin displaying live vehicle data on a line graph.
    - 5. Configure the MAP SENSOR line graph range for 1.2 V MAX and 0.8 V MIN.
    - 6. Watch the MAP SENSOR fluctuation. See examples below.

Fig. 116: MAP Sensor Proper Signal Waveform
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

Fig. 117: MAP Sensor Improper Signal Waveform
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Does the MAP SENSOR continuously fluctuate 0.04 V or more at idle, no loads, engine hot?

YES : The intake manifold pressure fluctuation indicates a mechanical engine failure. Go to step 26.

NO : The intake manifold vacuum fluctuation is OK. Go to step 29.

26. Adjust Valve Clearance
    - 1. **Adjust the valve clearances** See VALVE CLEARANCE ADJUSTMENT or VALVE, SPRING, AND VALVE SEAL REMOVAL AND INSTALLATION , and inspect the camshaft for excessive wear or grooves.

      NOTE: ECT Sensor 1 must read less than 100 ° F (38 ° C) before adjusting the valve clearance. Short cutting this step may cause incorrect valve clearance and engine misfire.

    - 2. Recheck the MAP Sensor fluctuation at idle.

Does the MAP SENSOR continuously fluctuate 0.04 V or more at idle, no loads, engine hot?

YES : Adjusting the valve clearance did not correct the excessive MAP sensor fluctuation. Go to step 27.

NO : The excessive MAP sensor fluctuation was caused by incorrect valve clearance. **Perform the Repair Confirmation** .

27. Check Cylinder Leakage
    - 1. PERFORM A CYLINDER LEAKAGE TEST .
    - 2. Record your test results in the chart shown below.

GETtheMANUALS.org

Fig. 118: Identifying Cylinder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

	Leakage	Leakage Area
No. 1	%	
No. 2	%	
No. 3	%	
No. 4	%	

Does any cylinder have leakage greater than 10 %?

YES : If the majority of the air is escaping from exhaust pipe or throttle body, check for tight valve clearance and adjust each cylinder as needed, then retest. Determine the cause of the cylinder leakage and repair the engine as needed, and then **do the repair verification** .

NO : The cylinders are sealing properly. Go to step 28.

28. Check Cylinder Compression
    - 1. PERFORM A CYLINDER COMPRESSION TEST .
    - 2. Record your test results in a chart similar to the one shown below.

Fig. 119: Identifying Cylinder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

	Compression
No. 1	PSI
No. 2	PSI
No. 3	PSI
No. 4	PSI

Highest Reading	Lowest Reading	Variation
PSI	PSI	%

Does the compression vary more than 10 % between cylinders, or does any cylinder read below 150 PSI?

GETtheMANUALS.org

YES : The cylinder leakage is normal, but the engine compression is low. Check for each of the conditions below and repair as needed, and then **do the repair verification** .

- Incorrect camshaft timing.
- A bent (short) connecting rod.
- Worn or damaged camshaft lobes.

NO : The engine compression and cylinder leakage is normal. Go to step 29.

29. Exchange Fuel Injector
    - 1. Exchange the fuel injector from the problem cylinder with one from another cylinder.
    - 2. Drive the vehicle under the conditions when the misfire was duplicated.
    - 3. Monitor these parameters in the DATA LIST:
        - CYL1 MISFIRE
        - CYL2 MISFIRE
        - CYL3 MISFIRE
        - CYL4 MISFIRE

Signal	Current conditions	
	Values	Unit
CYL1 MISFIRE		
CYL2 MISFIRE		
CYL3 MISFIRE		
CYL4 MISFIRE		

Do the misfire counts stay at the problem cylinder when the fuel injector is swapped?

YES : The fuel injector is OK. All of the failures have been checked for this type of misfire. Go to step 1 in the Problem verification procedure and ensure you selected the correct troubleshooting procedure.

NO : The fuel injector is faulty. REPLACE THE FAULTY FUEL INJECTOR , and then **do the repair verification** .

30. Inspect Spark Plug
    - 1. Remove the spark plug from the problem cylinder.
    - 2. Inspect the spark plug for signs of failure. Also make sure the spark plugs are the correct part number for the vehicle.

Does the spark plug show any signs of failure or is it not the correct part number?

YES : REPLACE THE SPARK PLUG , and then **do the repair verification** .

NO : Go to step 31.

GETtheMANUALS.org

31. Check Ignition Coil Spark
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Remove the ignition coil from the problem cylinder.
    - 3. Connect a commercially available spark tester between the ignition coil and engine ground.
    - 4. Start the engine with the ignition coil connected.

    Does the ignition coil produce a spark?

    YES : The ignition coil wiring is OK. Go to step 39.

    NO : There is a problem with the ignition coil wiring. Go to step 32.

32. Exchange Ignition Coil
    - 1. Exchange the ignition coil on the problem cylinder with a normally operating cylinder.
    - 2. Connect a commercially available spark tester between the ignition coil and engine ground.
    - 3. Start the engine with the ignition coil connected.

    Does the ignition coil produce a spark?

    YES : The ignition coil has a failure. REPLACE THE IGNITION COIL , and then **do the repair verification** .

    NO : There is a problem with the ignition coil circuit. Go to step 33.

33. Check Ignition Coil Power and Ground
    - 1. Disconnect the ignition coil 3P connector from the problem cylinder.
    - 2. Turn the ignition switch to ON (II).
    - 3. Measure the voltage between ignition coil 3P connector terminals No. 1 (power) and No. 3 (ground).

GETtheMANUALS.org

Fig. 120: Measuring Voltage Between Ignition Coil 3P Connector Terminals No. 1 (Power) And No. 3 (Ground)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The ignition coil power and ground circuits are OK. Go to step 34.

NO : There is a problem with the ignition coil power or ground circuit. Go to step 38.

34. Check Ignition Coil Control Short to Power
    - 1. Turn the ignition switch to ON (II).
    - 2. Measure the voltage between ignition coil 3P connector terminals No. 3 (Ignition Control) and body ground.

GETtheMANUALS.org

Fig. 121: Measuring Voltage Between Ignition Coil 3P Connector Terminals No. 3 (Ignition Control) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 4 V or more?

YES : The ignition coil control circuit is shorted to power. Go to step 35.

NO : The ignition coil control circuit is not shorted to power. Go to step 36.

35. Isolate Ignition Coil Control Short to Power
    - 1. Jump the SCS line with the HDS.
    - 2. Turn the ignition switch to LOCK (0).
    - 3. Disconnect the PCM connectors.
    - 4. Turn the ignition switch to ON (II).
    - 5. Measure the voltage between ignition coil 3P connector terminals No. 3 (Ignition Control) and body ground.

GETtheMANUALS.org

Fig. 122: Measuring Voltage Between Ignition Coil 3P Connector Terminals No. 3 (Ignition Control) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 4 V or more?

YES : There is a short to power on the ignition coil control circuit. Find and repair the failure, and then **do the repair verification** .

NO : The PCM is malfunctioning. **Replace the PCM** See **PCM UPDATE** or **PCM REMOVAL AND INSTALLATION** , and then **do the repair verification** .

36. Check Ignition Coil Control Open Circuit
    - 1. Jump the SCS line with the HDS.
    - 2. Turn the ignition switch to LOCK (0).
    - 3. Disconnect the PCM connectors.
    - 4. Check for continuity between the ignition coil control terminal at the PCM connector and at the ignition coil 3P connector terminal No. 3.

GETtheMANUALS.org

Fig. 123: Checking Continuity Between Ignition Coil Control Terminal PCM Connector And Ignition Coil 3P Connector Terminal No. 3
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The ignition coil control circuit is not open. Go to step 37.

NO : Repair the open circuit between the ignition coil and the PCM, and then **do the repair verification** .

37. Check Ignition Coil Control Short to Ground
    - 1. Check for continuity between the ignition coil control terminal at the ignition coil 3P connector terminal No. 3 and body ground.

GETtheMANUALS.org

Fig. 124: Checking Continuity Between Ignition Coil Control Terminal Ignition Coil 3P Connector Terminal No. 3 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair the short to ground on the ignition coil control wire, and then **do the repair verification** .

NO : The ignition coil control wiring is OK. **Substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , and then **do the repair verification** .

38. Check Ignition Coil Power Circuit
    - 1. Measure the voltage between ignition coil 3P connector terminal No. 1 (power) and a known-good engine ground.

GETtheMANUALS.org

Fig. 125: Measuring Voltage Between Ignition Coil 3P Connector Terminal No. 1 (Power) And Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage between the ignition coil power terminal and engine ground?

YES : The power circuit is OK. Repair the open circuit between the ignition coil (3P connector terminal No. 2) and G102, and then **do the repair verification** .

NO : Repair the open circuit between the ignition coil and the ignition coil relay, and then **do the repair verification** .

39. Inspect Ignition Coil
    - 1. Inspect the ignition coil and spark plug tube for engine oil contamination.

Is the ignition coil covered in engine oil?

YES : Clean the oil from the ignition coil and spark plug tube. REPLACE THE SPARK PLUG TUBE SEALS IN THE CYLINDER HEAD COVER , and then **do the repair verification** .

GETtheMANUALS.org

NO : Go to step 40.

40. Exchange Spark Plug and Ignition Coil
    - 1. Exchange the spark plug and the ignition coil with normally operating cylinder.
    - 2. Drive the vehicle under the conditions when the misfire was duplicated.
    - 3. Monitor these parameters in the DATA LIST:
        - CYL1 MISFIRE
        - CYL2 MISFIRE
        - CYL3 MISFIRE
        - CYL4 MISFIRE

Signal	Current conditions	
	Values	Unit
CYL1 MISFIRE		
CYL2 MISFIRE		
CYL3 MISFIRE		
CYL4 MISFIRE		

Did the misfire counts stay at the problem cylinder?

YES : The ignition coil and spark plug are OK. Go to step 42.

NO : There is a failure in the ignition coil or the spark plug. Go to step 41.

41. Exchange Ignition Coil
    - 1. Exchange the ignition coil on the problem cylinder with a normally operating cylinder.
    - 2. Drive the vehicle under the conditions when the misfire was duplicated.
    - 3. Monitor these parameters in the DATA LIST:
        - CYL1 MISFIRE
        - CYL2 MISFIRE
        - CYL3 MISFIRE
        - CYL4 MISFIRE

Signal	Current conditions	
	Values	Unit
CYL1 MISFIRE		
CYL2 MISFIRE		
CYL3 MISFIRE		
CYL4 MISFIRE		

Did the misfire counts stay at the problem cylinder?

GETtheMANUALS.org

YES : The spark plug has a failure. REPLACE THE SPARK PLUG , and then **do the repair verification** .

NO : The ignition coil has a failure. REPLACE THE IGNITION COIL , and then **do the repair verification** .

42. Check MAP Sensor Fluctuation
    - 1. Start the engine, and let it idle until the cooling fans cycle twice.
    - 2. Turn off all engine and electrical loads (AC, radio, lights, etc.).
    - 3. Configure a HIGH-SPEED SNAPSHOT, and select only the MAP SENSOR.
    - 4. Begin displaying live vehicle data on a line graph.
    - 5. Configure the MAP SENSOR line graph range for 1.2 V MAX and 0.8 V MIN.
    - 6. Watch the MAP SENSOR fluctuation. See examples below.

Fig. 126: MAP Sensor Proper Signal Waveform
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

Fig. 127: MAP Sensor Improper Signal Waveform
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Does the MAP SENSOR continuously fluctuate 0.04 V or more at idle, no loads, engine hot?

YES : The intake manifold pressure fluctuation indicates a mechanical engine failure. Go to step 43.

NO : The intake manifold vacuum fluctuation is OK. Go to step 46.

43. Adjust Valve Clearance
    - 1. **Adjust the valve clearances** See VALVE CLEARANCE ADJUSTMENT or VALVE, SPRING, AND VALVE SEAL REMOVAL AND INSTALLATION , and inspect the camshaft for excessive wear or grooves.

      NOTE: ECT Sensor 1 must read less than 100 °F (38 ° C) before adjusting the valve clearance. Short cutting this step may cause incorrect valve clearance and engine misfire.

    - 2. Recheck the MAP Sensor fluctuation at idle.

Does the MAP SENSOR continuously fluctuate 0.04 V or more at idle, no loads, engine hot?

YES : Adjusting the valve clearance did not correct the excessive MAP sensor fluctuation. Go to step 44.

NO : The excessive MAP sensor fluctuation was caused by incorrect valve clearance. **Perform the Repair Confirmation** .

44. Check Cylinder Leakage
    - 1. PERFORM A CYLINDER LEAKAGE TEST .
    - 2. Record your test results in the chart shown below.

GETtheMANUALS.org

Fig. 128: Identifying Cylinder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

	Leakage %	Leakage Area
No. 1	%	
No. 2	%	
No. 3	%	
No. 4	%	

Does any cylinder have leakage greater than 10 %?

YES : If the majority of the air is escaping from exhaust pipe or throttle body, check for tight valve clearance and adjust each cylinder as needed, then retest. Determine the cause of the cylinder leakage and repair the engine as needed, and then **do the repair verification** .

NO : The cylinders are sealing properly. Go to step 45.

45. Check Cylinder Compression
    - 1. PERFORM A CYLINDER COMPRESSION TEST .
    - 2. Record your test results in a chart similar to the one shown below.

Fig. 129: Identifying Cylinder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

	Compression
No. 1	PSI
No. 2	PSI
No. 3	PSI
No. 4	PSI

Highest Reading	Lowest Reading	Variation
PSI	PSI	%

Does the compression vary more than 10 % between cylinders, or does any cylinder read below 150 PSI?

GETtheMANUALS.org

YES : The cylinder leakage is normal, but the engine compression is low. Check for each of the conditions below and repair as needed, and then **do the repair verification** .

- Incorrect camshaft timing.
- A bent (short) connecting rod.
- Worn or damaged camshaft lobes.

NO : The engine compression and cylinder leakage is normal. Go to step 46.

46. Exchange Fuel Injector
    - 1. Exchange the fuel injector from the problem cylinder with one from another cylinder.
    - 2. Drive the vehicle under the conditions when the misfire was duplicated.
    - 3. Monitor these parameters in the DATA LIST:
        - CYL1 MISFIRE
        - CYL2 MISFIRE
        - CYL3 MISFIRE
        - CYL4 MISFIRE

Signal	Current conditions	
	Values	Unit
CYL1 MISFIRE		
CYL2 MISFIRE		
CYL3 MISFIRE		
CYL4 MISFIRE		

Do the misfire counts stay at the problem cylinder when the fuel injector is swapped?

YES : The fuel injector is OK. Go to step 47.

NO : The fuel injector is faulty. REPLACE THE FAULTY FUEL INJECTOR , and then **do the repair verification** .

47. CKP Pattern Clear/Pattern Learn
    - 1. Select CRANK PATTERN in the ADJUSTMENT MENU with the HDS.
    - 2. Select CRANK PATTERN CLEAR, and clear the CKP pattern.
    - 3. Select CRANK PATTERN LEARNING with the HDS, and follow the screen prompts.
    - 4. Drive the vehicle under the conditions when the misfire was duplicated.
    - 5. Monitor these parameters in the DATA LIST:
        - CYL1 MISFIRE
        - CYL2 MISFIRE
        - CYL3 MISFIRE
        - CYL4 MISFIRE

GETtheMANUALS.org

Signal	Current conditions	
	Values	Unit
CYL1 MISFIRE		
CYL2 MISFIRE		
CYL3 MISFIRE		
CYL4 MISFIRE		

Did the misfire counts stay at the problem cylinder?

YES : **Update the PCM with the latest software** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , and then **do the repair verification** .

NO : **Perform the Repair Confirmation** .

48. Inspect Spark Plug
    - 1. Remove the spark plug from the problem cylinder.
    - 2. Inspect the spark plug for signs of failure. Also make sure the spark plugs are the correct part number for the vehicle.

Does the spark plug show any signs of failure or is it not the correct part number?

YES : REPLACE THE SPARK PLUG , and then **do the repair verification** .

NO : Go to step 49.

49. Check MAP Sensor Fluctuation
    - 1. Start the engine, and let it idle until the cooling fans cycle twice.
    - 2. Turn off all engine and electrical loads (AC, radio, lights, etc.).
    - 3. Configure a HIGH-SPEED SNAPSHOT, and select only the MAP SENSOR.
    - 4. Begin displaying live vehicle data on a line graph.
    - 5. Configure the MAP SENSOR line graph range for 1.2 V MAX and 0.8 V MIN.
    - 6. Watch the MAP SENSOR fluctuation. See examples below.

GETtheMANUALS.org

Fig. 130: MAP Sensor Proper Signal Waveform
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 131: MAP Sensor Improper Signal Waveform
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Does the MAP SENSOR continuously fluctuate 0.04 V or more at idle, no loads, engine hot?

YES : The intake manifold pressure fluctuation indicates a mechanical engine failure. Go to step 50.

NO : The intake manifold vacuum fluctuation is OK. Go to step 53.

50. Adjust Valve Clearance
    - 1. **Adjust the valve clearances** See VALVE CLEARANCE ADJUSTMENT or VALVE, SPRING, AND VALVE SEAL REMOVAL AND INSTALLATION , and inspect the camshaft for excessive wear or grooves.

GETtheMANUALS.org

NOTE: **ECT Sensor 1 must read less than 100 ° F (38 ° C) before adjusting the valve clearance. Short cutting this step may cause incorrect valve clearance and engine misfire.**

- 2. Recheck the MAP Sensor fluctuation at idle.

Does the MAP SENSOR continuously fluctuate 0.04 V or more at idle, no loads, engine hot?

YES : Adjusting the valve clearance did not correct the excessive MAP sensor fluctuation. Go to step 51.

NO : The excessive MAP sensor fluctuation was caused by incorrect valve clearance. **Perform the Repair Confirmation** .

51. Check Cylinder Leakage
    - 1. PERFORM A CYLINDER LEAKAGE TEST .
    - 2. Record your test results in the chart shown below.

Fig. 132: Identifying Cylinder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Does any cylinder have leakage greater than 10 %?

YES : If the majority of the air is escaping from exhaust pipe or throttle body, check for tight valve clearance and adjust each cylinder as needed, then retest. Determine the cause of the cylinder leakage and repair the engine as needed, and then **do the repair verification** .

NO : The cylinders are sealing properly. Go to step 52.

52. Check Cylinder Compression
    - 1. PERFORM A CYLINDER COMPRESSION TEST .
    - 2. Record your test results in a chart similar to the one shown below.

GETtheMANUALS.org

Fig. 133: Identifying Cylinder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

	Compression
No. 1	PSI
No. 2	PSI
No. 3	PSI
No. 4	PSI

Highest Reading	Lowest Reading	Variation
PSI	PSI	%

Does the compression vary more than 10 % between cylinders, or does any cylinder read below 150 PSI?

YES : The cylinder leakage is normal, but the engine compression is low. Check for each of the conditions below and repair as needed, and then **do the repair verification** .

- Incorrect camshaft timing.
- A bent (short) connecting rod.
- Worn or damaged camshaft lobes.

NO : The engine compression and cylinder leakage is normal. Go to step 55.

53. Check Cylinder Leakage
    - 1. PERFORM A CYLINDER LEAKAGE TEST .
    - 2. Record your test results in the chart shown below.

Fig. 134: Identifying Cylinder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

	Leakage %	Leakage Area
No. 1	%	
No. 2	%	

GETtheMANUALS.org

No. 3	%	
No. 4	%	

Does any cylinder have leakage greater than 10%?

YES : If the majority of the air is escaping from exhaust pipe or throttle body, check for tight valve clearance and adjust each cylinder as needed, then retest. Determine the cause of the cylinder leakage and repair the engine as needed, and then **do the repair verification** .

NO : The cylinders are sealing properly. Go to step 54.

54. Check Cylinder Compression
    - 1. PERFORM A CYLINDER COMPRESSION TEST .
    - 2. Record your test results in a chart similar to the one shown below.

Fig. 135: Identifying Cylinder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

	Compression
No. 1	PSI
No. 2	PSI
No. 3	PSI
No. 4	PSI

Highest Reading	Lowest Reading	Variation
PSI	PSI	%

Does the compression vary more than 10 % between cylinders, or does any cylinder read below 150 PSI?

YES : The cylinder leakage is normal, but the engine compression is low. Check for each of the conditions below and repair as needed, and then **do the repair verification** .

- Incorrect camshaft timing.
- A bent (short) connecting rod.
- Worn or damaged camshaft lobes.

NO : The engine compression and cylinder leakage is normal. Go to step 55.

55. Check Fuel Pressure

GETtheMANUALS.org

- 1. RELIEVE THE FUEL PRESSURE .
- 2. ATTACH THE FUEL PRESSURE GAUGE SET AND THE FUEL PRESSURE GAUGE .
- 3. Locate and record the fuel pressure specification for your vehicle.

Minimum Pressure	Maximum Pressure
kPa	kPa

- 4. Start the engine and record the fuel pressure under the conditions the misfire was duplicated.

Fuel Pressure
kPa

Is the fuel pressure within specifications?

YES : The fuel pressure is OK. Go to step 56.

NO : Check for pinched or damaged fuel lines. If OK, **replace the fuel tank unit** See FUEL TANK UNIT REMOVAL AND INSTALLATION , and then **do the repair verification** .

56. Check Fuel Contamination
    - 1. **Remove the fuel tank unit** See FUEL TANK UNIT DISASSEMBLY AND REASSEMBLY or FUEL TANK UNIT REMOVAL AND INSTALLATION .
    - 2. Inspect for evidence of fuel contamination such as diesel fuel, water, rust, or debris.

NOTE: **If the misfire occurred shortly after refueling, the likely cause is poor fuel quality. The MIL DIST (MIL distance) value in the DATA LIST, along with the fuel level, can help you make this determination.**

Incorrect or contaminated fuel typically affects multiple cylinders. But a problem such as water in the fuel can cause a single cylinder misfire that occurs randomly.

Is there evidence of fuel contamination?

YES : Replace the fuel filter and then drain/refill the fuel tank with a known-good fuel. **Perform the Repair Confirmation** .

NO : The fuel system has no signs of fuel contamination. Go to step 57.

57. Check MAF Sensor g/s
    - 1. Locate and record the MAF SENSOR g/s specification for your vehicle. This can be found in troubleshooting procedure for DTC P0171.

Minimum g/s	Maximum g/s	Specified RPM
g/s	g/s	g/s

GETtheMANUALS.org

- 2. Ensure the vehicle meets these conditions:
  - Engine coolant temperature (ECT SENSOR 1) above 176 °F (80 °C)
  - Transmission in P or N
  - All electrical loads off

Signal	Current conditions	
	Values	Unit
ECT SENSOR 1		

- 3. Monitor the ENGINE SPEED in the DATA LIST with the HDS. Raise and hold the engine speed steady at the specified rpm.

Signal	Current conditions	
	Values	Unit
ENGINE SPEED		

- 4. While holding the rpm steady, check the MAF SENSOR in the DATA LIST.

Signal	Current conditions	
	Values	Unit
MAF SENSOR		

Is the MAF Sensor g/s value within specifications?

YES : The MAF sensor is reading correctly. REPLACE THE FUEL INJECTORS , and then **do the repair verification** .

NO : The MAF sensor is not reading correctly. **REPLACE THE MAF SENSOR/IAT SENSOR** , and then **do the repair verification** .

58. Inspect Spark Plug
    - 1. Remove the spark plug from the problem cylinder.
    - 2. Inspect the spark plug for signs of failure. Also make sure the spark plugs are the correct part number for the vehicle.

Does the spark plug show any signs of failure or is it not the correct part number?

YES : REPLACE THE SPARK PLUG , and then **do the repair verification** .

NO : Go to step 59.

59. Inspect Ignition Coil
    - 1. Inspect the ignition coil and spark plug tube for engine oil contamination.

GETtheMANUALS.org

Is the ignition coil covered in engine oil?

YES : Clean the oil from the ignition coil and spark plug tube. REPLACE THE SPARK PLUG TUBE SEALS IN THE CYLINDER HEAD COVER , and then **do the repair verification** .

NO : Go to step 60.

60. Exchange Spark Plug and Ignition Coil
    - 1. Exchange the spark plug and the ignition coil with normally operating cylinder.
    - 2. Drive the vehicle under the conditions when the misfire was duplicated.
    - 3. Monitor these parameters in the DATA LIST:
        - CYL1 MISFIRE
        - CYL2 MISFIRE
        - CYL3 MISFIRE
        - CYL4 MISFIRE

Signal	Current conditions	
	Values	Unit
CYL1 MISFIRE		
CYL2 MISFIRE		
CYL3 MISFIRE		
CYL4 MISFIRE		

Did the misfire counts stay at the problem cylinder?

YES : The ignition coil and spark plug are OK. Go to step 62.

NO : There is a failure in the ignition coil or the spark plug. Go to step 61.

61. Exchange Ignition Coil
    - 1. Exchange the ignition coil on the problem cylinder with a normally operating cylinder.
    - 2. Drive the vehicle under the conditions when the misfire was duplicated.
    - 3. Monitor these parameters in the DATA LIST:
        - CYL1 MISFIRE
        - CYL2 MISFIRE
        - CYL3 MISFIRE
        - CYL4 MISFIRE

Do the misfire counts stay at the problem cylinder when the fuel injector is swapped?

YES : The fuel injector is OK. Go to step 63.

NO : The fuel injector is faulty. REPLACE THE FAULTY FUEL INJECTOR , and then **do the repair verification** .

63. Inspect VTEC System
    - 1. PERFORM THE VTEC ROCKER ARM TEST .

Does the engine pass the VTEC rocker arm test?

YES : Go to step 64.

NO : Repair the VTEC system, and then **do the repair verification** .

64. CKP Pattern Clear/Pattern Learn

GETtheMANUALS.org

- 1. Select CRANK PATTERN in the ADJUSTMENT MENU with the HDS.
- 2. Select CRANK PATTERN CLEAR, and clear the CKP pattern.
- 3. Select CRANK PATTERN LEARNING with the HDS, and follow the screen prompts.
- 4. Drive the vehicle under the conditions when the misfire was duplicated.
- 5. Monitor these parameters in the DATA LIST:
  - CYL1 MISFIRE
  - CYL2 MISFIRE
  - CYL3 MISFIRE
  - CYL4 MISFIRE

Signal	Current conditions	
	Values	Unit
CYL1 MISFIRE		
CYL2 MISFIRE		
CYL3 MISFIRE		
CYL4 MISFIRE		

Did the misfire counts stay at the problem cylinder?

YES : **Update the PCM with the latest software** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , and then **do the repair verification** .

NO : **Perform the Repair Confirmation** .

65. Inspect Spark Plug
    - 1. Remove the spark plug from the problem cylinder.
    - 2. Inspect the spark plug for signs of failure. Also make sure the spark plugs are the correct part number for the vehicle.

Does the spark plug show any signs of failure or is it not the correct part number?

YES : REPLACE THE SPARK PLUG , and then **do the repair verification** .

NO : Go to step 66.

66. Check Fuel Pressure
    - 1. RELIEVE THE FUEL PRESSURE .
    - 2. ATTACH THE FUEL PRESSURE GAUGE SET AND THE FUEL PRESSURE GAUGE .
    - 3. Locate and record the fuel pressure specification for your vehicle.

Minimum Pressure	Maximum Pressure

GETtheMANUALS.org

kPa	kPa

- 4. Start the engine and record the fuel pressure under the conditions the misfire was duplicated.

Fuel Pressure
kPa

Is the fuel pressure within specifications?

YES : The fuel pressure is OK. Go to step 67.

NO : Check for pinched or damaged fuel lines. If OK, **replace the fuel tank unit** See FUEL TANK UNIT REMOVAL AND INSTALLATION or FUEL TANK UNIT DISASSEMBLY AND REASSEMBLY , and then **do the repair verification** .

67. Check Fuel Contamination
    - 1. **Remove the fuel tank unit** See FUEL TANK UNIT DISASSEMBLY AND REASSEMBLY or FUEL TANK UNIT REMOVAL AND INSTALLATION .
    - 2. Inspect for evidence of fuel contamination such as diesel fuel, water, rust, or debris.

NOTE: **If the misfire occurred shortly after refueling, the likely cause is poor fuel quality. The MIL DIST (MIL distance) value in the DATA LIST, along with the fuel level, can help you make this determination.**

Incorrect or contaminated fuel typically affects multiple cylinders. But a problem such as water in the fuel can cause a single cylinder misfire that occurs randomly.

Is there evidence of fuel contamination?

YES : **Replace the fuel filter** See FUEL TANK UNIT REMOVAL AND INSTALLATION or FUEL TANK UNIT DISASSEMBLY AND REASSEMBLY and then drain/refill the fuel tank with a known-good fuel. **Perform the Repair Confirmation** .

NO : The fuel system has no signs of fuel contamination. Go to step 68.

68. Exchange Fuel Injector
    - 1. Exchange the fuel injector from the problem cylinder with one from another cylinder.
    - 2. Drive the vehicle under the conditions when the misfire was duplicated.
    - 3. Monitor these parameters in the DATA LIST:
        - CYL1 MISFIRE
        - CYL2 MISFIRE
        - CYL3 MISFIRE
        - CYL4 MISFIRE

GETtheMANUALS.org

Signal	Current conditions	
	Values	Unit
CYL1 MISFIRE		
CYL2 MISFIRE		
CYL3 MISFIRE		
CYL4 MISFIRE		

Do the misfire counts stay at the problem cylinder when the fuel injector is swapped?

YES : The fuel injector is OK. Go to step 69.

NO : The fuel injector is faulty. REPLACE THE FAULTY FUEL INJECTOR , and then **do the repair verification** .

69. Inspect VTEC System
    - 1. PERFORM THE VTEC ROCKER ARM TEST .

Does the engine pass the VTEC rocker arm test?

YES : Go to step 70.

NO : Repair the VTEC system, and then **do the repair verification** .

70. Check for Exhaust Restrictions
    - 1. Reinstall all removed parts, and reconnect all connectors.
    - 2. Record the MAP SENSOR value while the engine is off.

Signal	Current conditions	
	Values	Unit
MAP SENSOR		

    - 3. Start the engine and monitor the ENGINE SPEED and MAP SENSOR in the DATA LIST with the HDS.

Signal	Current conditions	
	Values	Unit
MAP SENSOR		
ENGINE SPEED		

    - 4. Raise the engine speed to 3500 rpm and hold the throttle steady.

Does the MAP SENSOR read near atmospheric pressure (engine off value)?

YES : There is a restriction in the exhaust system. Check for catalyst damage and repair as necessary.

GETtheMANUALS.org

Perform the Repair Confirmation .

NO : Go to step 71.

71. CKP Pattern Clear/Pattern Learn
    - 1. Select CRANK PATTERN in the ADJUSTMENT MENU with the HDS.
    - 2. Select CRANK PATTERN CLEAR, and clear the CKP pattern.
    - 3. Select CRANK PATTERN LEARNING with the HDS, and follow the screen prompts.
    - 4. Drive the vehicle under the conditions when the misfire was duplicated.
    - 5. Monitor these parameters in the DATA LIST:
        - CYL1 MISFIRE
        - CYL2 MISFIRE
        - CYL3 MISFIRE
        - CYL4 MISFIRE

Signal	Current conditions	
	Values	Unit
CYL1 MISFIRE		
CYL2 MISFIRE		
CYL3 MISFIRE		
CYL4 MISFIRE		

Did the misfire counts stay at the problem cylinder?

YES : **Update the PCM with the latest software** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** or **SUBSTITUTE A KNOWN-GOOD PCM** , and then **do the repair verification** .

NO : **Perform the Repair Confirmation** .

72. Check MAP Sensor Fluctuation
    - 1. Start the engine, and let it idle until the cooling fans cycle twice.
    - 2. Turn off all engine and electrical loads (AC, radio, lights, etc.).
    - 3. Configure a HIGH-SPEED SNAPSHOT, and select only the MAP SENSOR.
    - 4. Begin displaying live vehicle data on a line graph.
    - 5. Configure the MAP SENSOR line graph range for 1.2 V MAX and 0.8 V MIN.
    - 6. Watch the MAP SENSOR fluctuation. See examples below.

GETtheMANUALS.org

Fig. 136: MAP Sensor Proper Signal Waveform
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 137: MAP Sensor Improper Signal Waveform
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Does the MAP SENSOR continuously fluctuate 0.04 V or more at idle, no loads, engine cold?

YES : The intake manifold pressure fluctuation indicates a mechanical engine failure. Go to step 73.

NO : The intake manifold vacuum fluctuation is OK. Go to step 76.

73. Adjust Valve Clearance
    - 1. **Adjust the valve clearances** See VALVE CLEARANCE ADJUSTMENT or VALVE, SPRING, AND VALVE SEAL REMOVAL AND INSTALLATION , and inspect the camshaft for excessive wear or grooves.

GETtheMANUALS.org

NOTE: **ECT Sensor 1 must read less than 100 °F (38 °C) before adjusting the valve clearance. Short cutting this step may cause incorrect valve clearance and engine misfire.**

- 2. Recheck the MAP Sensor fluctuation at idle.

Does the MAP SENSOR continuously fluctuate 0.04 V or more at idle, no loads, engine cold?

YES : Adjusting the valve clearance did not correct the excessive MAP sensor fluctuation. Go to step 74.

NO : The excessive MAP sensor fluctuation was caused by incorrect valve clearance. **Perform the Repair Confirmation** .

74. Check Cylinder Leakage
    - 1. PERFORM A CYLINDER LEAKAGE TEST .

Does any cylinder have leakage greater than 10 %?

YES : If the majority of the air is escaping from exhaust pipe or throttle body, check for tight valve clearance and adjust each cylinder as needed, then retest. Determine the cause of the cylinder leakage and repair the engine as needed, and then **do the repair verification** .

NO : The cylinders are sealing properly. Go to step 75.

75. Check Cylinder Compression
    - 1. PERFORM A CYLINDER COMPRESSION TEST .
    - 2. Record your test results in a chart similar to the one shown below.

Fig. 138: Identifying Cylinder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

	Compression
No. 1	PSI
No. 2	PSI
No. 3	PSI
No. 4	PSI

Highest Reading	Lowest Reading	Variation
PSI	PSI	%

GETtheMANUALS.org

Does the compression vary more than 10 % between cylinders, or does any cylinder read below 150 PSI?

YES : The cylinder leakage is normal, but the engine compression is low. Check for each of the conditions below and repair as needed, and then **do the repair verification** .

- Incorrect camshaft timing.
- A bent (short) connecting rod.
- Worn or damaged camshaft lobes.

NO : The engine compression and cylinder leakage is normal. Go to step 76.

76. Check Fuel Injector Leak Down
    - 1. CONNECT THE FUEL PRESSURE GAUGE SET .
    - 2. Ensure that the fuel shut off valve is on the fuel pump side of the pressure gauge.

Fig. 139: Checking Fuel Injector Leakage Using Pressure Gauge
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    - 3. Start the engine and then shut it off.
    - 4. Turn the shut off valve 90° to isolate the pressure between the fuel injectors and the fuel pressure gauge.
    - 5. Record the initial fuel pressure reading.
    - 6. Let the vehicle sit for 10 minutes.
    - 7. Check the fuel pressure.

Does the pressure drop more than 10 PSI within 10 minutes?

YES : The fuel injectors are leaking. REPLACE THE FUEL INJECTORS , and then **do the repair verification** .

GETtheMANUALS.org

NO : The fuel injectors are not leaking. Go to step 77.

77. Inspect Spark Plug
    - 1. Remove the spark plug from the problem cylinder.
    - 2. Inspect the spark plug for signs of failure. Also make sure the spark plugs are the correct part number for the vehicle.

Does the spark plug show any signs of failure or is it not the correct part number?

YES : REPLACE THE SPARK PLUG , and then **do the repair verification** .

NO : Go to step 78.

78. Exchange Spark Plug and Ignition Coil
    - 1. Exchange the spark plug and the ignition coil with normally operating cylinder.
    - 2. Drive the vehicle under the conditions when the misfire was duplicated.
    - 3. Monitor these parameters in the DATA LIST:
        - CYL1 MISFIRE
        - CYL2 MISFIRE
        - CYL3 MISFIRE
        - CYL4 MISFIRE

Signal	Current conditions	
	Values	Unit
CYL1 MISFIRE		
CYL2 MISFIRE		
CYL3 MISFIRE		
CYL4 MISFIRE		

Did the misfire counts stay at the problem cylinder?

YES : The ignition coil and spark plug are OK.

- If you have already performed a cylinder leakage and compression test, go to step 82.
- If you have not performed a cylinder leakage and compression test, go to step 80.

NO : There is a failure in the ignition coil or the spark plug. Go to step 79.

79. Exchange Ignition Coil
    - 1. Exchange the ignition coil on the problem cylinder with a normally operating cylinder.
    - 2. Drive the vehicle under the conditions when the misfire was duplicated.
    - 3. Monitor these parameters in the DATA LIST:
        - CYL1 MISFIRE

GETtheMANUALS.org

- CYL2 MISFIRE
- CYL3 MISFIRE
- CYL4 MISFIRE

Signal	Current conditions	
	Values	Unit
CYL1 MISFIRE		
CYL2 MISFIRE		
CYL3 MISFIRE		
CYL4 MISFIRE		

Did the misfire counts stay at the problem cylinder?

YES : The spark plug has a failure. REPLACE THE SPARK PLUG , and then **do the repair verification** .

NO : The ignition coil has a failure. REPLACE THE IGNITION COIL , and then **do the repair verification** .

80. Check Cylinder Leakage
    - 1. PERFORM A CYLINDER LEAKAGE TEST .
    - 2. Record your test results in the chart shown below.

Fig. 140: Identifying Cylinder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

	Leakage %	Leakage Area
No. 1	%	
No. 2	%	
No. 3	%	
No. 4	%	

Does any cylinder have leakage greater than 10 %?

YES : If the majority of the air is escaping from exhaust pipe or throttle body, check for tight valve clearance and adjust each cylinder as needed, then retest. Determine the cause of the cylinder leakage and repair the engine as needed, and then **do the repair verification** .

NO : The cylinders are sealing properly. Go to step 81.

GETtheMANUALS.org

81. Check Cylinder Compression
    - 1. PERFORM A CYLINDER COMPRESSION TEST .
    - 2. Record your test results in a chart similar to the one shown below.

Fig. 141: Identifying Cylinder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

	Compression
No. 1	PSI
No. 2	PSI
No. 3	PSI
No. 4	PSI

Highest Reading	Lowest Reading	Variation
PSI	PSI	%

Does the compression vary more than 10 % between cylinders, or does any cylinder read below 150 PSI?

YES : The cylinder leakage is normal, but the engine compression is low. Check for each of the conditions below and repair as needed, and then **do the repair verification** .

- Incorrect camshaft timing.
- A bent (short) connecting rod.
- Worn or damaged camshaft lobes.

NO : The engine compression and cylinder leakage is normal. Go to step 82.

82. Engine Carbon Removal
    - 1. Perform a top engine cleaning following the product manufacturer's instructions.
    - 2. Drive the vehicle under the conditions when the misfire was duplicated.
    - 3. Monitor these parameters in the DATA LIST:
        - CYL1 MISFIRE
        - CYL2 MISFIRE
        - CYL3 MISFIRE
        - CYL4 MISFIRE

	Current conditions

GETtheMANUALS.org

Signal	Values	Unit
CYL1 MISFIRE		
CYL2 MISFIRE		
CYL3 MISFIRE		
CYL4 MISFIRE		

Did the misfire counts stay?

YES : The carbon removal procedure did not correct the misfire. REPLACE THE FUEL INJECTORS , and then **do the repair verification** .

NO : The carbon removal procedure corrected the misfire. **Perform the Repair Confirmation** .

REPAIR VERIFICATION

- 1. Reinstall all removed parts, and reconnect all connectors.
- 2. Turn the ignition switch to ON (II).
- 3. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 4. **Clear the CKP pattern with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 5. **DO THE PCM IDLE LEARN PROCEDURE** .
- 6. **Do the CKP pattern learn procedure** See **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** or **HOW TO TROUBLESHOOT THE A/T SYSTEM** .
- 7. Drive the vehicle under the conditions that you noticed the misfire while monitoring these parameters in the DATA LIST:
  - CYL1 MISFIRE
  - CYL2 MISFIRE
  - CYL3 MISFIRE
  - CYL4 MISFIRE

Signal	Current conditions	
	Values	Unit
CYL1 MISFIRE		
CYL2 MISFIRE		
CYL3 MISFIRE		
CYL4 MISFIRE		

Do any of the cylinders display misfire counts?

YES : The engine is still misfiring. Go to step 1 in the Problem verification procedure and ensure that you selected the correct troubleshooting procedure.

GETtheMANUALS.org

NO : The misfire problem has been fixed. Clear the DTC.

DTC P0326: KNOCK SENSOR MALFUNCTION

Fig. 142: DTC Troubleshooting Flow Chart (P0326)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0326 KNOCK SENSOR MALFUNCTION			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 3. Turn the ignition switch to LOCK (0).
   - 4. Start the engine. Hold the engine speed at 2, 000 rpm or more without load (in P or N) for at least

GETtheMANUALS.org

5 seconds.

- 5. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0326 KNOCK SENSOR MALFUNCTION			

Is DTC P0326 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the knock sensor and the PCM.

2. Knock sensor installation check:
   - 1. Check the knock sensor installation.

Is the knock sensor installed correctly?

YES : **REPLACE THE KNOCK SENSOR** , then **do the repair verification** .

NO : **INSTALL THE KNOCK SENSOR CORRECTLY** , then **do the repair verification** .

REPAIR VERIFICATION

- 1. Turn the ignition switch to ON (II).
- 2. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 3. **DO THE PCM IDLE LEARN PROCEDURE** .
- 4. Test-drive under these conditions:
  - Engine coolant temperature (ECT SENSOR 1) above 158 °F (70 °C)
  - Transmission in D
  - Engine speed at 1, 500 rpm or more
  - Drive 5 seconds or more

Signal	Current conditions	
	Values	Unit
ECT SENSOR 1		
ENGINE SPEED		

- Check for Pending or Confirmed DTCs with the HDS.

Is DTC P0326 indicated?

YES : Check for poor connections or loose terminals at the knock sensor and the PCM, then go to step 1.

GETtheMANUALS.org

NO : Troubleshooting is complete. If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

DTC P0327: KNOCK SENSOR CIRCUIT LOW VOLTAGE

Fig. 143: DTC Troubleshooting Flow Chart (P0327)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT**

GETtheMANUALS.org

THE FUEL AND EMISSIONS SYSTEMS or HOW TO TROUBLESHOOT THE A/T SYSTEM .

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0327 KNOCK SENSOR CIRCUIT LOW VOLTAGE			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 3. Turn the ignition switch to LOCK (0).
   - 4. Turn the ignition switch to ON (II).
   - 5. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0327 KNOCK SENSOR CIRCUIT LOW VOLTAGE			

Is DTC P0327 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the knock sensor and the PCM.

2. Determine possible failure area (knock sensor, others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Knock sensor 2P connector

   - 3. Turn the ignition switch to ON (II).
   - 4. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0327 KNOCK SENSOR CIRCUIT LOW VOLTAGE			

Is DTC P0328 indicated?

YES : **REPLACE THE KNOCK SENSOR** , then **do the repair verification** .

GETtheMANUALS.org

NO : Go to step 3.

3. Shorted wire check (KS line to KSGND line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connector.

     PCM connector C (49P)

   - 4. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Knock sensor 2P connector: disconnected

     PCM connector C (49P): disconnected

     Test circuit KS, KSGND

     Test point 1 Knock sensor 2P connector No. 1 (BLK)

YES : The KS wires are OK. **Update the PCM** See **PCM UPDATE** or **PCM REMOVAL AND INSTALLATION** if it does not have the latest software, or **substitute a known-good PCM** See **PCM**

GETtheMANUALS.org

REMOVAL AND INSTALLATION or **PCM UPDATE** , then **do the repair verification** .

NO : Repair an open in the KS wire between the PCM (C17) and the knock sensor, then **do the repair verification** .

REPAIR VERIFICATION

- 1. Turn the ignition switch to LOCK (0).
- 2. Reconnect all connectors.
- 3. Turn the ignition switch to ON (II).
- 4. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** or **HOW TO TROUBLESHOOT THE A/T SYSTEM** .
- 5. **DO THE PCM IDLE LEARN PROCEDURE** .
- 6. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0328 KNOCK SENSOR CIRCUIT HIGH VOLTAGE			

Is DTC P0328 indicated?

YES : Check for poor connections or loose terminals at the knock sensor and the PCM. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then recheck. If the PCM was substituted, go to step 1.

NO : Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

DTC P0335: CKP SENSOR NO SIGNAL

GETtheMANUALS.org

DTC Troubleshooting: P0335

Fig. 153: DTC Troubleshooting Flow Chart (P0335)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and**

GETtheMANUALS.org

review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0335 CKP SENSOR NO SIGNAL			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 3. Start the engine.
   - 4. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0335 CKP SENSOR NO SIGNAL			

Is DTC P0335 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the CKP sensor and the PCM.

2. Open wire check (IGP(CRANK)/FI MAIN RLY OUT line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     CKP sensor 3P connector

   - 3. Turn the ignition switch to ON (II).
   - 4. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     CKP sensor 3P connector: disconnected

     Test circuit IGP(CRANK)

     Test point 1 CKP sensor 3P connector No. 1 (YEL/BLK)

     Test point 2 Body ground

GETtheMANUALS.org

Fig. 154: Measuring Voltage Between CKP Sensor 3P Connector No. 1 (YEL/BLK) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The IGP(CRANK)/FI MAIN RLY OUT wire is OK. Go to step 3.

NO : Repair an open in the IGP(CRANK)/FI MAIN RLY OUT wire between the CKP sensor and PGM-FI main relay 1, then **do the repair verification** .

3. Determine possible failure area (CRANK P line, LG2(CRANK) line):
   - 1. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     CKP sensor 3P connector: disconnected

     Test circuit CRANK P

     Test point 1 CKP sensor 3P connector No. 3 (BLU)

     Test point 2 Body ground

Fig. 155: Measuring Voltage Between CKP Sensor 3P Connector No. 3 (BLU) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5.0 V?

GETtheMANUALS.org

YES : Go to step 4.

NO : Go to step 5.

4. Open wire check (LG2(CRANK)/LG2 line):
   - 1. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     CKP sensor 3P connector: disconnected

     Test circuit IGP(CRANK), LG2(CRANK),

     Test point 1 CKP sensor 3P connector No. 1 (YEL/BLK)

     Test point 2 CKP sensor 3P connector No. 2 (BRN/YEL)

Fig. 156: Measuring Voltage Between CKP Sensor 3P Connector No. 1 (YEL/BLK) And CKP Sensor 3P Connector No. 2 (BRN/YEL)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The LG2(CRANK)/LG2 wire is OK. **REPLACE THE CKP SENSOR** , then **do the repair verification** .

NO : Repair an open in the LG2(CRANK)/LG2 wire between the CKP sensor and G101, then **do the repair verification** .

5. Shorted wire check (CRANK P/CRANK P line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connector.

     PCM connector C (49P)

   - 4. Check for continuity between test points 1 and 2.

GETtheMANUALS.org

Test condition IG LOCK (0)

CKP sensor 3P connector: disconnected

PCM connector C (49P): disconnected

Test circuit CRANK P

Test point 1 PCM connector C (49P) No. 42 (BLU)

Test point 2 Body ground

Fig. 157: Checking Continuity Between PCM Connector C (49P) No. 42 (BLU) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short in the CRANK P/CRANK P wire between the PCM (C42) and the CKP sensor, then **do the repair verification** .

NO : The CRANK P/CRANK P wire is not shorted. Go to step 6.

6. Open wire check (CRANK P/CRANK P line):
   - 1. Connect terminals A and B with a jumper wire.

     Terminal A CKP sensor 3P connector No. 3 (BLU)

     Terminal B Body ground

GETtheMANUALS.org

Fig. 158: Connecting Wire Between CKP Sensor 3P Connector No. 3 (BLU) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 2. Check for continuity between test points 1 and 2.

  Test condition IG LOCK (0)

  CKP sensor 3P connector: disconnected

  CKP sensor 3P connector No. 3: jumped to body ground

  PCM connector C (49P): disconnected

  Test circuit CRANK P

  Test point 1 PCM connector C (49P) No. 42 (BLU)

  Test point 2 Body ground

Fig. 159: Checking Continuity Between PCM Connector C (49P) No. 42 (BLU) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The CRANK P/CRANK P wire is OK. **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-**

GETtheMANUALS.org

good PCM See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

NO : Repair an open in the CRANK P/CRANK P wire between the PCM (C42) and the CKP sensor, then **do the repair verification** .

REPAIR VERIFICATION

- 1. Turn the ignition switch to LOCK (0).
- 2. Reconnect all connectors.
- 3. Turn the ignition switch to ON (II).
- 4. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 5. **DO THE PCM IDLE LEARN PROCEDURE** .
- 6. **Do the CKP pattern clear/CKP pattern learn procedure** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 7. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0335 CKP SENSOR NO SIGNAL			

Is DTC P0335 indicated?

YES : Check for poor connections or loose terminals at the CKP sensor and the PCM. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then recheck. If the PCM was substituted, go to step 1.

NO : Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

DTC P0339: CKP SENSOR CIRCUIT INTERMITTENT INTERRUPTION

GETtheMANUALS.org

DTC Troubleshooting: P0339

Fig. 160: DTC Troubleshooting Flow Chart (P0339)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0339 CKP SENSOR CIRCUIT INTERMITTENT INTERRUPTION			

GETtheMANUALS.org

1. Problem verification (idling):
   - 1. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 3. Start the engine, and let it idle for 10 seconds.
   - 4. Monitor the OBD STATUS for DTC P0339 in the DTCs MENU with the HDS.

DTC Description	OBD STATUS
P0339 CKP SENSOR CIRCUIT INTERMITTENT INTERRUPTION	

Does the HDS indicate FAILED?

YES : The failure is duplicated. Go to step 3.

NO : If the HDS indicates PASSED, go to step 2. If the HDS indicates NOT COMPLETED, keep idling until a result comes on.

2. Problem verification (test-drive):
   - 1. Test-drive the vehicle for several minutes in the range of these recorded freeze data parameters:
     - ENGINE SPEED
     - VEHICLE SPEED
   - 2. Monitor the OBD STATUS for DTC P0339 in the DTCs MENU with the HDS.

DTC Description	OBD STATUS
P0339 CKP SENSOR CIRCUIT INTERMITTENT INTERRUPTION	

Does the HDS indicate FAILED?

YES : The failure is duplicated. Go to step 3.

NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the CKP sensor and the PCM. If the HDS indicates NOT COMPLETED, retest and check the OBD STATUS again.

3. Connectors and terminals condition check:
   - 1. Check for poor connections or loose terminals at these locations:
     - CKP sensor
     - PCM
     - Engine ground
     - Body ground

Are the connections and terminals OK?

GETtheMANUALS.org

YES : Go to step 4.

NO : Repair the connections or terminals, then **do the repair verification** .

4. CKP pulse plate visual check:
   - 1. **REMOVE THE CKP SENSOR** , and check for damage to the CKP pulse plate.

Is the pulse plate damaged?

YES : **REPLACE THE CKP PULSE PLATE** , then **do the repair verification** .

NO : **REPLACE THE CKP SENSOR** , then **do the repair verification** .

REPAIR VERIFICATION

- 1. Turn the ignition switch to LOCK (0).
- 2. Reconnect all connectors.
- 3. Turn the ignition switch to ON (II).
- 4. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 5. **DO THE PCM IDLE LEARN PROCEDURE** .
- 6. **Do the CKP pattern clear/CKP pattern learn procedure** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 7. Start the engine, and let it idle for 10 seconds, or test-drive the vehicle for several minutes under the freeze data conditions (same as step **2-1**).
- 8. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0339 CKP SENSOR CIRCUIT INTERMITTENT INTERRUPTION			

Is DTC P0339 indicated?

YES : Check for poor connections or loose terminals at the CKP sensor and the PCM, then go to step 1.

NO : Troubleshooting is complete. If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

DTC P0340: CMP SENSOR A NO SIGNAL

GETtheMANUALS.org

DTC Troubleshooting: P0340

Fig. 161: DTC Troubleshooting Flow Chart (P0340)

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0340 CMP SENSOR A NO PULSE			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 3. Start the engine.
   - 4. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0340 CMP SENSOR A NO PULSE			

Is DTC P0340 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at CMP sensor A and the PCM.

2. Open wire check (IG1(CAM)/IG1(MAIN)/IG1 ACG line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     CMP sensor A 3P connector

   - 3. Turn the ignition switch to ON (II).
   - 4. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     CMP sensor A 3P connector: disconnected

     Test circuit IG1(CAM)

     Test point 1 CMP sensor A 3P connector No. 1 (WHT)

GETtheMANUALS.org

Test point 2 Body ground

Fig. 162: Measuring Voltage Between CMP Sensor A 3P Connector No. 1 (WHT) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The IG1(CAM)/IG1(MAIN)/IG1 ACG wire is OK. Go to step 3.

NO : Repair an open in the IG1(CAM)/IG1(MAIN)/IG1 ACG wire between No. B2 (10 A) fuse in the under-dash fuse/relay box and CMP sensor A, then **do the repair verification** .

3. Determine possible failure area (CAM line, others):
   - 1. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     CMP sensor A 3P connector: disconnected

     Test circuit CAM

     Test point 1 CMP sensor A 3P connector No. 3 (BLU)

     Test point 2 Body ground

Fig. 163: Measuring Voltage Between CMP Sensor A 3P Connector No. 3 (BLU) And Body Ground

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5.0 V?

YES : The CAM wire is OK. Go to step 4.

NO : There is a problem in the CAM wire. Go to step 5.

4. Open wire check (LG2 line):
   - 1. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     CMP sensor A 3P connector: disconnected

     Test circuit IG1(CAM), LG2

     Test point 1 CMP sensor A 3P connector No. 1 (WHT)

     Test point 2 CMP sensor A 3P connector No. 2 (BRN)

Fig. 164: Measuring Voltage Between CMP Sensor B 3P Connector No. 1 (WHT) And No. 2 (BRN)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The LG2 wire is OK. **REPLACE CMP SENSOR A** , then **do the repair verification** .

NO : Repair an open in the LG2 wire between CMP sensor A and G101, then **do the repair verification** .

5. Shorted wire check (CAM line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connector.

     PCM connector C (49P)

GETtheMANUALS.org

- 4. Check for continuity between test points 1 and 2.

  Test condition IG LOCK (0)

  CMP sensor A 3P connector: disconnected

  PCM connector C (49P): disconnected

  Test circuit CAM

  Test point 1 PCM connector C (49P) No. 16 (BLU)

  Test point 2 Body ground

Fig. 165: Checking Continuity Between PCM Connector C (49P) No. 16 (BLU) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short in the CAM wire between the PCM (C16) and CMP sensor A, then **do the repair verification** .

NO : The CAM wire is not shorted. Go to step 6.

6. Open wire check (CAM line):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     CMP sensor A 3P connector: disconnected

     PCM connector C (49P): disconnected

     Test circuit CAM

GETtheMANUALS.org

Test point 1 PCM connector C (49P) No. 16 (BLU)

Test point 2 CMP sensor A 3P connector No. 3 (BLU)

Fig. 166: Checking Continuity Between PCM Connector C (49P) No. 16 (BLU) And CMP Sensor A 3P Connector No. 3 (BLU)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The CAM wire is OK. **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM UPDATE** or **PCM REMOVAL AND INSTALLATION** , then **do the repair verification** .

NO : Repair an open in the CAM wire between the PCM (C16) and CMP sensor A, then **do the repair verification** .

REPAIR VERIFICATION

- 1. Turn the ignition switch to LOCK (0).
- 2. Reconnect all connectors.
- 3. Turn the ignition switch to ON (II).
- 4. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 5. **DO THE PCM IDLE LEARN PROCEDURE** .
- 6. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame

GETtheMANUALS.org

P0340 CMP SENSOR A NO PULSE			

Is DTC P0340 indicated?

YES : Check for poor connections or loose terminals at CMP sensor A and the PCM. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then recheck. If the PCM was substituted, go to step 1.

NO : Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM UPDATE** or **PCM REMOVAL AND INSTALLATION** . If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

DTC P0341: CMP SENSOR A AND CKP SENSOR INCORRECT PHASE DETECTED

GETtheMANUALS.org

DTC Troubleshooting: P0341

Fig. 167: DTC Troubleshooting Flow Chart (P0341)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and**

GETtheMANUALS.org

review the general troubleshooting information See HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS or HOW TO TROUBLESHOOT THE A/T SYSTEM .

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0341 CMP SENSOR A AND CKP SENSOR INCORRECT PHASE DETECTED			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 3. Test-drive at a steady speed between 19-38 mph (30-60 km/h) for 10 minutes.
   - 4. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0341 CMP SENSOR A AND CKP SENSOR INCORRECT PHASE DETECTED			

Is DTC P0341 indicated?

YES : Go to step 5.

NO : Go to step 2.

2. VTC system check (VTC TEST with the HDS):
   - 1. Do the VTC TEST in the INSPECTION MENU with the HDS.

Is the result OK?

YES : Go to step 3.

NO : Go to step 5.

3. VTC system check (VTC STATUS check with the HDS):
   - 1. Test-drive at a steady speed between 19-38 mph (30-60 km/h) for 10 minutes.
   - 2. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
VTC STATUS	ON			

GETtheMANUALS.org

Do the current condition(s) match the threshold?

YES : Go to step 4.

NO : Redo the test-drive, then recheck the VTC STATUS.

4. VTC system check (DTC check):
   - 1. Monitor the OBD STATUS for DTC P0341 in the DTCs MENU with the HDS.

DTC Description	OBD STATUS
P0341 CMP SENSOR A AND CKP SENSOR INCORRECT PHASE DETECTED	

Does the HDS indicate FAILED?

YES : Go to step 5.

NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time.

If the HDS indicates NOT COMPLETED, go to step 3 and recheck.

5. VTC oil control valve operation check:
   - 1. TEST THE VTC OIL CONTROL SOLENOID VALVE .

Is the VTC oil control solenoid valve OK?

YES : Go to step 6.

NO : REPLACE THE VTC OIL CONTROL SOLENOID VALVE , then **do the repair verification** .

6. Camshaft timing check:
   - 1. **Check the camshaft timing** See VALVE, SPRING, AND VALVE SEAL REMOVAL AND INSTALLATION or VALVE CLEARANCE ADJUSTMENT .

Is the camshaft timing OK?

YES : Go to step 7.

NO : **Reset the camshaft timing** See VALVE CLEARANCE ADJUSTMENT or VALVE, SPRING, AND VALVE SEAL REMOVAL AND INSTALLATION , then **do the repair verification** .

7. Cam chain check:
   - 1. CHECK FOR DAMAGE OR STRETCH AT THE CAM CHAIN .

Is the cam chain damaged or stretched?

GETtheMANUALS.org

YES : REPLACE THE CAM CHAIN AND THE AUTO-TENSIONER , then **do the repair verification** .

NO : Go to step 8.

8. VTC actuator check:
   - 1. INSPECT THE VTC ACTUATOR .

Is the actuator OK?

YES : Go to step 9.

NO : REPLACE THE VTC ACTUATOR , then **do the repair verification** .

9. PGM-FI system check (DTC check):
   - 1. Turn the ignition switch to ON (II).
   - 2. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 3. **DO THE PCM IDLE LEARN PROCEDURE** .
   - 4. **Do the CKP pattern clear/CKP pattern learn procedure** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 5. Test-drive at a steady speed between 19-38 mph (30-60 km/h) for 10 minutes.
   - 6. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0341 CMP SENSOR A AND CKP SENSOR INCORRECT PHASE DETECTED			

Is DTC P0341 indicated?

YES : Check for poor connections or loose terminals at the VTC oil control solenoid valve and the PCM, then go to step 1.

NO : Intermittent failure, the system is OK at this time.

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Turn the ignition switch to ON (II).
- 2. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** or **HOW TO TROUBLESHOOT THE A/T SYSTEM** .
- 3. **DO THE PCM IDLE LEARN PROCEDURE** .
- 4. **Do the CKP pattern clear/CKP pattern learn procedure** See **HOW TO TROUBLESHOOT THE**

GETtheMANUALS.org

A/T SYSTEM or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .

- 5. Test-drive at a steady speed between 19-38 mph (30-60 km/h) for 10 minutes.
- 6. Monitor the OBD STATUS for DTC P0341 in the DTCs MENU with the HDS.

DTC Description	OBD STATUS
P0341 CMP SENSOR A AND CKP SENSOR INCORRECT PHASE DETECTED	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED : Troubleshooting is complete. If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED : Go to step 1 and recheck.

NOT COMPLETED : Meet the test condition, and check the OBD STATUS again.

DTC P0344: CMP SENSOR A CIRCUIT INTERMITTENT INTERRUPTION

GETtheMANUALS.org

DTC Troubleshooting: P0344

Fig. 168: DTC Troubleshooting Flow Chart (P0344)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0344 CMP SENSOR A CIRCUIT INTERMITTENT INTERRUPTION			

GETtheMANUALS.org

1. Problem verification (idling):
   - 1. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 3. Start the engine, and let it idle for 10 seconds.
   - 4. Monitor the OBD STATUS for DTC P0344 in the DTCs MENU with the HDS.

DTC Description	OBD STATUS
P0344 CMP SENSOR A CIRCUIT INTERMITTENT INTERRUPTION	

Does the HDS indicate FAILED?

YES : The failure is duplicated. Go to step 3.

NO : If the HDS indicates PASSED, go to step 2. If the HDS indicates NOT COMPLETED, keep idling until a result comes on.

2. Problem verification (test-drive):
   - 1. Test-drive the vehicle for several minutes in the range of these recorded freeze data parameters:
     - ENGINE SPEED
     - VEHICLE SPEED
   - 2. Monitor the OBD STATUS for DTC P0344 in the DTCs MENU with the HDS.

DTC Description	OBD STATUS
P0344 CMP SENSOR A CIRCUIT INTERMITTENT INTERRUPTION	

Does the HDS indicate FAILED?

YES : The failure is duplicated. Go to step 3.

NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at CMP sensor A and the PCM. If the HDS indicates NOT COMPLETED, retest and check the OBD STATUS again.

3. Connectors and terminals visual check:
   - 1. Check for poor connections or loose terminals at these locations:
     - CMP sensor A
     - PCM
     - Engine ground
     - Body ground

Are the connections and terminals OK?

GETtheMANUALS.org

YES : Go to step 4.

NO : Repair the connections or terminals, then **do the repair verification** .

4. CMP pulse plate A visual check:
   - 1. Remove the cylinder head cover, then check for damage to CMP pulse plate A.

Is the pulse plate damaged?

YES : **Replace CMP pulse plate A** See **CMP PULSE PLATE A REMOVAL AND INSTALLATION** or **CMP PULSE PLATE B REMOVAL AND INSTALLATION** , then **do the repair verification** .

NO : **REPLACE CMP SENSOR A** , then **do the repair verification** .

REPAIR VERIFICATION

- 1. Turn the ignition switch to LOCK (0).
- 2. Reconnect all connectors.
- 3. Turn the ignition switch to ON (II).
- 4. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 5. **DO THE PCM IDLE LEARN PROCEDURE** .
- 6. Start the engine, and let it idle for 10 seconds, or test-drive the vehicle for several minutes under the freeze data conditions (same as step **2-1**).
- 7. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0344 CMP SENSOR A CIRCUIT INTERMITTENT INTERRUPTION			

Is DTC P0344 indicated?

YES : Check for poor connections or loose terminals at CMP sensor A and the PCM, then go to step 1.

NO : Troubleshooting is complete. If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

DTC P0351: NO. 1 CYLINDER IGNITION COIL CIRCUIT MALFUNCTION; DTC P0352: NO. 2 CYLINDER IGNITION COIL CIRCUIT MALFUNCTION; DTC P0353: NO. 3 CYLINDER IGNITION COIL CIRCUIT MALFUNCTION; DTC P0354: NO. 4 CYLINDER IGNITION COIL CIRCUIT MALFUNCTION

GETtheMANUALS.org

DTC Troubleshooting: P0351, P0352, P0353, P0354

Fig. 169: DTC Troubleshooting Flow Chart (P0351, P0352, P0353, P0354)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and**

GETtheMANUALS.org

review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0351 NO. 1 CYLINDER IGNITION COIL CIRCUIT MALFUNCTION			
P0352 NO. 2 CYLINDER IGNITION COIL CIRCUIT MALFUNCTION			
P0353 NO. 3 CYLINDER IGNITION COIL CIRCUIT MALFUNCTION			
P0354 NO. 4 CYLINDER IGNITION COIL CIRCUIT MALFUNCTION			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 3. Start the engine.
   - 4. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0351 NO. 1 CYLINDER IGNITION COIL CIRCUIT MALFUNCTION			
P0352 NO. 2 CYLINDER IGNITION COIL CIRCUIT MALFUNCTION			
P0353 NO. 3 CYLINDER IGNITION COIL CIRCUIT MALFUNCTION			
P0354 NO. 4 CYLINDER IGNITION COIL CIRCUIT MALFUNCTION			

Is DTC P0351, P0352, P0353, and/or P0354 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the ignition coil and the PCM.

2. Ignition coil check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Exchange the ignition coil from the problem cylinder with one from another cylinder.
   - 3. Start the engine.

GETtheMANUALS.org

- 4. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0351 NO. 1 CYLINDER IGNITION COIL CIRCUIT MALFUNCTION			
P0352 NO. 2 CYLINDER IGNITION COIL CIRCUIT MALFUNCTION			
P0353 NO. 3 CYLINDER IGNITION COIL CIRCUIT MALFUNCTION			
P0354 NO. 4 CYLINDER IGNITION COIL CIRCUIT MALFUNCTION			

Is DTC indicated at the exchanged position?

YES : REPLACE THE FAULTY IGNITION COIL , then **do the repair verification** .

NO : Go to step 3.

3. Shorted wire check (IG1(COIL) line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check the following fuse.

     Fuse No. A17 (15 A)

     Location Under-hood fuse/relay box

Is the fuses OK?

YES : Go to step 4.

NO : Repair a short in the IG1(COIL) wire between the ignition coil and the No. A17 (15 A) fuse. Also replace the No. A17 (15 A) fuse, then **do the repair verification** .

4. Relay check:
   - 1. Remove the ignition coil relay (A) from the under-hood fuse/relay box.

GETtheMANUALS.org

Fig. 170: Identifying Ignition Coil Relay
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 2. **TEST THE IGNITION COIL RELAY** .

Is the relay OK?

YES : Go to step 5.

NO : Replace the ignition coil relay, then **do the repair verification** .

5. Open wire check (IG1(IGN COIL) lines):
   - 1. Reinstall the ignition coil relay.
   - 2. Disconnect the following connector(s).

     Ignition coil 3P connector (problem cylinder)

   - 3. Turn the ignition switch to ON (II).
   - 4. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     Ignition coil 3P connector (problem cylinder): disconnected

     Test circuit IG1(IGN COIL)

     Test point 1 Ignition coil 3P connector No. 1 (RED)

     Test point 2 Body ground

GETtheMANUALS.org

Fig. 171: Measuring Voltage Between Ignition Coil 3P Connector No. 1 (RED) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The IG1(IGN COIL) wire is OK. Go to step 6.

NO : Repair an open in the IG1(IGN COIL) wire between the ignition coil and the ignition coil relay, then **do the repair verification** .

6. Open wire check (PG(COIL) lines):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check for continuity between test points 1 and 2.

     Test condition IG ON (II)

     Ignition coil 3P connector (problem cylinder): disconnected

     Test circuit PG(COIL)

     Test point 1 Ignition coil 3P connector No. 2 (BLK)

     Test point 2 Body ground

Fig. 172: Checking Continuity Between Ignition Coil 3P Connector No. 2 (BLK) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

Is there continuity?

YES : The PG(COIL) wire is OK. Go to step 7.

NO

Repair an open in the PG(COIL) wire between the ignition coil and G102, then **do the repair verification** .

7. Shorted wire check (IGN PULSE lines):
   - 1. Jump the SCS line with the HDS.
   - 2. Disconnect the following connector.

     PCM connector C (49P)

   - 3. Check for continuity between body ground and the appropriate PCM connector terminal of the problem ignition coil (see table).

     Test condition IG LOCK (0)

     Ignition coil 3P connector (problem cylinder): disconnected

     PCM connector C (49P): disconnected

PROBLEM CYLINDER	DTC	PCM TERMINAL	WIRE COLOR
No. 1	P0351	C25	YEL
No. 2	P0353	C26	BLU
No. 3	P0355	C27	WHT
No. 4	P0357	C28	PUR

Fig. 173: Checking Continuity Between Body Ground And PCM Connector Terminal Of Ignition Coil
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

Is there continuity?

YES : Repair a short in the IGN PULSE wire between the PCM and the ignition coil, then **do the repair verification** .

NO : The IGN PULSE wires are not shorted. Go to step 8.

8. Open wire check (IGN PULSE lines):
   - 1. Check for continuity between appropriate ignition coil 3P connector terminal No. 1 and the appropriate PCM connector terminal of the problem ignition coil (see table).

     Test condition IG LOCK (0)

     Ignition coil 3P connector (problem cylinder): disconnected

     PCM connector C (49P): disconnected

PROBLEM CYLINDER	DTC	PCM TERMINAL	WIRE COLOR
No. 1	P0351	C25	YEL
No. 2	P0353	C26	BLU
No. 3	P0355	C27	WHT
No. 4	P0357	C28	PUR

Fig. 174: Checking Continuity Between Ignition Coil 3P Connector Terminal No. 1 And PCM Connector Terminal Of Ignition Coil
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The IGN PULSE wires are OK. **Update the PCM** See **PCM REMOVAL AND**

GETtheMANUALS.org

INSTALLATION or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

NO : Repair an open in the IGN PULSE wire between the PCM and the ignition coil, then **do the repair verification** .

REPAIR VERIFICATION

- 1. Turn the ignition switch to LOCK (0).
- 2. Reconnect all connectors.
- 3. Turn the ignition switch to ON (II).
- 4. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 5. **DO THE PCM IDLE LEARN PROCEDURE** .
- 6. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0351 NO. 1 CYLINDER IGNITION COIL CIRCUIT MALFUNCTION			
P0352 NO. 2 CYLINDER IGNITION COIL CIRCUIT MALFUNCTION			
P0353 NO. 3 CYLINDER IGNITION COIL CIRCUIT MALFUNCTION			
P0354 NO. 4 CYLINDER IGNITION COIL CIRCUIT MALFUNCTION			

Is DTC P0351, P0352, P0353 and/or P0354 indicated?

YES : Check for poor connections or loose terminals at the ignition coil and the PCM. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then recheck. If the PCM was substituted, go to step 1.

NO : Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

DTC P0365: CMP SENSOR B CIRCUIT NO SIGNAL

GETtheMANUALS.org

DTC Troubleshooting: P0365

GETtheMANUALS.org

Fig. 175: DTC Troubleshooting Flow Chart (P0365)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0365 CMP SENSOR B CIRCUIT NO SIGNAL			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 3. Start the engine.
   - 4. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0365 CMP SENSOR B CIRCUIT NO SIGNAL			

Is DTC P0365 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at CMP sensor B and the PCM.

2. Open wire check (IGP(TDC)/IGP(MAIN)/FI MAIN RLY OUT line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     CMP sensor B 3P connector

   - 3. Turn the ignition switch to ON (II).
   - 4. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     CMP sensor B 3P connector: disconnected

     Test circuit IGP(TDC)

     Test point 1 CMP sensor B 3P connector No. 1 (YEL)

GETtheMANUALS.org

Test point 2 Body ground

Fig. 176: Measuring Voltage Between CMP Sensor A 3P Connector No. 1 (YEL) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The IGP(TDC)/IGP(MAIN)/FI MAIN RLY OUT wire is OK. Go to step 3.

NO : Repair an open in the IGP(TDC)/IGP(MAIN)/FI MAIN RLY OUT wire between CMP sensor B and PGM-FI main relay 1, then **do the repair verification** .

3. Determine possible failure area (TDC line, others):
   - 1. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     CMP sensor B 3P connector: disconnected

     Test circuit TDC

     Test point 1 CMP sensor B 3P connector No. 3 (GRN)

     Test point 2 Body ground

Fig. 177: Measuring Voltage Between CMP Sensor B 3P Connector No. 3 (GRN) And Body Ground

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5.0 V?

YES : Go to step 4.

NO : Go to step 5.

4. Open wire check (LG2 line):
   - 1. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     CMP sensor B 3P connector: disconnected

     Test circuit IGP(TDC), LG2

     Test point 1 CMP sensor B 3P connector No. 1 (YEL)

     Test point 2 CMP sensor B 3P connector No. 2 (BRN)

Fig. 178: Measuring Voltage Between CMP Sensor B 3P Connector No. 1 (YEL) And No. 2 (BRN)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The LG2 wire is OK. **REPLACE CMP SENSOR B** , then **do the repair verification** .

NO : Repair an open in the LG2 wire between CMP sensor B and G101, then **do the repair verification** .

5. Shorted wire check (TDC line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connector.

     PCM connector C (49P)

GETtheMANUALS.org

- 4. Check for continuity between test points 1 and 2.

  Test condition IG LOCK (0)

  CMP sensor B 3P connector: disconnected

  PCM connector C (49P): disconnected

  Test circuit TDC

  Test point 1 PCM connector C (49P) No. 41 (GRN)

  Test point 2 Body ground

Fig. 179: Checking Continuity Between PCM Connector C (49P) No. 41 (GRN) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short in the TDC wire between the PCM (C41) and CMP sensor B, then **do the repair verification** .

NO : The TDC wire is not shorted. Go to step 6.

6. Open wire check (TDC line):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     CMP sensor B 3P connector: disconnected

     PCM connector C (49P): disconnected

     Test circuit TDC

GETtheMANUALS.org

Test point 1 PCM connector C (49P) No. 41 (GRN)

Test point 2 CMP sensor B 3P connector No. 3 (GRN)

Fig. 180: Checking Continuity Between PCM Connector C (49P) No. 41 (GRN) And CMP Sensor B 3P Connector No. 3 (GRN)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The TDC wire is OK. **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

NO : Repair an open in the TDC wire between the PCM (C41) and CMP sensor B, then **do the repair verification** .

REPAIR VERIFICATION

- 1. Turn the ignition switch to LOCK (0).
- 2. Reconnect all connectors.
- 3. Turn the ignition switch to ON (II).
- 4. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 5. **DO THE PCM IDLE LEARN PROCEDURE** .
- 6. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame

GETtheMANUALS.org

P0365 CMP SENSOR B CIRCUIT NO SIGNAL			

Is DTC P0365 indicated?

YES : Check for poor connections or loose terminals at CMP sensor B and the PCM. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then recheck. If the PCM was substituted, go to step 1.

NO : Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

DTC P0369: CMP SENSOR B CIRCUIT INTERMITTENT INTERRUPTION

GETtheMANUALS.org

DTC Troubleshooting: P0369

Fig. 181: DTC Troubleshooting Flow Chart (P0369)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0369 CMP SENSOR B CIRCUIT INTERMITTENT INTERRUPTION			

GETtheMANUALS.org

1. Problem verification (idling):
   - 1. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 3. Start the engine, and let it idle for 10 seconds.
   - 4. Monitor the OBD STATUS for DTC P0369 in the DTCs MENU with the HDS.

DTC Description	OBD STATUS
P0369 CMP SENSOR B CIRCUIT INTERMITTENT INTERRUPTION	

Does the HDS indicate FAILED?

YES : The failure is duplicated. Go to step 3.

NO : If the HDS indicates PASSED, go to step 2. If the HDS indicates NOT COMPLETED, keep idling until a result comes on.

2. Problem verification (test-drive):
   - 1. Test-drive the vehicle for several minutes in the range of these recorded freeze data parameters:
     - ENGINE SPEED
     - VEHICLE SPEED
   - 2. Monitor the OBD STATUS for DTC P0369 in the DTCs MENU with the HDS.

DTC Description	OBD STATUS
P0369 CMP SENSOR B CIRCUIT INTERMITTENT INTERRUPTION	

Does the HDS indicate FAILED?

YES : The failure is duplicated. Go to step 3.

NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at CMP sensor B and the PCM. If the HDS indicates NOT COMPLETED, retest and check the OBD STATUS again.

3. Connectors and terminals condition check:
   - 1. Check for poor connections or loose terminals at these locations:
     - CMP sensor B
     - PCM
     - Engine ground
     - Body ground

Are the connections and terminals OK?

GETtheMANUALS.org

YES : Go to step 4.

NO : Repair the connections or terminals, then **do the repair verification** .

4. CMP pulse plate B visual check:
   - 1. Remove the cylinder head cover, then check for damage to CMP pulse plate B.

Is the pulse plate damaged?

YES : **Replace CMP pulse plate B** See **CMP PULSE PLATE A REMOVAL AND INSTALLATION** or **CMP PULSE PLATE B REMOVAL AND INSTALLATION** , then **do the repair verification** .

NO : **REPLACE CMP SENSOR B** , then **do the repair verification** .

REPAIR VERIFICATION

- 1. Turn the ignition switch to LOCK (0).
- 2. Reconnect all connectors.
- 3. Turn the ignition switch to ON (II).
- 4. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 5. **DO THE PCM IDLE LEARN PROCEDURE** .
- 6. Start the engine, and let it idle for 10 seconds, or test-drive the vehicle for several minutes under the freeze data conditions (same as step **2-1**).
- 7. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0369 CMP SENSOR B CIRCUIT INTERMITTENT INTERRUPTION			

Is DTC P0369 indicated?

YES : Check for poor connections or loose terminals at CMP sensor B and the PCM, then go to step 1.

NO : Troubleshooting is complete. If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

DTC P0420: CATALYST SYSTEM EFFICIENCY BELOW THRESHOLD

GETtheMANUALS.org

DTC Troubleshooting: P0420

Fig. 182: DTC Troubleshooting Flow Chart (P0420)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**
- **If some of the DTCs listed below are stored at the same time as DTC P0420, troubleshoot them first, then recheck for DTC P0420.**
  - **P0137, P0138: Secondary HO2S (Sensor 2)**
  - **P0141: Secondary HO2S (Sensor 2) heater**
  - **P0300: Random misfire**
  - **P0301, P0302, P0303, P0304: No. 1, No. 2, No. 3, No. 4 cylinder misfire detected**
- **Poor quality fuel may cause this DTC.**

GETtheMANUALS.org

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0420 CATALYST SYSTEM EFFICIENCY BELOW THRESHOLD			

1. PGM-FI system check 1:
   - 1. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 3. Start the engine. Hold the engine speed at 3, 000 rpm without load (in P or N) until the radiator fan comes on, then let it idle.
   - 4. Test-drive under these conditions:
     - Engine coolant temperature (ECT SENSOR 1) above 158 °F (70 °C)
     - Transmission in D
     - Vehicle speed between 45-75 mph (70-120 km/h) for 5 minutes or more with cruise control set
     - Vehicle speed between 55-75 mph (90-120 km/h) for 10 seconds, then decelerate (with the throttle fully closed). Repeat this three or more times
     - Maintain the vehicle speed at 55 mph (88 km/h) for 5 minutes or more with cruise control set

Signal	Current conditions	
	Values	Unit
ECT SENSOR 1		
VEHICLE SPEED		

   - 5. Monitor the OBD STATUS for DTC P0420 with the HDS.

DTC Description	OBD STATUS
P0420 CATALYST SYSTEM EFFICIENCY BELOW THRESHOLD	

Does the HDS indicate FAILED?

YES : **Replace the WU-TWC** See **UNDER-FLOOR TWC REMOVAL AND INSTALLATION** or **WARM UP TWC REMOVAL AND INSTALLATION** , then **do the repair verification** .

NO : If the HDS indicates EXECUTING, go to step 2. If the HDS indicates OUT OF CONDITION, meet the test condition and recheck. If the HDS indicates PASSED, intermittent failure the system is OK at this time.

2. PGM-FI system check 2:
   - 1. Continue test-drive until a result comes on.
   - 2. Monitor the OBD STATUS for DTC P0420 with the HDS.

GETtheMANUALS.org

DTC Description	OBD STATUS
P0420 CATALYST SYSTEM EFFICIENCY BELOW THRESHOLD	

Does the HDS indicate FAILED?

YES : **Replace the WU-TWC** See **UNDER-FLOOR TWC REMOVAL AND INSTALLATION** or **WARM UP TWC REMOVAL AND INSTALLATION** , then **do the repair verification** .

NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time. If the HDS indicates EXECUTING, keep driving until a result comes on. If the HDS indicates OUT OF CONDITION, meet the test condition and recheck.

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Turn the ignition switch to ON (II).
- 2. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 3. **DO THE PCM IDLE LEARN PROCEDURE** .
- 4. Drive the vehicle until the result of CATA MONITOR CONDITION in the DATA LIST on HDS indicates OK.

NOTE: Test-drive may to 10 minutes or more.

Signal	Current conditions	
	Values	Unit
CATA MONITOR CONDITION		

- 5. Test-drive under these conditions:
  - Engine coolant temperature (ECT SENSOR 1) above 158 °F (70 °C)
  - Transmission in D
  - Vehicle speed between 45-75 mph (72-120 km/h) for 5 minutes or more with cruise control set
  - Vehicle speed between 55-75 mph (72-120 km/h) for 10 seconds, then decelerate (with the throttle fully closed). Repeat this three or more times
  - Maintain the vehicle speed at 55 mph (88 km/h) for 5 minutes or more with cruise control set

Signal	Current conditions	
	Values	Unit
ECT SENSOR 1		
VEHICLE SPEED		

- 6. Monitor the OBD STATUS for DTC P0420 with the HDS.

DTC Description	OBD STATUS

GETtheMANUALS.org

P0420 CATALYST SYSTEM EFFICIENCY BELOW THRESHOLD

Does the HDS indicate PASSED, FAILED, EXECUTING, or OUT OF CONDITION?

PASSED : Troubleshooting is complete. If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED : Go to step 1 and recheck.

EXECUTING : Keep the test condition until a result comes on.

OUT OF CONDITION : Meet the test condition, and check the OBD STATUS again.

DTC P0443: EVAP CANISTER PURGE VALVE CIRCUIT MALFUNCTION

GETtheMANUALS.org

DTC Troubleshooting: P0443

Fig. 183: DTC Troubleshooting Flow Chart (P0443)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Special Tools Required

GETtheMANUALS.org

Vacuum Pump/Gauge, 0-30 inHg Snap-on YA4000A or equivalent, commercially available

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0443 EVAP CANISTER PURGE VALVE CIRCUIT MALFUNCTION			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 3. Start the engine. Hold the engine speed at 3, 000 rpm without load (in P or N) until the radiator fan comes on, then let it idle.
   - 4. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0443 EVAP CANISTER PURGE VALVE CIRCUIT MALFUNCTION			

Is DTC P0443 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the EVAP canister purge valve and the PCM.

2. Determine possible failure area (EVAP canister purge valve stuck open failure, EVAP canister purge valve stuck closed failure):
   - 1. Turn the ignition switch to LOCK (0), and allow the engine to cool below 140 °F (60 °C).
   - 2. Disconnect the vacuum hose (A) from the EVAP canister purge valve (B) in the engine compartment, then connect a vacuum pump/gauge, 0-30 inHg, to the EVAP canister purge valve.

GETtheMANUALS.org

Fig. 184: Identifying Vacuum Hose And EVAP Canister Purge ValveIdentifying
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 3. Start the engine, and let it idle.

Is there vacuum?

YES : The EVAP canister purge valve is stuck open. Go to step 3.

NO : The EVAP canister purge valve is stuck closed. Go to step 5.

3. Determine possible failure area (PC SOL line, EVAP canister purge valve):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     EVAP canister purge valve 2P connector

   - 3. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     EVAP canister purge valve 2P connector: disconnected

     Test circuit PC SOL

     Test point 1 EVAP canister purge valve 2P connector No. 1 (YEL)

     Test point 2 Body ground

GETtheMANUALS.org

Fig. 185: Checking Continuity Between EVAP Canister Purge Valve 2P Connector No. 1 (YEL) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : There is a problem in the PC SOL line. Go to step 4.

NO : **REPLACE THE EVAP CANISTER PURGE VALVE** , then **do the repair verification** .

4. Shorted wire check (PC SOL line):
   - 1. Jump the SCS line with the HDS.
   - 2. Disconnect the following connector.

     PCM connector B (49P)

   - 3. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     EVAP canister purge valve 2P connector: disconnected

     PCM connector B (49P): disconnected

     Test circuit PC SOL

     Test point 1 EVAP canister purge valve 2P connector No. 1 (YEL)

     Test point 2 Body ground

GETtheMANUALS.org

Fig. 186: Checking Continuity Between EVAP Canister Purge Valve 2P Connector No. 1 (YEL) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short in the PC SOL wire between the PCM (B3) and the EVAP canister purge valve, then **do the repair verification** .

NO : The PC SOL wire is OK. **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

5. Open wire check (IG1(PC SOL)/IG1(MAIN)/IG1 ACG line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     EVAP canister purge valve 2P connector

   - 3. Turn the ignition switch to ON (II).
   - 4. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     EVAP canister purge valve 2P connector: disconnected

     Test circuit IG1(PC SOL)

     Test point 1 EVAP canister purge valve 2P connector No. 2 (WHT)

     Test point 2 Body ground

GETtheMANUALS.org

Fig. 187: Measuring Voltage Between EVAP Canister Purge Valve 2P Connector No. 2 (WHT) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The IG1(PC SOL)/IG1(MAIN)/IG1 ACG wire is OK. Go to step 6.

NO : Repair an open in the IG1(PC SOL)/IG1(MAIN)/IG1 ACG wire between the EVAP canister purge valve and the No. B2 (15 A) fuse in the under-dash fuse/relay box, then **do the repair verification** .

6. Open wire check (PC SOL line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connector.

     PCM connector B (49P)

   - 4. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     EVAP canister purge valve 2P connector: disconnected

     PCM connector B (49P): disconnected

     Test circuit PC SOL

     Test point 1 PCM connector B (49P) No. 3 (YEL)

     Test point 2 EVAP canister purge valve 2P connector No. 1 (YEL)

GETtheMANUALS.org

Fig. 188: Checking Continuity Between PCM Connector B (49P) No. 3 (YEL) And EVAP Canister Purge Valve 2P Connector No. 1 (YEL)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The PC SOL wire is OK. Go to step 7.

NO : Repair an open in the PC SOL wire between the PCM (B3) and the EVAP canister purge valve, then **do the repair verification** .

7. EVAP canister purge valve internal resistance check:
   - 1. At the purge valve side, measure the resistance between test points 1 and 2.

     Test condition IG LOCK (0)

     EVAP canister purge valve 2P connector: disconnected

     PCM connector B (49P): disconnected

     Test circuit IG1, PC SOL

     Test point 1 EVAP canister purge valve 2P connector No. 1 (EVAP canister purge valve side)

     Test point 2 EVAP canister purge valve 2P connector No. 2 (EVAP canister purge valve side)

GETtheMANUALS.org

Fig. 189: Measuring Resistance Between EVAP Canister Purge Valve 2P Connector No. 1 And No. 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 23-26 ohms at room temperature?

YES : The EVAP canister purge valve is OK. **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

NO : **REPLACE THE EVAP CANISTER PURGE VALVE** , then **do the repair verification** .

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Turn the ignition switch to LOCK (0).
- 2. Reconnect all connectors.
- 3. Turn the ignition switch to ON (II).
- 4. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 5. **DO THE PCM IDLE LEARN PROCEDURE** .
- 6. Monitor the OBD STATUS for DTC P0443 with the HDS.

DTC Description	OBD STATUS
P0443 EVAP CANISTER PURGE VALVE CIRCUIT MALFUNCTION	

Does the HDS indicate PASSED, FAILED, EXECUTING, or OUT OF CONDITION?

PASSED : Troubleshooting is complete. If the PCM was substituted, **REPLACE THE ORIGINAL PCM** . If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

FAILED : Go to step 1 and recheck. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then check the OBD STATUS again.

EXECUTING : Keep idling until a result comes on.

OUT OF CONDITION : Keep idling until a result comes on.

GETtheMANUALS.org

DTC P0451: FTP SENSOR CIRCUIT RANGE/PERFORMANCE PROBLEM

Fig. 190: DTC Troubleshooting Flow Chart (P0451)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**
- **If DTC P2422 is stored at the same time as DTC P0451, troubleshoot DTC P2422 first, then recheck for DTC P0451.**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0451 FTP SENSOR CIRCUIT RANGE/PERFORMANCE PROBLEM			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .
   - 3. Start the engine, and let it idle for 1 minute.
   - 4. Monitor the OBD STATUS for DTC P0451 with the HDS.

GETtheMANUALS.org

DTC Description	OBD STATUS
P0451 FTP SENSOR CIRCUIT RANGE/PERFORMANCE PROBLEM	

Does the HDS indicate FAILED?

YES : REPLACE THE FTP SENSOR , then **do the repair verification** .

NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the FTP sensor and the PCM. If the HDS indicates NOT COMPLETED, keep idling until a result comes on.

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Turn the ignition switch to ON (II).
- 2. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 3. **DO THE PCM IDLE LEARN PROCEDURE** .
- 4. Start the engine, and let it idle for 1 minute.
- 5. Monitor the OBD STATUS for DTC P0451 in the DTCs MENU with the HDS.

DTC Description	OBD STATUS
P0451 FTP SENSOR CIRCUIT RANGE/PERFORMANCE PROBLEM	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED : Troubleshooting is complete. If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED : Go to step 1 and recheck.

NOT COMPLETED : Meet the test condition, and check the OBD STATUS again.

DTC P0452: FTP SENSOR CIRCUIT LOW VOLTAGE

GETtheMANUALS.org

DTC Troubleshooting: P0452

Fig. 191: DTC Troubleshooting Flow Chart (P0452)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and**

GETtheMANUALS.org

review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0452 FTP SENSOR CIRCUIT LOW VOLTAGE			

1. EVAP system check:
   - 1. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 3. Turn the ignition switch to LOCK (0).
   - 4. Remove the fuel fill cap.
   - 5. Turn the ignition switch to ON (II).
   - 6. Check the parameter(s) below with the HDS.

Signal	Threshold		Current DTC	
	Values	Unit	Values	Unit
FTP SENSOR	Less than 0.3	V		

Do the current condition(s) match the threshold?

YES : Go to step 3.

NO : Go to step 2.

2. Problem verification:
   - 1. Install the fuel fill cap.
   - 2. Start the engine, and let it idle.
   - 3. Monitor the OBD STATUS for DTC P0452 with the HDS.

DTC Description	OBD STATUS
P0452 FTP SENSOR CIRCUIT LOW VOLTAGE	

Does the HDS indicate FAILED?

YES : The failure is duplicated. Go to step 3.

NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the FTP sensor and the PCM. If the HDS indicates NOT COMPLETED, keep idling until a result comes on.

3. Determine possible failure area (PTANK line, others):

GETtheMANUALS.org

- 1. Turn the ignition switch to LOCK (0).
- 2. Disconnect the following connector.

  FTP sensor 3P connector

- 3. Turn the ignition switch to ON (II).
- 4. Check the parameter(s) below with the HDS.

Signal	Threshold		Current DTC	
	Values	Unit	Values	Unit
FTP SENSOR	Less than 0.3	V		

Do the current condition(s) match the threshold?

YES : Go to step 4.

NO : Go to step 5.

4. Shorted wire check (PTANK line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connector.

     PCM connector A (49P)

   - 4. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     FTP sensor 3P connector: disconnected

     PCM connector A (49P): disconnected

     Test circuit PTANK

     Test point 1 FTP sensor 3P connector No. 2 (WHT)

     Test point 2 Body ground

GETtheMANUALS.org

Fig. 192: Checking Continuity Between FTP Sensor 3P Connector No. 2 (WHT) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short in the PTANK wire between the PCM (A37) and the FTP sensor, then **do the repair verification** .

NO : The PTANK wire is OK. **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

5. Determine possible failure area (FTP sensor, others):
   - 1. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     FTP sensor 3P connector: disconnected

     Test circuit VCC6

     Test point 1 FTP sensor 3P connector No. 3 (RED)

     Test point 2 Body ground

Fig. 193: Measuring Voltage Between FTP Sensor 3P Connector No. 3 (RED) And Body Ground

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5.0 V?

YES : REPLACE THE FTP SENSOR , then **do the repair verification** .

NO : There is a problem in the VCC6 line. Go to step 6.

6. Open wire check (VCC6 line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connector.

     PCM connector A (49P)

   - 4. Connect terminals A and B with a jumper wire.

     Terminal A FTP sensor 3P connector No. 3 (RED)

     Terminal B Body ground

Fig. 194: Connecting Wire Between FTP Sensor 3P Connector No. 3 (RED) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

   - 5. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     FTP sensor 3P connector: disconnected

     FTP sensor 3P connector No. 3: jumped to body ground

     PCM connector A (49P): disconnected

     Test circuit VCC6

GETtheMANUALS.org

Test point 1 PCM connector A (49P) No. 30 (RED)

Test point 2 Body ground

Fig. 195: Checking Continuity Between PCM Connector A (49P) No. 30 (RED) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The VCC6 wire is OK. **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

NO : Repair an open in the VCC6 wire between the PCM (A30) and the FTP sensor, then **do the repair verification** .

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Turn the ignition switch to LOCK (0).
- 2. Reconnect all connectors.
- 3. Turn the ignition switch to ON (II).
- 4. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 5. **DO THE PCM IDLE LEARN PROCEDURE** .
- 6. Start the engine, and let it idle.
- 7. Monitor the OBD STATUS for DTC P0452 in the DTCs MENU with the HDS.

DTC Description	OBD STATUS
P0452 FTP SENSOR CIRCUIT LOW VOLTAGE	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED : Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM**

GETtheMANUALS.org

REMOVAL AND INSTALLATION or **PCM UPDATE** . If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED : Go to step 1 and recheck. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then check the OBD STATUS again.

NOT COMPLETED : Keep idling until a result comes on.

DTC P0453: FTP SENSOR CIRCUIT HIGH VOLTAGE

GETtheMANUALS.org

DTC Troubleshooting: P0453

GETtheMANUALS.org

Fig. 196: DTC Troubleshooting Flow Chart (P0453)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0453 FTP SENSOR CIRCUIT HIGH			
VOLTAGE			

1. EVAP system check:
   - 1. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 3. Turn the ignition switch to LOCK (0).
   - 4. Remove the fuel fill cap.
   - 5. Turn the ignition switch to ON (II).
   - 6. Check the parameter(s) below with the HDS.

Signal	Threshold		Current DTC	
	Values	Unit	Values	Unit
FTP SENSOR	More than 4.7	V		

Do the current condition(s) match the threshold?

YES : Go to step 3.

NO : Go to step 2.

2. Problem verification:
   - 1. Install the fuel fill cap.
   - 2. Start the engine. Hold the engine speed at 3, 000 rpm without load (in P or N) until the radiator fan comes on, then let it idle.
   - 3. Monitor the OBD STATUS for DTC P0453 with the HDS.

DTC Description	OBD STATUS
P0453 FTP SENSOR CIRCUIT HIGH VOLTAGE	

Does the HDS indicate FAILED?

YES : Failure is duplicated. Go to step 3.

GETtheMANUALS.org

NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the FTP sensor and the PCM. If the HDS indicates NOT COMPLETED, keep idling until a result comes on.

3. Determine possible failure area (FTP sensor, others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     FTP sensor 3P connector

   - 3. Connect terminals A and B with a jumper wire.

     Terminal A FTP sensor 3P connector No. 1 (GRY)

     Terminal B FTP sensor 3P connector No. 2 (WHT)

Fig. 197: Connecting Wire Between FTP Sensor 3P Connector No. 1 (GRY) And No. 2 (WHT)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

   - 4. Turn the ignition switch to ON (II).
   - 5. Check the parameter(s) below with the HDS.

Signal	Threshold		Current DTC	
	Values	Unit	Values	Unit
FTP SENSOR	More than 4.7	V		

Do the current condition(s) match the threshold?

YES : Go to step 4.

NO : REPLACE THE FTP SENSOR , then **do the repair verification** .

4. Determine possible failure area (PTANK line, SG6 line):
   - 1. Measure the voltage between test points 1 and 2.

GETtheMANUALS.org

Test condition IG ON (II)

FTP sensor 3P connector: disconnected

Test circuit VCC6, SG6

Test point 1 FTP sensor 3P connector No. 1 (GRY)

Test point 2 FTP sensor 3P connector No. 3 (RED)

Fig. 198: Measuring Voltage Between FTP Sensor 3P Connector No. 1 (GRY) And No. 3 (RED)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5.0 V?

YES : Go to step 5.

NO : Go to step 6.

5. Open wire check (PTANK line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connector.

     PCM connector A (49P)

   - 4. Connect terminals A and B with a jumper wire.

     Terminal A FTP sensor 3P connector No. 2 (WHT)

     Terminal B Body ground

GETtheMANUALS.org

Is there continuity?

YES : The SG6 wire is OK. **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

NO : Repair an open in the SG6 wire between the PCM (A10) and the FTP sensor, then **do the repair verification** .

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Turn the ignition switch to LOCK (0).
- 2. Reconnect all connectors.
- 3. Turn the ignition switch to ON (II).
- 4. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 5. **DO THE PCM IDLE LEARN PROCEDURE** .
- 6. Start the engine, and let it idle.
- 7. Monitor the OBD STATUS for DTC P0453 in the DTCs MENU with the HDS.

DTC Description	OBD STATUS
P0453 FTP SENSOR CIRCUIT HIGH VOLTAGE	

Does the HDS indicate PASSED?

PASSED : Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED : Go to step 1 and recheck. If the PCM was updated, **substitute a known-good PCM** See **PCM**

GETtheMANUALS.org

REMOVAL AND INSTALLATION or **PCM UPDATE** , then check the OBD STATUS again.

NOT COMPLETED : Keep idling until a result comes on.

DTC P0455: EVAP SYSTEM LARGE LEAK DETECTED

GETtheMANUALS.org

Fig. 203: DTC Troubleshooting Flow Chart (P0455)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Special Tools Required

GETtheMANUALS.org

Vacuum Pump/Gauge, 0-30 inHg Snap-on YA4000A or equivalent, commercially available

NOTE: **The fuel system is designed to allow specified maximum vacuum and pressure conditions. Do not deviate from the vacuum and pressure tests as indicated in these procedures. Excessive pressure/vacuum would damage the EVAP components or cause eventual fuel tank failure.**

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**
- **Fresh fuel has a higher volatility that will create greater pressure/vacuum. The best condition for testing is less than a full tank of fresh fuel. If possible, to assist in leak detection, add 1 gallon of fresh fuel to the tank (as long as it will not fill the tank), just before starting these procedures.**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0455 EVAP SYSTEM LARGE LEAK DETECTED			

1. Fuel fill cap installation check:
   - 1. Check the fuel fill cap (the cap must say TIGHTEN TO CLICK). It should turn 1/4 turn after it's tight, then it clicks.

   Is the correct fuel fill cap installed and properly tightened?

   YES : Go to step 2.

   NO : Replace the fuel fill cap or tighten the cap, then **do the repair verification** .

2. Fuel fill cap seal and fuel fill pipe matching surface check:
   - 1. Check the fuel fill cap seal (A) and the fuel fill pipe matching surface (B). Verify that the fuel fill cap tether cord (C) is not caught under the cap.

GETtheMANUALS.org

Fig. 204: Identifying Fuel Fill Cap Seal, Cap Tether Cord, Pipe Matching Surface
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is the fuel fill cap seal missing or damaged, is the fuel fill pipe damaged, or is the tether cord caught under the cap?

YES : Replace the fuel fill cap or the fuel fill pipe, then **do the repair verification** .

NO : The fuel fill cap and the fuel fill pipe are OK. Go to step 3.

3. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 3. Select the EVAP TEST in the INSPECTION MENU, and do the FUNCTION TEST with the HDS.

Is the result OK?

YES : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the FTP sensor, the EVAP canister purge valve, the EVAP canister vent shut valve, and the PCM.

NO : The failure is duplicated. Go to step 4.

4. Fuel tank vapor recirculation tube visual check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check for a poor connection or damage at the fuel tank vapor recirculation tube.

Is the tube OK?

YES : The tube is OK. Go to step 5.

GETtheMANUALS.org

NO : Replace the fuel tank vapor recirculation tube, or REPLACE THE FUEL TANK if needed, then **do the repair verification** .

5. Determine possible failure area (EVAP canister vent shut valve, others):
   - 1. Disconnect the fuel tank vapor control valve hose (A) and the fresh air hose (B) from the EVAP canister (C), and plug the EVAP canister ports (D).

Fig. 205: Identifying Fuel Tank Vapor Control Valve Hose, Fresh Air Hose, EVAP Canister And Ports
Courtesy of AMERICAN HONDA MOTOR CO., INC.

   - 2. Disconnect the vacuum hose (engine side) (A) from the EVAP canister purge valve (B) in the engine compartment, then connect a vacuum pump/gauge, 0-30 inHg, to the purge control solenoid valve as shown.

Fig. 206: Identifying EVAP Canister Purge Valve And Vacuum Hose (Engine Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

- 3. Turn the ignition switch to ON (II).
- 4. Select EVAP TEST in the INSPECTION MENU, and do the EVAP PCS ON and EVAP CVS ON in the MULTI SOLENOIDS with the HDS.
- 5. Apply vacuum to the hose until the FTP reads 1.90 V (-0.59 inHg, -15.1 mmHg).

NOTE: **Be careful not to exceed the vacuum. If you do, the FTP sensor can be damaged.**

Signal	Current conditions	
	Values	Unit
FTP SENSOR		

- 6. Do the EVAP PCS OFF and EVAP CVS ON in the MULTI SOLENOIDS with the HDS, then remove the vacuum pump/gauge from the purge control solenoid valve.
- 7. Check the parameter(s) below with the HDS for 1 minute.

Signal	Current conditions	
	Values	Unit
FTP SENSOR		

Does the voltage increase more than 0.2 V (0.1 inHg, 2.5 mmHg)?

YES : Go to step 6.

NO : Go to step 8.

6. EVAP canister purge line leak check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Reconnect the vacuum hose (A) (engine side) to the EVAP canister purge valve.

GETtheMANUALS.org

Fig. 207: Identifying EVAP Canister Purge Valve And Vacuum Hose (Engine Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 3. Disconnect the vacuum hose (EVAP canister side) (B) from the EVAP canister purge valve (C) in the engine compartment, then connect the vacuum pump/gauge to the purge control solenoid valve as shown.
- 4. Turn the ignition switch to ON (II).
- 5. Select EVAP TEST in the INSPECTION MENU, and do the EVAP CVS ON in the SINGLE SOLENOID with the HDS.
- 6. Apply vacuum to the hose until the FTP reads 1.90 V (-0.59 inHg, -15.1 mmHg).

NOTE: **Be careful not to exceed the vacuum. If you do, the FTP sensor can be damaged.**

Signal	Current conditions	
	Values	Unit
FTP SENSOR		

- 7. Check the parameter(s) below with the HDS for 1 minute.

Signal	Current conditions	
	Values	Unit
FTP SENSOR		

Does the voltage increase more than 0.2 V (0.1 inHg, 2.5 mmHg)?

YES : Go to step 7.

NO : The EVAP canister purge line is OK. **REPLACE THE EVAP CANISTER PURGE VALVE** ,

GETtheMANUALS.org

then **do the repair verification** .

7. EVAP canister purge line visual check:
   - 1. Check for a loose or damaged EVAP canister purge line between the EVAP canister and the EVAP canister purge valve. Also check for a leaking EVAP canister.

Are the line and the canister OK?

YES : Replace these parts, then **do the repair verification** .

- FTP sensor O-ring
- EVAP canister vent shut valve case and O-ring
- EVAP canister

NO : Reconnect or repair the EVAP canister purge line, then **do the repair verification** .

8. EVAP canister vent shut valve operation check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Reconnect the fresh air hose (A) from the EVAP canister (B).

Fig. 208: Identifying Air Hose And EVAP Canister
Courtesy of AMERICAN HONDA MOTOR CO., INC.

   - 3. Reconnect the vacuum hose (engine side) to the EVAP canister purge valve.
   - 4. Disconnect the vacuum hose (EVAP canister side) (A) from the EVAP canister purge valve (B) in the engine compartment, then connect the vacuum pump/gauge to the purge control solenoid valve as shown.

GETtheMANUALS.org

Fig. 209: Identifying EVAP Canister Purge Valve And Vacuum Hose (EVAP Canister Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 5. Turn the ignition switch to ON (II).
- 6. Select EVAP TEST in the INSPECTION MENU, and do the EVAP CVS ON in the SINGLE SOLENOID with the HDS.
- 7. Apply vacuum to the hose until the FTP reads 1.90 V (-0.59 inHg, -15.1 mmHg).

NOTE: **Be careful not to exceed the vacuum. If you do, the FTP sensor can be damaged.**

Signal	Current conditions	
	Values	Unit
FTP SENSOR		

- 8. Check the parameter(s) below with the HDS for 1 minute.

Signal	Current conditions	
	Values	Unit
FTP SENSOR		

Does the voltage increase more than 0.2 V (0.1 inHg, 2.5 mmHg)?

YES : **REPLACE THE EVAP CANISTER VENT SHUT VALVE** , then **do the repair verification** .

NO : The EVAP canister vent shut valve is OK. Go to step 9.

9. Fuel fill pipe and fuel vapor return pipe visual check:
   - 1. Do the EVAP CVS OFF in the SINGLE SOLENOID with the HDS.

GETtheMANUALS.org

- 2. Check for looseness or damage at the fuel fill pipe and the fuel vapor return pipe.

Are the parts OK?

YES : The fuel fill pipe and fuel vapor return pipe are OK. Check the fuel tank unit base gasket and the fuel tank, then **do the repair verification** .

NO : Repair or replace the damaged parts, then **do the repair verification** .

REPAIR VERIFICATION

- 1. Turn the ignition switch to LOCK (0).
- 2. Install the parts in the reverse order of removal.
- 3. Turn the ignition switch to ON (II).
- 4. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 5. **DO THE PCM IDLE LEARN PROCEDURE** .
- 6. Do the EVAP FUNCTION TEST with the HDS.

Is the result OK?

YES : Troubleshooting is complete.

NO : Check for poor connections or loose terminals at the FTP sensor, the EVAP canister purge valve, the EVAP canister vent shut valve, and the PCM, then go to step 1.

DTC P0456: EVAP SYSTEM VERY SMALL LEAK DETECTED

GETtheMANUALS.org

DTC Troubleshooting: P0456

Fig. 210: DTC Troubleshooting Flow Chart (P0456)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Special Tools Required

GETtheMANUALS.org

Vacuum Pump/Gauge, 0-30 inHg Snap-on YA4000A or equivalent, commercially available

NOTE: **The fuel system is designed to allow specified maximum vacuum and pressure conditions. Do not deviate from the vacuum and pressure tests as indicated in these procedures. Excessive pressure/vacuum would damage the EVAP components or cause eventual fuel tank failure.**

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**
- **Fresh fuel has a higher volatility that will create greater pressure/vacuum. The best condition for testing is less than a full tank of fresh fuel. If possible, to assist in leak detection, add 1 gallon of fresh fuel to the tank (as long as it will not fill the tank), just before starting these procedures.**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0456 EVAP SYSTEM VERY SMALL LEAK DETECTED			

1. Fuel fill cap installation check:
   - 1. Check the fuel fill cap (the cap must say TIGHTEN TO CLICK). It should turn 1/4 turn after it is tight, then it clicks.

   Is the correct fuel fill cap installed and properly tightened?

   YES : Go to step 2.

   NO : Replace the fuel fill cap or tighten the cap, then **do the repair verification** .

2. Fuel fill cap seal and fuel fill pipe matching surface check:
   - 1. Check the fuel fill cap seal (A) and the fuel fill pipe matching surface (B). Verify that the fuel fill cap tether cord (C) is not caught under the cap.

GETtheMANUALS.org

Fig. 211: Identifying Fuel Fill Cap Seal, Cap Tether Cord, Pipe Matching Surface
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is the fuel fill cap seal missing or damaged, is the fuel fill pipe damaged, or is the tether cord caught under the cap?

YES : Replace the fuel fill cap or the fuel fill pipe, then **do the repair verification** .

NO : The fuel fill cap and the fuel fill pipe are OK. Go to step 3.

3. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 3. Select the EVAP TEST in the INSPECTION MENU, and do the FUNCTION TEST with the HDS.

Is the result OK?

YES : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the FTP sensor, the EVAP canister purge valve, the EVAP canister vent shut valve, and the PCM.

NO : The failure is duplicated. Go to step 4.

4. Fuel tank vapor recirculation tube visual check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check for a poor connection or damage at the fuel tank vapor recirculation tube.

Is the tube OK?

YES : The tube is OK. Go to step 5.

GETtheMANUALS.org

NO : Replace the fuel tank vapor recirculation tube, or REPLACE THE FUEL TANK if needed, then **do the repair verification** .

5. Determine possible failure area (EVAP canister vent shut valve, others):
   - 1. Disconnect the fuel tank vapor control valve hose (A) and the fresh air hose (B) from the EVAP canister (C), and plug the EVAP canister ports (D).

Fig. 212: Identifying Fuel Tank Vapor Control Valve Hose, Fresh Air Hose, EVAP Canister And Ports
Courtesy of AMERICAN HONDA MOTOR CO., INC.

   - 2. Disconnect the vacuum hose (engine side) (A) from the EVAP canister purge valve (B) in the engine compartment, then connect a vacuum pump/gauge, 0-30 inHg, to the purge control solenoid valve as shown.

Fig. 213: Identifying EVAP Canister Purge Valve And Vacuum Hose (Engine Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

- 3. Turn the ignition switch to ON (II).
- 4. Select EVAP TEST in the INSPECTION MENU, and do the EVAP PCS ON and EVAP CVS ON in the MULTI SOLENOIDS with the HDS.
- 5. Apply vacuum to the hose until the FTP reads 1.90 V (-0.59 inHg, -15.1 mmHg).

NOTE: **Be careful not to exceed the vacuum. If you do, the FTP sensor can be damaged.**

Signal	Current conditions	
	Values	Unit
FTP SENSOR		

- 6. Do the EVAP PCS OFF and EVAP CVS ON in the MULTI SOLENOIDS with the HDS, then remove the vacuum pump/gauge from the purge control solenoid valve.
- 7. Check the parameter(s) below with the HDS for 1 minute.

Signal	Current conditions	
	Values	Unit
FTP SENSOR		

Does the voltage increase more than 0.2 V (0.1 inHg, 2.5 mmHg)?

YES : Go to step 6.

NO : Go to step 8.

6. EVAP canister purge line leak check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Reconnect the vacuum hose (A) (engine side) to the EVAP canister purge valve.

GETtheMANUALS.org

Fig. 214: Identifying EVAP Canister Purge Valve And Vacuum Hose (Engine Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 3. Disconnect the vacuum hose (EVAP canister side) (B) from the EVAP canister purge valve (C) in the engine compartment, then connect the vacuum pump/gauge to the purge control solenoid valve as shown.
- 4. Turn the ignition switch to ON (II).
- 5. Select EVAP TEST in the INSPECTION MENU, and do the EVAP CVS ON in the SINGLE SOLENOID with the HDS.
- 6. Apply vacuum to the hose until the FTP reads 1.90 V (-0.59 inHg, -15.1 mmHg).

NOTE: **Be careful not to exceed the vacuum. If you do, the FTP sensor can be damaged.**

YES : **REPLACE THE EVAP CANISTER VENT SHUT VALVE** , then **do the repair verification** .

NO : The EVAP canister vent shut valve is OK. Go to step 9.

9. Fuel fill pipe and fuel vapor return pipe visual check:
   - 1. Do the EVAP CVS OFF in the SINGLE SOLENOID with the HDS.

GETtheMANUALS.org

- 2. Check for looseness or damage at the fuel fill pipe and the fuel vapor return pipe.

Are the parts OK?

YES : The fuel fill pipe and fuel vapor return pipe are OK. Check the fuel tank unit base gasket and the fuel tank, then **do the repair verification** .

NO : Repair or replace the damaged parts, then **do the repair verification** .

REPAIR VERIFICATION

- 1. Turn the ignition switch to LOCK (0).
- 2. Install the parts in the reverse order of removal.
- 3. Turn the ignition switch to ON (II).
- 4. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 5. **DO THE PCM IDLE LEARN PROCEDURE** .
- 6. Do the EVAP FUNCTION TEST with the HDS.

Is the result OK?

YES : Troubleshooting is complete.

NO : Check for poor connections or loose terminals at the FTP sensor, the EVAP canister purge valve, the EVAP canister vent shut valve, and the PCM, then go to step 1.

DTC P0457: EVAP SYSTEM LEAK DETECTED/FUEL FILL CAP LOOSE OR MISSING

GETtheMANUALS.org

DTC Troubleshooting: P0457

Fig. 217: DTC Troubleshooting Flow Chart (P0457)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

GETtheMANUALS.org

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0457 EVAP SYSTEM LEAK DETECTED/FUEL FILL CAP LOOSE OR MISSING			

1. Fuel fill cap installation check:
   - 1. Check the fuel fill cap (the cap must say TIGHTEN TO CLICK). It should turn 1/4 turn after it is tight, then it clicks.

   Is the correct fuel fill cap installed and properly tightened?

   YES : Go to step 2.

   NO : Replace the fuel fill cap or tighten the cap, then **do the repair verification** .

2. Fuel fill cap seal and fuel fill pipe matching surface visual check:
   - 1. Check the fuel fill cap seal (A) and the fuel fill pipe matching surface (B). Verify that the fuel fill cap tether cord (C) is not caught under the cap.

Fig. 218: Identifying Fuel Fill Cap Seal, Cap Tether Cord, Pipe Matching Surface
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is the fuel fill cap seal missing or damaged, is the fuel fill pipe damaged, or is the tether cord caught under the cap?

YES : Replace the fuel fill cap or the fuel fill pipe, then **do the repair verification** .

NO : The fuel fill cap and the fuel fill pipe are OK. Go to step 3.

3. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or

GETtheMANUALS.org

HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .

- 3. Select the EVAP TEST in the INSPECTION MENU, and do the FUNCTION TEST with the HDS.

Is the result OK?

YES : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the FTP sensor, the EVAP canister vent shut valve, and the PCM.

NO : The failure is duplicated. Go to step 4.

4. EVAP canister vent shut valve operation check:
   - 1. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 2. Turn the ignition switch to LOCK (0).
   - 3. **REMOVE THE EVAP CANISTER VENT SHUT VALVE FROM THE EVAP CANISTER** .
   - 4. Connect the 2P connector to the EVAP canister vent shut valve.
   - 5. Turn the ignition switch to ON (II).
   - 6. Select EVAP TEST in the INSPECTION MENU, and do the EVAP CVS ON in the SINGLE SOLENOID with the HDS.
   - 7. Check the EVAP canister vent shut valve (A) operation.

Fig. 219: Identifying EVAP Canister Vent Shut Valve
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Does the valve operate?

YES : The EVAP canister vent shut valve is OK. Go to step 5.

NO : **REPLACE THE EVAP CANISTER VENT SHUT VALVE** , then **do the repair verification** .

5. EVAP canister vent line check:
   - 1. Check the routing of the EVAP canister vent tube.

GETtheMANUALS.org

Is there any damage or blockage?

YES : Remove the blockage and replace the EVAP canister vent tube if needed, then **do the repair verification** .

NO : **DO THE DTC P0455 TROUBLESHOOTING**.

REPAIR VERIFICATION

- 1. Turn the ignition switch to LOCK (0).
- 2. Install the parts in the reverse order of removal.
- 3. Turn the ignition switch to ON (II).
- 4. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 5. **DO THE PCM IDLE LEARN PROCEDURE** .
- 6. Select the EVAP TEST in the INSPECTION MENU, and do the FUNCTION TEST with the HDS.

Is the result OK?

YES : Troubleshooting is complete.

NO : Check for poor connections or loose terminals at the FTP sensor, the EVAP canister vent shut valve, and the PCM, then go to step 1.

DTC P0461: FUEL LEVEL SENSOR (FUEL GAUGE SENDING UNIT) CIRCUIT RANGE/PERFORMANCE PROBLEM

GETtheMANUALS.org

DTC Troubleshooting: P0461

Fig. 220: DTC Troubleshooting Flow Chart (P0461)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**
- **Because it requires 124 miles (200 km) of driving without refueling to complete this diagnosis, DTC P0461 cannot be duplicated during this troubleshooting.**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0461 FUEL LEVEL SENSOR (FUEL GAUGE SENDING UNIT) CIRCUIT RANGE/PERFORMANCE PROBLEM			

1. Fuel gauge sending unit performance check:
   - 1. **TEST THE FUEL GAUGE SENDING UNIT** .

   Is the fuel gauge sending unit OK?

   YES : Check for poor connections or loose terminals at the fuel gauge sending unit and the gauge control module.

   NO : **Replace the fuel gauge sending unit** See FUEL TANK UNIT DISASSEMBLY AND

GETtheMANUALS.org

REASSEMBLY or FUEL TANK UNIT REMOVAL AND INSTALLATION , then **do the repair verification** .

REPAIR VERIFICATION

- 1. Turn the ignition switch to ON (II).
- 2. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 3. **DO THE PCM IDLE LEARN PROCEDURE** .
- 4. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0461 FUEL LEVEL SENSOR (FUEL GAUGE SENDING UNIT) CIRCUIT RANGE/PERFORMANCE PROBLEM			

Are any Pending or Confirmed DTCs indicated?

YES : Go to the indicated DTC's Troubleshooting.

NO : Troubleshooting is complete.

DTC P0462: FUEL LEVEL SENSOR (FUEL GAUGE SENDING UNIT) CIRCUIT LOW VOLTAGE

GETtheMANUALS.org

DTC Troubleshooting: P0462

Fig. 221: DTC Troubleshooting Flow Chart (P0462)

GETtheMANUALS.org

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0462 FUEL LEVEL SENSOR (FUEL GAUGE SENDING UNIT) CIRCUIT LOW VOLTAGE			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 3. Wait 5 seconds.
   - 4. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0462 FUEL LEVEL SENSOR (FUEL GAUGE SENDING UNIT) CIRCUIT LOW VOLTAGE			

Is DTC P0462 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the gauge control module and the fuel gauge sending unit.

2. Fuel gauge sending unit check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Remove the access panel from the floor.
   - 3. Disconnect the following connector. Fuel tank unit 4P connector
   - 4. Turn the ignition switch to ON (II).
   - 5. Wait 5 seconds.
   - 6. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0463 FUEL LEVEL SENSOR CIRCUIT HIGH VOLTAGE			

GETtheMANUALS.org

Is DTC P0463 indicated?

YES : **Replace the fuel gauge sending unit** See FUEL TANK UNIT DISASSEMBLY AND REASSEMBLY or FUEL TANK UNIT REMOVAL AND INSTALLATION , then **do the repair verification** .

NO : The fuel gauge sending unit is OK. Go to step 3.

3. Determine possible failure area (FUEL GAGE+ line, others):
   - 1. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     Fuel tank unit 4P connector: disconnected

     Test circuit FUEL GAGE+

     Test point 1 Fuel tank unit 4P connector No. 2 (YEL)

     Test point 2 Body ground

Fig. 222: Measuring Voltage Between Fuel Tank Unit 4P Connector No. 2 (YEL) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : Go to step 5.

NO : Go to step 4.

4. Shorted wire check (FUEL GAGE+ line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. **Remove the gauge control module** See **GAUGE CONTROL MODULE REMOVAL AND INSTALLATION** or Rewriting the ODO Data and Transferring the Maintenance Minder™ Data to a New Gauge Control Module.
   - 3. Disconnect the following connector.

GETtheMANUALS.org

Gauge control module 32P connector

- 4. Check for continuity between test points 1 and 2.

  Test condition IG LOCK (0)

  Fuel tank unit 4P connector: disconnected

  Gauge control module 32P connector: disconnected

  Test circuit FUEL GAGE+

  Test point 1 Fuel tank unit 4P connector No. 2 (YEL)

  Test point 2 Body ground

Fig. 223: Checking Continuity Between Fuel Tank Unit 4P Connector No. 2 (YEL) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short in the FUEL GAGE+ wire between the gauge control module and the fuel tank unit, then **do the repair verification** .

NO : The FUEL GAGE+ wire is OK. **Replace the gauge control module** See **GAUGE CONTROL MODULE REMOVAL AND INSTALLATION** or Rewriting the ODO Data and Transferring the Maintenance Minder™ Data to a New Gauge Control Module, then **do the repair verification** .

5. Gauge control module check:
   - 1. Reconnect the following connector.

     Gauge control module 32P connector

   - 2. **Remove the fuel tank unit** See FUEL TANK UNIT DISASSEMBLY AND REASSEMBLY or FUEL TANK UNIT REMOVAL AND INSTALLATION .
   - 3. Connect the following connector.

GETtheMANUALS.org

Fuel tank unit 4P connector

- 4. Turn the ignition switch to ON (II).
- 5. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 6. Set the float (A) to the E position.

Fig. 224: Identifying Distance Between Float At E Position To Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 7. Check the fuel gauge.

Does the gauge move to the empty position?

YES : The gauge control module is OK. **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

NO : **Replace the gauge control module** See **GAUGE CONTROL MODULE REMOVAL AND INSTALLATION** or Rewriting the ODO Data and Transferring the Maintenance Minder™ Data to a New Gauge Control Module, then **do the repair verification** .

REPAIR VERIFICATION

- 1. Turn the ignition switch to LOCK (0).
- 2. Reinstall all removed parts in the reverse order of removal.
- 3. Turn the ignition switch to ON (II).
- 4. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 5. **DO THE PCM IDLE LEARN PROCEDURE** .
- 6. Check for Pending or Confirmed DTCs with the HDS.

GETtheMANUALS.org

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0462 FUEL LEVEL SENSOR (FUEL GAUGE SENDING UNIT) CIRCUIT LOW VOLTAGE			

Is DTC P0462 indicated?

YES : Check for poor connections or loose terminals at the gauge control module and the fuel gauge sending unit. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then recheck. If the PCM was substituted, go to step 1.

NO : Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

DTC P0463: FUEL LEVEL SENSOR (FUEL GAUGE SENDING UNIT) CIRCUIT HIGH VOLTAGE

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

Is there continuity?

YES : The FUEL GAGE- wire is OK. Go to step 4.

NO : Repair an open in the FUEL GAGE- wire between the gauge control module and the fuel tank unit, then **do the repair verification** .

4. Open wire check (FUEL GAGE+ line):
   - 1. Connect terminals A and B with a jumper wire.

     Terminal A Fuel tank unit 4P connector No. 2 (YEL)

     Terminal B Body ground

Fig. 228: Connecting Wire Between Fuel Tank Unit 4P Connector No. 2 (YEL) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

   - 2. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Fuel tank unit 4P connector: disconnected

GETtheMANUALS.org

Fuel tank unit 4P connector No. 2: jumped to body ground

Gauge control module 32P connector: disconnected

Test circuit FUEL GAGE+

Test point 1 Gauge control module 32P connector No. 22 (BLU)

Test point 2 Body ground

Fig. 229: Checking Continuity Between Gauge Control Module 32P Connector No. 22 (BLU) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The FUEL GAGE+ wire is OK. Go to step 5.

NO : Repair an open in the FUEL GAGE+ wire between the gauge control module and the fuel tank unit, then **do the repair verification** .

5. Fuel gauge sending unit performance check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Remove the jumper wire from the fuel tank unit 4P connector.
   - 3. **Remove the fuel tank unit** See FUEL TANK UNIT REMOVAL AND INSTALLATION or FUEL TANK UNIT DISASSEMBLY AND REASSEMBLY .
   - 4. **TEST THE FUEL GAUGE SENDING UNIT** .

Is the fuel gauge sending unit OK?

YES : The fuel gauge sending unit is OK. Go to step 6.

NO : Replace the fuel gauge sending unit, then **do the repair verification** .

6. Gauge control module check:
   - 1. Connect the following connectors.

GETtheMANUALS.org

Fuel tank unit 4P connector

Gauge control module 32P connector

- 2. Turn the ignition switch to ON (II).
- 3. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 4. Set the float (A) to the F position.

Fig. 230: Identifying Distance Between Float At F Position To Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 5. Check the fuel gauge.

Does the gauge move to the full position?

YES : The gauge control module is OK. **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

NO : **Replace the gauge control module** See **GAUGE CONTROL MODULE REMOVAL AND INSTALLATION** or Rewriting the ODO Data and Transferring the Maintenance Minder™ Data to a New Gauge Control Module, then **do the repair verification** .

REPAIR VERIFICATION

- 1. Turn the ignition switch to LOCK (0).
- 2. Reinstall all removed parts in the reverse order of removal.
- 3. Turn the ignition switch to ON (II).
- 4. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 5. **DO THE PCM IDLE LEARN PROCEDURE** .

GETtheMANUALS.org

- 6. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0463 FUEL LEVEL SENSOR (FUEL GAUGE SENDING UNIT) CIRCUIT HIGH VOLTAGE			

Is DTC P0463 indicated?

YES : Check for poor connections or loose terminals at the gauge control module and the fuel gauge sending unit. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then recheck. If the PCM was substituted, go to step 1.

NO : Troubleshooting is complete. If the PCM was substituted, **REPLACE THE ORIGINAL PCM** . If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

DTC P0496: EVAP SYSTEM HIGH PURGE FLOW DETECTED

Fig. 231: DTC Troubleshooting Flow Chart (P0496)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

Special Tools Required

- **Vacuum Pump/Gauge, 0-30 inHg Snap-on YA4000A or equivalent, commercially available**
- **Vacuum/Pressure Gauge, 0-4 inHg 07JAZ-001000B**

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0496 EVAP SYSTEM HIGH PURGE FLOW DETECTED			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 3. Select the EVAP TEST in the INSPECTION MENU, and do the FUNCTION TEST with the HDS.

   NOTE: **If the test could not be completed because of another DTC, do the troubleshooting for that DTC.**

   Is the result OK?

   YES : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the FTP sensor, the EVAP canister purge valve, the EVAP canister vent shut valve, and the PCM.

   NO : Go to step 2.

2. EVAP canister purge valve open stuck check:
   - 1. Select EVAP TEST in the INSPECTION MENU, and do the EVAP PCS OFF in the SINGLE SOLENOID with the HDS.
   - 2. Disconnect the vacuum hose (A) from the EVAP canister purge valve (B). Connect a T-fitting (C), a vacuum gauge, and a vacuum pump/gauge, 0-30 inHg, to the EVAP canister purge valve as shown.

GETtheMANUALS.org

Fig. 232: Connecting T-Fitting, Vacuum Gauge And Vacuum Pump/Gauge To EVAP Canister Purge Valve
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 3. Apply about 2 kPa (0.6 inHg, 15 mmHg) of vacuum to the purge control solenoid valve.
- 4. Do the EVAP PCS ON in the SINGLE SOLENOID with the HDS.

Does the vacuum release immediately?

YES : **REPLACE THE EVAP CANISTER VENT SHUT VALVE** , then **do the repair verification** .

NO : **REPLACE THE EVAP CANISTER PURGE VALVE** , then **do the repair verification** .

REPAIR VERIFICATION

- 1. Turn the ignition switch to ON (II).
- 2. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 3. **DO THE PCM IDLE LEARN PROCEDURE** .
- 4. Select the EVAP TEST in the INSPECTION MENU, and do the FUNCTION TEST with the HDS.

Is the result OK?

YES : Troubleshooting is complete.

GETtheMANUALS.org

NO : Check for poor connections or loose terminals at the FTP sensor, the EVAP canister purge valve, the EVAP canister vent shut valve, and the PCM. then go to step 1.

DTC P0497: EVAP SYSTEM LOW PURGE FLOW DETECTED

GETtheMANUALS.org

Fig. 233: DTC Troubleshooting Flow Chart (P0497)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Special Tools Required

- **Vacuum Pump/Gauge, 0-30 inHg Snap-on YA4000A or equivalent, commercially available**
- **Vacuum/Pressure Gauge, 0-4 inHg 07JAZ-001000B**

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0497 EVAP SYSTEM LOW PURGE FLOW DETECTED			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 3. Select the EVAP TEST in the INSPECTION MENU, and do the FUNCTION TEST with the HDS.

   Is the result OK?

   YES : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the FTP sensor, the EVAP canister purge valve, the EVAP canister vent shut valve, and the PCM.

   NO : The failure is duplicated. Go to step 2.

2. EVAP canister purge line visual check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check for a poor connection, a blockage, or damage at the EVAP canister purge line between throttle body and the EVAP canister.

   Is the line OK?

   YES : Go to step 3.

   NO : Reconnect or repair the EVAP canister purge line, then **do the repair verification** .

3. Determine possible failure area (EVAP canister purge valve or purge line (EVAP canister side), others):
   - 1. Disconnect the vacuum hose (A) from the EVAP canister purge valve (B).

GETtheMANUALS.org

Fig. 234: Identifying Vacuum Hose And EVAP Canister Purge Valve
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 2. Disconnect the vacuum hose (A) from the purge line (at the EVAP canister side), then connect a T-fitting (B), a vacuum gauge, and a vacuum pump/gauge, 0-30 inHg, to the hose as shown.

Fig. 235: Connecting T-Fitting, Vacuum Gauge And Vacuum Pump/Gauge To Hose
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 3. Turn the ignition switch to ON (II).

GETtheMANUALS.org

- 4. Apply about 2 kPa (0.6 inHg, 15 mmHg) of vacuum to the hose.
- 5. Select EVAP TEST in the INSPECTION MENU, and do the EVAP PCS ON in the SINGLE SOLENOID with the HDS.

Does the vacuum release immediately?

YES : Go to step 5.

NO : Go to step 4.

4. EVAP canister purge valve check:
   - 1. Do the EVAP PCS OFF in the SINGLE SOLENOID with the HDS.
   - 2. Disconnect the vacuum hose (A) from the EVAP canister purge valve (B). Connect the T-fitting (C), the vacuum gauge, and the vacuum pump/gauge to the EVAP canister purge valve as shown.

Fig. 236: Connecting T-Fitting, Vacuum Gauge And Vacuum Pump/Gauge To EVAP Canister Purge Valve
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 3. Apply about 2 kPa (0.6 inHg, 15 mmHg) of vacuum to the purge control solenoid valve.
- 4. Do the EVAP PCS ON in the SINGLE SOLENOID with the HDS.

GETtheMANUALS.org

Does the vacuum release immediately?

YES : The EVAP canister purge valve is OK. Check for a blockage in the purge line between the EVAP canister purge valve and the EVAP canister, then **do the repair verification** .

NO : **REPLACE THE EVAP CANISTER PURGE VALVE** , then **do the repair verification** .

5. EVAP canister purge line (engine side) check:
    - 1. Connect the vacuum pump/gauge to the vacuum hose (A) as shown.

Fig. 237: Identifying Vacuum Hose
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    - 2. Start the engine, and let it idle.

Is there vacuum?

YES : The purge line (engine side) is OK. Go to step 6.

NO : Check for a blockage in the purge line between the EVAP canister purge valve and the intake manifold, then **do the repair verification** .

6. FTP sensor performance check:
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Remove the FTP sensor with its connector connected.
    - 3. Connect the T-fitting (A), the vacuum pump/gauge, and the vacuum pump to the FTP sensor (B) as shown.

GETtheMANUALS.org

Fig. 238: Connecting T-Fitting, Vacuum Gauge And Vacuum Pump/Gauge To FTP Sensor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 4. Turn the ignition switch to ON (II).
- 5. Check and record the FTP SENSOR reading in the DATA LIST with the HDS.

Signal	Current conditions	
	Values	Unit
FTP SENSOR		

- 6. Slowly apply about 1.3 kPa (0.4 inHg, 10 mmHg) of vacuum to the hose.

NOTE: **Be careful not to exceed the vacuum. If you do, the FTP sensor can be damaged.**

- 7. Check the FTP SENSOR in the DATA LIST with the HDS.

Signal	Current conditions	
	Values	Unit
FTP SENSOR		

Does the value change?

YES : The FTP sensor is OK. Check for a blockage at the EVAP canister port, then **do the repair verification** .

NO : REPLACE THE FTP SENSOR , then **do the repair verification** .

GETtheMANUALS.org

REPAIR VERIFICATION

- 1. Turn the ignition switch to LOCK (0).
- 2. Install the parts in the reverse order of removal.
- 3. Turn the ignition switch to ON (II).
- 4. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 5. **DO THE PCM IDLE LEARN PROCEDURE** .
- 6. Select the EVAP TEST in the INSPECTION MENU, and do the FUNCTION TEST with the HDS.

Is the result OK?

YES : Troubleshooting is complete.

NO : Check for poor connections or loose terminals at the FTP sensor, the EVAP canister purge valve, the EVAP canister vent shut valve, and the PCM, then go to step 1.

DTC P0498: EVAP CANISTER VENT SHUT VALVE CIRCUIT LOW VOLTAGE

GETtheMANUALS.org

DTC Troubleshooting: P0498

Fig. 239: DTC Troubleshooting Flow Chart (P0498)

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0498 EVAP CANISTER VENT SHUT VALVE CIRCUIT LOW VOLTAGE			

1. EVAP system check:
   - 1. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 3. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0498 EVAP CANISTER VENT SHUT VALVE CIRCUIT LOW VOLTAGE			

Is DTC P0498 indicated?

YES : Go to step 3.

NO : Go to step 2.

2. Problem verification:
   - 1. Select EVAP TEST in the INSPECTION MENU, and do the EVAP CVS ON in the SINGLE SOLENOID with the HDS.
   - 2. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0498 EVAP CANISTER VENT SHUT VALVE CIRCUIT LOW VOLTAGE			

Is DTC P0498 indicated?

YES : The failure is duplicated. Go to step 3.

NO : The EVAP system is OK. Intermittent failure, the system is OK at this time. Check for poor

GETtheMANUALS.org

connections or loose terminals at the EVAP canister vent shut valve and the PCM.

3. Open wire check (FI SUB RLY OUT line):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Disconnect the following connector.

      EVAP canister vent shut valve 2P connector

    - 3. Turn the ignition switch to ON (II).
    - 4. Measure the voltage between test points 1 and 2.

      Test condition IG ON (II)

      EVAP canister vent shut valve 2P connector: disconnected

      Test circuit FI SUB RLY OUT

      Test point 1 EVAP canister vent shut valve 2P connector No. 1 (GRN)

      Test point 2 Body ground

Fig. 240: Measuring Voltage Between EVAP Canister Vent Shut Valve 2P Connector No. 1 (GRN) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The FI SUB RLY OUT wire is OK. Go to step 4.

NO : Repair an open in the FI SUB RLY OUT wire between the EVAP canister vent shut valve and the PGM-FI subrelay, then **do the repair verification** .

4. EVAP canister purge valve internal resistance check:
    - 1. Turn the ignition switch to LOCK (0).
    - 2. At the vent shut valve side, measure the resistance between test points 1 and 2.

      Test condition IG LOCK (0)

GETtheMANUALS.org

EVAP canister vent shut valve 2P connector: disconnected

Test circuit VSV, FI SUB RLY OUT

Test point 1 EVAP canister vent shut valve 2P connector No. 1 (EVAP canister vent shut valve side)

Test point 2 EVAP canister vent shut valve 2P connector No. 2 (EVAP canister vent shut valve side)

Fig. 241: Measuring Resistance Between EVAP Canister Vent Shut Valve 2P Connector No. 1 And No. 2 (EVAP Canister Vent Shut Valve Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 25 -30 ohms at room temperature?

YES : The EVAP canister vent shut valve is OK. Go to step 5.

NO : **REPLACE THE EVAP CANISTER VENT SHUT VALVE** , then **do the repair verification** .

5. Shorted wire check (VSV line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connector.

     PCM connector A (49P)

   - 4. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     EVAP canister vent shut valve 2P connector: disconnected

     PCM connector A (49P): disconnected

     Test circuit VSV

     Test point 1 PCM connector A (49P) No. 32 (GRY)

GETtheMANUALS.org

Test point 2 Body ground

Fig. 242: Checking Continuity Between PCM Connector A (49P) No. 32 (GRY) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short in the VSV wire between the EVAP canister vent shut valve and the PCM (A32), then **do the repair verification** .

NO : The VSV wire is not shorted. Go to step 6.

6. Open wire check (VSV line):
   - 1. Connect terminals A and B with a jumper wire.

     Terminal A EVAP canister vent shut valve 2P connector No. 2 (GRY)

     Terminal B Body ground

Fig. 243: Identifying EVAP Canister Vent Shut Valve 2P Connector Terminals

Test point 2 Body ground

Fig. 244: Checking Continuity Between PCM Connector A (49P) No. 32 (GRY) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The VSV wire is OK. **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM UPDATE** or **PCM REMOVAL AND INSTALLATION** , then **do the repair verification** .

NO : Repair an open in the VSV wire between the EVAP canister vent shut valve and the PCM (A32), then **do the repair verification** .

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Turn the ignition switch to LOCK (0).
- 2. Reconnect all connectors.
- 3. Turn the ignition switch to ON (II).
- 4. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 5. **DO THE PCM IDLE LEARN PROCEDURE** .
- 6. Select EVAP TEST in the INSPECTION MENU, and do the EVAP CVS ON in the SINGLE SOLENOID with the HDS.

GETtheMANUALS.org

- 7. Monitor the OBD STATUS for DTC P0498 in the DTCs MENU with the HDS.

DTC Description	OBD STATUS
P0498 EVAP CANISTER VENT SHUT VALVE CIRCUIT LOW VOLTAGE	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED : Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

FAILED : Go to step 1 and recheck. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then check the OBD STATUS again.

NOT COMPLETED : Meet the test condition, and check the OBD STATUS again.

DTC P0499: EVAP CANISTER VENT SHUT VALVE CIRCUIT HIGH VOLTAGE

Fig. 245: DTC Troubleshooting Flow Chart (P0499)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS**

GETtheMANUALS.org

SYSTEMS .

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0499 EVAP CANISTER VENT SHUT VALVE CIRCUIT HIGH VOLTAGE			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 3. Select EVAP TEST in the INSPECTION MENU, and do the EVAP CVS ON in the SINGLE SOLENOID with the HDS.
   - 4. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0499 EVAP CANISTER VENT SHUT VALVE CIRCUIT HIGH VOLTAGE			

Is DTC P0499 indicated?

YES : Failure is duplicated. **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

NO : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the EVAP canister vent shut valve and the PCM.

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Turn the ignition switch to ON (II).
- 2. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 3. **DO THE PCM IDLE LEARN PROCEDURE** .
- 4. Select EVAP TEST in the INSPECTION MENU, and do the EVAP CVS ON in the SINGLE SOLENOID with the HDS.
- 5. Monitor the OBD STATUS for DTC P0499 in the DTCs MENU with the HDS.

DTC Description	OBD STATUS
P0499 EVAP CANISTER VENT SHUT VALVE CIRCUIT HIGH VOLTAGE	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

GETtheMANUALS.org

PASSED : Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM UPDATE** or **PCM REMOVAL AND INSTALLATION** . If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

FAILED : Go to step 1 and recheck. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then check the OBD STATUS again.

NOT COMPLETED : Meet the test condition, and check the OBD STATUS again.

DTC P0506: IDLE CONTROL SYSTEM RPM LOWER THAN EXPECTED

GETtheMANUALS.org

DTC Troubleshooting: P0506

Fig. 246: DTC Troubleshooting Flow Chart (P0506)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

GETtheMANUALS.org

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0506 IDLE CONTROL SYSTEM RPM LOWER THAN EXPECTED			

1. Problem verification:
   - 3. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 3. Start the engine. Hold the engine speed at 3, 000 rpm without load (in P or N) until the radiator fan comes on, then let it idle at least 20 seconds.
   - 4. Check for these conditions in the DATA LIST with the HDS:
     - ECT SENSOR 1 above 158 °F (70 °C)
     - IAT SENSOR above 32 °F (0 °C)
     - VEHICLE SPEED is 0 mph (0 km/h)
     - ST FUEL TRIM between 0.69 and 1.47
     - FSS is CLOSED

Signal	Current conditions	
	Values	Unit
ECT SENSOR 1		
IAT SENSOR (2)		
VEHICLE SPEED		
AF FB (ST FUEL TRIM)		
FSS		

   - 5. Monitor the OBD STATUS for DTC P0506 in the DTCs MENU with the HDS.

DTC Description	OBD STATUS
P0506 IDLE CONTROL SYSTEM RPM LOWER THAN EXPECTED	

Does the HDS indicate FAILED?

YES : The failure is duplicated. Go to step 2.

NO : If the HDS indicates PASSED, go to step 1. If the HDS indicates EXECUTING, keep idling until a result comes on. If the HDS indicates OUT OF CONDITION, meet the test condition and recheck.

2. Throttle body visual check:
   - 1. **Remove the intake air duct from the throttle body** See **THROTTLE BODY DISASSEMBLY AND REASSEMBLY** , **THROTTLE BODY REMOVAL AND INSTALLATION** or **THROTTLE BODY CLEANING** .

GETtheMANUALS.org

- 2. Check for dirt, carbon, or damage in the throttle bore.

Is there dirt, carbon, or damage in the throttle bore?

YES : If there is dirt or carbon, **clean the throttle body** See **THROTTLE BODY DISASSEMBLY AND REASSEMBLY** , **THROTTLE BODY REMOVAL AND INSTALLATION** or **THROTTLE BODY CLEANING** . Also check for damage to the air cleaner element, then **do the repair verification** . If there is damage in the throttle bore, **replace the throttle body** See **THROTTLE BODY DISASSEMBLY AND REASSEMBLY** , **THROTTLE BODY REMOVAL AND INSTALLATION** or **THROTTLE BODY CLEANING** , then **do the repair verification** .

NO : The throttle body is OK. Check the A/C system, then go to step 4.

3. Throttle body visual check:
   - 1. **Remove the intake air duct from the throttle body** See **THROTTLE BODY DISASSEMBLY AND REASSEMBLY** , **THROTTLE BODY REMOVAL AND INSTALLATION** or **THROTTLE BODY CLEANING** .
   - 2. Check for dirt, carbon, or damage in the throttle bore.

Is there dirt, carbon, or damage in the throttle bore?

YES : If there is dirt or carbon, **clean the throttle body** See **THROTTLE BODY DISASSEMBLY AND REASSEMBLY** or **THROTTLE BODY REMOVAL AND INSTALLATION** or **THROTTLE BODY CLEANING** . Also check for damage to the air cleaner element, then **do the repair verification** . If there is damage in the throttle bore, **replace the throttle body** See **THROTTLE BODY DISASSEMBLY AND REASSEMBLY** , **THROTTLE BODY REMOVAL AND INSTALLATION** or **THROTTLE BODY CLEANING** , then **do the repair verification** .

NO : The throttle body is OK. Go to step 4.

4. Idle control system check:
   - 1. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 3. Start the engine. Hold the engine speed at 3, 000 rpm without load (in P or N) until the radiator fan comes on, then let it idle at least 20 seconds.
   - 4. Check for these conditions in the DATA LIST with the HDS:
     - ECT SENSOR 1 above 158 °F (70 °C)
     - IAT SENSOR above 32 °F (0 °C)
     - VEHICLE SPEED is 0 mph (0 km/h)
     - ST FUEL TRIM between 0.69 and 1.47
     - FSS is CLOSED

	Current conditions	

GETtheMANUALS.org

Signal	Values	Unit
ECT SENSOR 1		
IAT SENSOR (2)		
VEHICLE SPEED		
AF FB (ST FUEL TRIM)		
FSS		

NOTE: **Recheck with different load conditions (turn on the headlights, the blower motor, the rear window defogger, and/or the A/C, change the gear position, etc.).**

- 5. Monitor the OBD STATUS for DTC P0506 in the DTCs MENU with the HDS.

DTC Description	OBD STATUS
P0506 IDLE CONTROL SYSTEM RPM LOWER THAN EXPECTED	

Does the HDS indicate PASSED?

YES : Intermittent failure, the system is OK at this time.

NO : If the HDS indicates FAILED, check the A/C system, then go to step 1 and recheck. If the HDS indicates EXECUTING, keep idling until a result comes on. If the HDS indicates OUT OF CONDITION, meet the test condition and recheck.

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Turn the ignition switch to LOCK (0).
- 2. Reconnect all connectors.
- 3. Turn the ignition switch to ON (II).
- 4. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 5. **DO THE PCM IDLE LEARN PROCEDURE** .
- 6. Start the engine. Hold the engine speed at 3, 000 rpm without load (in P or N) until the radiator fan comes on, then let it idle at least 20 seconds.
- 7. Check for these conditions in the DATA LIST with the HDS:
  - ECT SENSOR 1 above 158 °F (70 °C)
  - IAT SENSOR above 32 °F (0 °C)
  - VEHICLE SPEED is 0 mph (0 km/h)
  - ST FUEL TRIM between 0.69 and 1.47
  - FSS is CLOSED

Signal	Current conditions	

GETtheMANUALS.org

	Values	Unit
ECT SENSOR 1		
IAT SENSOR (2)		
VEHICLE SPEED		
AF FB (ST FUEL TRIM)		
FSS		

- 8. Monitor the OBD STATUS for DTC P0506 in the DTCs MENU with the HDS.

DTC Description	OBD STATUS
P0506 IDLE CONTROL SYSTEM RPM LOWER THAN EXPECTED	

Does the HDS indicate PASSED, FAILED, EXECUTING, or OUT OF CONDITION?

PASSED : Troubleshooting is complete. If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED : Go to step 1 and recheck.

EXECUTING : Keep idling until a result comes on.

OUT OF CONDITION : Meet the test condition, and check the OBD STATUS again.

DTC P0507: IDLE CONTROL SYSTEM RPM HIGHER THAN EXPECTED

GETtheMANUALS.org

DTC Troubleshooting: P0507

Fig. 247: DTC Troubleshooting Flow Chart (P0507)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0507 IDLE CONTROL SYSTEM RPM HIGHER THAN EXPECTED			

1. Problem verification:

GETtheMANUALS.org

- 1. Turn the ignition switch to ON (II).
- 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 3. Start the engine. Hold the engine speed at 3, 000 rpm without load (in P or N) until the radiator fan comes on, then let it idle at least 20 seconds.
- 4. Monitor the OBD STATUS for DTC P0507 with the HDS.

DTC Description	OBD STATUS
P0507 IDLE CONTROL SYSTEM RPM HIGHER THAN EXPECTED	

Does the HDS indicate FAILED?

YES : The failure is duplicated. Go to step 2.

NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time. If the HDS indicates EXECUTING, keep idling until a result comes on. If the HDS indicates OUT OF CONDITION, recheck with different load conditions (electrical, A/C, gear position, etc.).

2. Vacuum leak check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check for vacuum leaks at these parts:
     - PCV valve
     - PCV hose
     - EVAP canister purge valve
     - Throttle body
     - Intake manifold
     - Brake booster and hose

Are there any leaks?

YES : Repair or replace the leaking part(s), then **do the repair verification** .

NO : Recheck with different load conditions (turn on the headlights, blower motor, or A/C; change the gear position, etc.), then **do the repair verification** .

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Turn the ignition switch to ON (II).
- 2. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 3. **DO THE PCM IDLE LEARN PROCEDURE** .
- 4. Start the engine. Hold the engine speed at 3, 000 rpm without load (in P or N) until the radiator fan comes on, then let it idle at least 20 seconds.

GETtheMANUALS.org

DTC Description	OBD STATUS
P0507 IDLE CONTROL SYSTEM RPM HIGHER THAN EXPECTED	

Does the HDS indicate PASSED, FAILED, EXECUTING, or OUT OF CONDITION?

PASSED : Troubleshooting is complete. If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

FAILED : Go to step 1 and recheck.

EXECUTING : Keep the test condition until a result comes on.

OUT OF CONDITION : Meet the test condition, and check the OBD STATUS again.

DTC P050A: COLD START IDLE AIR CONTROL SYSTEM PERFORMANCE PROBLEM

GETtheMANUALS.org

DTC Troubleshooting: P050A

Fig. 248: DTC Troubleshooting Flow Chart (P050A)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and**

GETtheMANUALS.org

review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P050A COLD START IDLE AIR CONTROL SYSTEM PERFORMANCE PROBLEM			

1. PGM-FI system check:
   - 1. Turn the ignition switch to ON (II).
   - 2. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame

Are any Pending or Confirmed DTCs other than P050A indicated?

YES : Go to the indicated DTC's troubleshooting.

NO : Go to step 2.

2. Intake air duct visual check:
   - 1. Check for a poor connection or blockage at the intake air duct.

Is it OK?

YES : Go to step 3.

NO : Reconnect or repair the intake air duct, then **do the repair verification** .

3. Air cleaner housing visual check:
   - 1. Check for a poor connection or blockage at the air cleaner housing.

Is it OK?

YES : Go to step 4.

NO : **REPLACE THE AIR CLEANER HOUSING** , then **do the repair verification** .

4. Air cleaner element visual check:
   - 1. Check for dirt or debris on the air cleaner element.

Is it dirty?

GETtheMANUALS.org

YES : **REPLACE THE AIR CLEANER ELEMENT** , then **do the repair verification** .

NO : Go to step 5.

5. Problem verification:
   - 1. Let the engine cool until the value of ECT SENSOR 1 is 122 °F (50 °C) or less.

Signal	Current conditions	
	Values	Unit
ECT SENSOR 1		

   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 3. Start the engine, and let it idle for 10 seconds or more.
   - 4. Monitor the OBD STATUS for DTC P050A with the HDS.

DTC Description	OBD STATUS
P050A COLD START IDLE AIR CONTROL SYSTEM PERFORMANCE PROBLEM	

Does the HDS indicate FAILED?

YES : The failure is duplicated. Go to step 6.

NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the throttle body, the MAF sensor/IAT sensor, and the PCM. If the HDS indicates EXECUTING, keep idling until a result comes on. If the HDS indicates OUT OF CONDITION, go to step 1. and recheck.

6. Throttle body test:
   - 1. Do the ETCS TEST with the HDS.

Is the THROTTLE ACTUATOR CONTROL VALVE normal?

YES : Go to step 7.

NO : **Replace the throttle body** See **THROTTLE BODY DISASSEMBLY AND REASSEMBLY** , **THROTTLE BODY REMOVAL AND INSTALLATION** or **THROTTLE BODY CLEANING** , then **do the repair verification** .

7. MAF sensor performance check:
   - 1. Start the engine. Hold the engine speed at 3, 000 rpm without load (in P or N) until the radiator fan comes on, then let it idle.
   - 2. While holding the engine speed at 2, 500 rpm for 30 seconds, check the parameter(s) below with

GETtheMANUALS.org

the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
MAF SENSOR	7.0-8.6	g/s		

Do the current condition(s) match the threshold?

YES : The MAF sensor is OK. Go to step 8.

NO : **REPLACE THE MAF SENSOR/IAT SENSOR** , then **do the repair verification** .

8. IAT sensor performance check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Allow the engine to cool to ambient temperature.
   - 3. Note the ambient temperature.
   - 4. Turn the ignition switch to ON (II).
   - 5. Quickly note the value of the IAT SENSOR in the DATA LIST with the HDS.

Signal	Current conditions	
	Values	Unit
IAT SENSOR		

   - 6. Compare the value of the IAT SENSOR with the ambient temperature.

Does the value of the IAT SENSOR differ 5.4 °F (3 °C) or more from the ambient temperature?

YES : **REPLACE THE MAF SENSOR/IAT SENSOR** , then **do the repair verification** .

NO : The IAT sensor is OK. Check for dirt, carbon, or damage in the throttle bore. If there is dirt or carbon, **clean the throttle body** See **THROTTLE BODY DISASSEMBLY AND REASSEMBLY** or **THROTTLE BODY REMOVAL AND INSTALLATION** or **THROTTLE BODY CLEANING** , then **do the repair verification** . If there is damage in the throttle bore, **replace the throttle body** See **THROTTLE BODY DISASSEMBLY AND REASSEMBLY** , **THROTTLE BODY REMOVAL AND INSTALLATION** or **THROTTLE BODY CLEANING** , then **do the repair verification** .

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Turn the ignition switch to LOCK (0).
- 2. Reconnect all connectors.
- 3. Turn the ignition switch to ON (II).
- 4. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 5. **DO THE PCM IDLE LEARN PROCEDURE** .

GETtheMANUALS.org

- 6. Let the engine cool until the value of ECT SENSOR 1 is 122 °F (50 °C) or less.

Signal	Current conditions	
	Values	Unit
ECT SENSOR 1		

- 7. Start the engine, and let it idle for 10 seconds or more.
- 8. Monitor the OBD STATUS for DTC P050A in the DTCs MENU with the HDS.

DTC Description	OBD STATUS
P050A COLD START IDLE AIR CONTROL SYSTEM PERFORMANCE PROBLEM	

Does the HDS indicate PASSED, FAILED, EXECUTING, or OUT OF CONDITION?

PASSED : Troubleshooting is complete. If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED : Go to step 1 and recheck.

EXECUTING : Keep the test condition until a result comes on.

OUT OF CONDITION : Meet the test condition, and check the OBD STATUS again.

DTC P050B: COLD START IGNITION TIMING CONTROL SYSTEM PERFORMANCE PROBLEM

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and**

GETtheMANUALS.org

review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P050B COLD START IGNITION TIMING CONTROL SYSTEM PERFORMANCE PROBLEM			

1. PGM-FI system check:
   - 1. Turn the ignition switch to ON (II).
   - 2. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame

Are any Pending or Confirmed DTCs other than P050B indicated?

YES : Go to the indicated DTC's troubleshooting.

NO : Go to step 2.

2. Intake air duct visual check:
   - 1. Check for a poor connection or blockage at the intake air duct.

Is it OK?

YES : Go to step 3.

NO : Reconnect or repair the intake air duct, then **do the repair verification** .

3. Air cleaner housing visual check:
   - 1. Check for a poor connection or blockage at the air cleaner housing.

Is it OK?

YES : Go to step 4.

NO : **REPLACE THE AIR CLEANER HOUSING** , then **do the repair verification** .

4. Air cleaner element visual check:
   - 1. Check for dirt or debris on the air cleaner element.

Is it dirty?

GETtheMANUALS.org

YES : **REPLACE THE AIR CLEANER ELEMENT** , then **do the repair verification** .

NO : Go to step 5.

5. Problem verification:
   - 1. Let the engine cool until the value of ECT SENSOR 1 is 122 °F (50 °C) or less.

Signal	Current conditions	
	Values	Unit
ECT SENSOR 1		

   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 3. Start the engine, and let it idle for 10 seconds or more.
   - 4. Monitor the OBD STATUS for DTC P050B with the HDS.

DTC Description	OBD STATUS
P050B COLD START IGNITION TIMING CONTROL SYSTEM PERFORMANCE PROBLEM	

Does the HDS indicate FAILED?

YES : The failure is duplicated. Go to step 6.

NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the CKP sensor, the throttle body, the MAF sensor/IAT sensor, ECT sensor 1, ECT sensor 2, and the PCM. If the HDS indicates EXECUTING, keep idling until a result comes on. If the HDS indicates OUT OF CONDITION, go to step 1. and recheck.

6. Determine possible failure area (CKP sensor, others):
   - 1. CHECK THE IGNITION TIMING .

Is the ignition timing OK?

YES : Go to step 8.

NO : Go to step 7.

7. CKP sensor and CKP pulse plate visual check:
   - 1. Check for damage at the CKP sensor and the CKP pulse plate.

Is the CKP sensor and/or the CKP pulse plate damaged?

YES : **REPLACE THE CKP SENSOR** and/or the **CKP PULSE PLATE** , then **do the repair**

GETtheMANUALS.org

verification .

NO : The CKP sensor and the CKP pulse plate is OK. **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

8. Throttle body test:
   - 1. Do the ETCS TEST with the HDS.

Is the THROTTLE ACTUATOR CONTROL VALVE normal?

YES : The throttle body is OK. Go to step 9.

NO : **Replace the throttle body** See **THROTTLE BODY DISASSEMBLY AND REASSEMBLY** , **THROTTLE BODY REMOVAL AND INSTALLATION** or **THROTTLE BODY CLEANING** , then **do the repair verification** .

9. MAF sensor performance check:
   - 1. Start the engine. Hold the engine speed at 3, 000 rpm without load (in P or N) until the radiator fan comes on, then let it idle.
   - 2. While holding the engine speed at 2, 500 rpm for 30 seconds, check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
MAF SENSOR	7.0-8.6	g/s		

Do the current condition(s) match the threshold?

YES : The MAF sensor is OK. Go to step 10.

NO : **REPLACE THE MAF SENSOR/IAT SENSOR** , then **do the repair verification** .

10. ECT sensor 1 and ECT sensor 2 performance check:
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Allow the engine to cool to the ambient temperature.
    - 3. Note the ambient temperature.
    - 4. Turn the ignition switch to ON (II).
    - 5. Quickly note the value of ECT SENSOR 1 and ECT SENSOR 2 in the DATA LIST with the HDS.

Signal	Current conditions	
	Values	Unit

GETtheMANUALS.org

ECT SENSOR 1		
ECT SENSOR 2		

- 6. Compare the value of ECT SENSOR 1 and the value of ECT SENSOR 2 to the ambient temperature individually.

Does either sensor differ more than 5.4 °F (3 °C) from the ambient temperature?

YES : Replace the sensor that differed more than 5.4 °F (3 °C) from the ambient temperature, then **do the repair verification** .

NO : The ECT sensors are OK. Check and repair any problems with the following items. Repair or replace them if needed, then **do the repair verification** . If every item is OK, **update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

- Engine compression and cylinder leakdown
- Valve pause system
- Engine oil
- A/C system

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Turn the ignition switch to LOCK (0).
- 2. Reconnect all connectors.
- 3. Turn the ignition switch to ON (II).
- 4. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 5. **DO THE PCM IDLE LEARN PROCEDURE** .
- 6. Let the engine cool until the value of ECT SENSOR 1 is 122 °F (50 °C) or less.

Signal	Current conditions	
	Values	Unit
ECT SENSOR 1		

- 7. Start the engine, and let it idle for 10 seconds or more.
- 8. Monitor the OBD STATUS for DTC P050B in the DTCs MENU with the HDS.

DTC Description	OBD STATUS
P050B COLD START IGNITION TIMING CONTROL SYSTEM PERFORMANCE PROBLEM	

GETtheMANUALS.org

Does the HDS indicate PASSED, FAILED, EXECUTING, or OUT OF CONDITION?

PASSED : Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

FAILED : Go to step 1 and recheck. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then check the OBD STATUS again.

EXECUTING : Keep the test condition until a result comes on.

OUT OF CONDITION : Meet the test condition, and check the OBD STATUS again.

DTC P0532: A/C PRESSURE SENSOR CIRCUIT LOW VOLTAGE

GETtheMANUALS.org

DTC Troubleshooting: P0532

Fig. 250: DTC Troubleshooting Flow Chart (P0532)

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0532 A/C PRESSURE SENSOR CIRCUIT LOW VOLTAGE			

1. Problem verification:
   - 1. Start the engine, and let it idle.
   - 2. Turn the blower switch on.
   - 3. Turn the A/C switch on.
   - 4. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
A/C PRESSURE SENSOR	Less than 0.24	V		

Do the current condition(s) match the threshold?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the A/C pressure sensor and the PCM.

2. Determine possible failure area (PD SENSOR line, others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     A/C pressure sensor 3P connector

   - 3. Turn the ignition switch to ON (II).
   - 4. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
A/C PRESSURE SENSOR	Less than 0.24	V		

Do the current condition(s) match the threshold?

GETtheMANUALS.org

YES : Go to step 5.

NO : Go to step 3.

3. Determine possible failure area (A/C pressure sensor, others):
    - 1. Measure the voltage between test points 1 and 2.

      Test condition IG ON (II)

      A/C pressure sensor 3P connector: disconnected

      Test circuit VCC6, SG6

      Test point 1 A/C pressure sensor 3P connector No. 1 (GRY)

      Test point 2 A/C pressure sensor 3P connector No. 3 (RED)

Fig. 251: Measuring Voltage Between A/C Pressure Sensor 3P Connector No. 1 (GRY) And No. 3 (RED)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5.0 V?

YES : **REPLACE THE A/C PRESSURE SENSOR** , then **do the repair verification** .

NO : Go to step 4.

4. Open wire check (VCC6 line):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Jump the SCS line with the HDS.
    - 3. Disconnect the following connector. PCM connector A (49P)
    - 4. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      A/C pressure sensor 3P connector: disconnected

GETtheMANUALS.org

PCM connector A (49P): disconnected

Test circuit VCC6

Test point 1 PCM connector A (49P) No. 30 (RED)

Test point 2 A/C pressure sensor 3P connector No. 3 (RED)

Fig. 252: Checking Continuity Between PCM Connector A (49P) No. 30 (RED) And A/C Pressure Sensor 3P Connector No. 3 (RED)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The VCC6 wire is OK. **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

NO : Repair an open in the VCC6 wire between the PCM (A30) and the A/C pressure sensor, then **do the repair verification** .

5. Shorted wire check (PD SENSOR line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connector.

     PCM connector A (49P)

   - 4. Check for continuity between test points 1 and 2.

GETtheMANUALS.org

Test condition IG LOCK (0)

A/C pressure sensor 3P connector: disconnected

PCM connector A (49P): disconnected

Test circuit PD SENSOR

Test point 1 A/C pressure sensor 3P connector No. 2 (BLU)

Test point 2 Body ground

Fig. 253: Checking Continuity Between A/C Pressure Sensor 3P Connector No. 2 (BLU) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short in the PD SENSOR wire between the PCM (A27) and the A/C pressure sensor, then **do the repair verification** .

NO : The PD SENSOR wire is OK. **Update the PCM** See **PCM UPDATE** or **PCM REMOVAL AND INSTALLATION** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

REPAIR VERIFICATION

- 1. Turn the ignition switch to LOCK (0).
- 2. Reconnect all connectors.
- 3. Turn the ignition switch to ON (II).
- 4. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 5. **DO THE PCM IDLE LEARN PROCEDURE** .
- 6. Start the engine, and let it idle.
- 7. Turn the blower switch on.
- 8. Turn the A/C switch on.

GETtheMANUALS.org

- 9. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0532 A/C PRESSURE SENSOR CIRCUIT LOW VOLTAGE			

Is DTC P0532 indicated?

YES : Check for poor connections or loose terminals at the A/C pressure sensor and the PCM. If the PCM was updated, **substitute a known-good PCM** See **PCM UPDATE** or **PCM REMOVAL AND INSTALLATION** , then recheck. If the PCM was substituted, go to step 1.

NO : Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

DTC P0533: A/C PRESSURE SENSOR CIRCUIT HIGH VOLTAGE

GETtheMANUALS.org

DTC Troubleshooting: P0533

Is there continuity?

YES : The PD SENSOR wire is OK. **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

NO : Repair an open in the PD SENSOR wire between the PCM (A27) and the A/C pressure sensor, then **do the repair verification** .

5. Open wire check (SG6 line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connector.

     PCM connector A (49P)

   - 4. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     A/C pressure sensor 3P connector: disconnected

     PCM connector A (49P): disconnected

     Test circuit SG6

GETtheMANUALS.org

Test point 1 PCM connector A (49P) No. 10 (GRY)

Test point 2 A/C pressure sensor 3P connector No. 1 (GRY)

Fig. 258: Checking Continuity Between PCM Connector A (49P) No. 10 (GRY) And A/C Pressure Sensor 3P Connector No. 1 (GRY)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The SG6 wire is OK. **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM UPDATE** or **PCM REMOVAL AND INSTALLATION** , then **do the repair verification** .

NO : Repair an open in the SG6 wire between the PCM (A10) and the A/C pressure sensor, then **do the repair verification** .

REPAIR VERIFICATION

- 1. Turn the ignition switch to LOCK (0).
- 2. Reconnect all connectors.
- 3. Turn the ignition switch to ON (II).
- 4. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 5. **DO THE PCM IDLE LEARN PROCEDURE** .
- 6. Start the engine, and let it idle.
- 7. Turn the blower switch on.
- 8. Turn the A/C switch on.
- 9. Check for Pending or Confirmed DTCs with the HDS.

GETtheMANUALS.org

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0533 A/C PRESSURE SENSOR CIRCUIT HIGH VOLTAGE			

Is DTC P0533 indicated?

YES : Check for poor connections or loose terminals at the A/C pressure sensor and the PCM. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then recheck. If the PCM was substituted, go to step 1.

NO : Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

DTC P0562: CHARGING SYSTEM LOW VOLTAGE

Fig. 259: DTC Troubleshooting Flow Chart (P0562)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**
- **Check for loose terminal on the alternator (+B terminal). If the alternator +B terminal was loose, the DTC P0562 will be stored.**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0562 CHARGING SYSTEM LOW VOLTAGE			

1. DTC check:
    - 1. Turn the ignition switch to ON (II).

GETtheMANUALS.org

- 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 3. Start the engine, and let it idle without load for 1 minute.
- 4. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P16BB ALTERNATOR B TERMINAL CIRCUIT LOW VOLTAGE			

Is DTC P16BB indicated?

YES : **DO THE TROUBLESHOOTING FOR DTC P16BB**.

NO : Go to step 2.

2. Problem verification:
   - 1. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0562 CHARGING SYSTEM LOW VOLTAGE			

Is DTC P0562 is indicated?

YES : **Repair or replace the alternator** See **ALTERNATOR OVERHAUL** or **ALTERNATOR REMOVAL AND INSTALLATION** .

NO : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the +B terminal on the alternator and the under-hood fuse/relay box.

DTC P0563: PCM POWER SOURCE CIRCUIT UNEXPECTED VOLTAGE

GETtheMANUALS.org

DTC Troubleshooting: P0563

GETtheMANUALS.org

Fig. 260: DTC Troubleshooting Flow Chart (P0563)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0563 PCM POWER SOURCE CIRCUIT UNEXPECTED VOLTAGE			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 3. Turn the ignition switch to LOCK (0).
   - 4. Wait 10 seconds.
   - 5. Turn the ignition switch to ON (II).
   - 6. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0563 PCM POWER SOURCE CIRCUIT UNEXPECTED VOLTAGE			

Is DTC P0563 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at PGM-FI main relay 1 and the PCM.

2. Determine possible failure area (FI MAIN RLY OUT line, others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connector.

     PCM connector A (49P)

   - 4. Measure the voltage between test points 1 and 2.

     Test condition IG LOCK (0)

GETtheMANUALS.org

PCM connector A (49P): disconnected

Test circuit FI MAIN RLY CL-

Test point 1 PCM connector A (49P) No. 7 (GRY)

Test point 2 Body ground

Fig. 261: Measuring Voltage Between PCM Connector A (49P) No. 7 (GRY) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : Go to step 5.

NO : Go to step 3.

3. Shorted wire check (FI MAIN RLY CL- line):
   - 1. Remove PGM-FI main relay 1 (A) from the under-dash fuse/relay box.

GETtheMANUALS.org

Fig. 262: Identifying PGM-FI Main Relay
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 2. Check for continuity between test points 1 and 2.

  Test condition IG LOCK (0)

  PCM connector A (49P): disconnected

  PGM-FI main relay 1: disconnected

  Test circuit FI MAIN RLY CL-

  Test point 1 PCM connector A (49P) No. 7 (GRY)

  Test point 2 Body ground

Fig. 263: Checking Continuity Between PCM Connector A (49P) No. 7 (GRY) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short in the FI MAIN RLY CL- wire between the PCM (A7) and PGM-FI main relay 1, then **do the repair verification** .

NO : The FI MAIN RLY CL- wire is OK. Go to step 4.

4. Relay check:
   - 1. **TEST PGM-FI MAIN RELAY 1** .

Is PGM-FI main relay 1 OK?

YES : **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

GETtheMANUALS.org

NO : Replace PGM-FI main relay 1, then **do the repair verification** .

5. Shorted wire check (FI MAIN RLY OUT line to power):
   - 1. Remove PGM-FI main relay 1 (A) from the under-dash fuse/relay box.

Fig. 264: Identifying PGM-FI Main Relay
Courtesy of AMERICAN HONDA MOTOR CO., INC.

   - 2. Measure the voltage between test points 1 and 2.

     Test condition IG LOCK (0)

     PCM connector A (49P): disconnected

     PGM-FI main relay 1: disconnected

     Test circuit FI MAIN RLY OUT

     Test point 1 PCM connector A (49P) No. 9 (BRN)

     Test point 2 Body ground

GETtheMANUALS.org

Fig. 265: Measuring Voltage Between PCM Connector A (49P) No. 9 (BRN) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : Repair a short to power in the FI MAIN RLY OUT wire between the PCM (A9) and PGM-FI main relay 1, then **do the repair verification** .

NO : The FI MAIN RLY OUT wire is OK. Go to step 6.

6. Relay check:
   - 1. **TEST PGM-FI MAIN RELAY 1** .

Is PGM-FI main relay 1 OK?

YES : PGM-FI main relay 1 is OK. **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

NO : Replace PGM-FI main relay 1, then **do the repair verification** .

REPAIR VERIFICATION

- 1. Turn the ignition switch to LOCK (0).
- 2. Reconnect all connectors.
- 3. Turn the ignition switch to ON (II).
- 4. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 5. **DO THE PCM IDLE LEARN PROCEDURE** .
- 6. Turn the ignition switch to LOCK (0).
- 7. Wait 10 seconds.
- 8. Turn the ignition switch to ON (II).
- 9. Check for Pending or Confirmed DTCs with the HDS.

GETtheMANUALS.org

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0563 PCM POWER SOURCE CIRCUIT UNEXPECTED VOLTAGE			

Is DTC P0563 indicated?

YES : Check for poor connections or loose terminals at PGM-FI main relay 1 and the PCM. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then recheck. If the PCM was substituted, go to step 1.

NO : Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM UPDATE** or **PCM REMOVAL AND INSTALLATION** . If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

DTC P0602: PCM PROGRAMMING ERROR

Fig. 266: DTC Troubleshooting Flow Chart (P0602)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**
- **This DTC is indicated when a PCM update is not completed.**
- **Do not turn the ignition switch to ACC (I) or LOCK (0) while updating the PCM. If you do, the PCM can be damaged.**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0602 PCM PROGRAMMING ERROR			

1. Problem verification (update):
   - 1. **Do the PCM update procedure** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** .

GETtheMANUALS.org

- 2. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0602 PCM PROGRAMMING ERROR			

Is DTC P0602 indicated?

YES : **Replace the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** .

NO : Update is complete. If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

DTC P060A: PCM INTERNAL CONTROL MODULE MALFUNCTION

Fig. 267: DTC Troubleshooting Flow Chart (P060A)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

P062F PCM INTERNAL CONTROL MODULE KEEP ALIVE MEMORY (KAM) ERROR			

Is DTC P062F indicated?

YES : If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then recheck. If the PCM was substituted, go to step 1.

NO : Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

DTC P0630: VIN NOT PROGRAMMED OR MISMATCH

GETtheMANUALS.org

Fig. 269: DTC Troubleshooting Flow Chart (P0630)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**
- **This DTC is stored only when the PCM does not have the VIN information of the vehicle. Use the HDS to input the missing VIN information.**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0630 VIN NOT PROGRAMMED OR MISMATCH			

1. VIN check:
   - 1. Turn the ignition switch to ON (II).
   - 2. Check the VIN with the HDS.

   Does the HDS show the vehicle's VIN?

   YES : Go to step 4.

   NO : Go to step 2.

2. VIN check (rewrite):
   - 1. Input the VIN to the PCM with the HDS.

   Does the HDS show COMPLETE?

   YES : Go to step 4.

   NO : Go to step 3.

3. DTC check:
   - 1. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P062F PCM INTERNAL CONTROL MODULE KEEP ALIVE MEMORY (KAM) ERROR			

   Is DTC P062F indicated?

   YES : **DO THE DTC P062F TROUBLESHOOTING**.

GETtheMANUALS.org

NO : Go to step 4.

4. PCM check:
   - 1. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 2. Turn the ignition switch to LOCK (0).
   - 3. Turn the ignition switch to ON (II), and wait 5 seconds.
   - 4. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0630 VIN NOT PROGRAMMED OR MISMATCH			

Is DTC P0630 indicated?

YES : **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then recheck.

NO : Intermittent failure, the system is OK at this time. If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

DTC P0641: SENSOR REFERENCE VOLTAGE A MALFUNCTION

GETtheMANUALS.org

DTC Troubleshooting: P0641

Fig. 270: DTC Troubleshooting Flow Chart (P0641)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

GETtheMANUALS.org

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0641 SENSOR REFERENCE VOLTAGE A MALFUNCTION			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 3. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0641 SENSOR REFERENCE VOLTAGE A MALFUNCTION			

Is DTC P0641 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the PCM and these parts:

- MAP sensor
- Output shaft (countershaft) speed sensor
- Throttle body
- APP sensor

2. Determine possible failure area (VCC lines, others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the connectors from these parts:
     - MAP sensor
     - Output shaft (countershaft) speed sensor
     - Throttle body
     - APP sensor
   - Turn the ignition switch to ON (II).
   - **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0641 SENSOR REFERENCE VOLTAGE A			

GETtheMANUALS.org

MALFUNCTION			

Is DTC P0641 indicated?

YES : Go to step 4.

NO : Go to step 3.

3. Shorted part check:
   - 1. Check for Pending or Confirmed DTCs with the HDS while reconnecting these parts, one at a time:
     - MAP sensor
     - Output shaft (countershaft) speed sensor
     - Throttle body
     - APP sensor

Is DTC P0641 indicated?

YES : Replace the part that caused the DTC when it was reconnected, then **do the repair verification** .

NO : Check for poor connections or loose terminals at the PCM and the following parts, then go to step 1.

- MAP sensor
- Output shaft (countershaft) speed sensor
- Throttle body
- APP sensor

4. Shorted wire check (VCC lines):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connectors.

     PCM connector A (49P)

     PCM connector C (49P)

   - 4. Check for continuity between these test points and body ground individually.

     Test condition IG LOCK (0)

P0651 SENSOR REFERENCE VOLTAGE B MALFUNCTION			

Is DTC P0651 indicated?

YES : Check for poor connections or loose terminals at the PCM and the following parts, then go to step 1.

- APP sensor
- A/C pressure sensor
- FTP sensor
- Input shaft (mainshaft) speed sensor

NO : Troubleshooting is complete. If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

DTC P065A: ACG NO CHARGING MALFUNCTION

GETtheMANUALS.org

DTC Troubleshooting: P065A

Fig. 276: DTC Troubleshooting Flow Chart (P065A)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P065A ACG NO CHARGING MALFUNCTION			

1. DTC check:
   - 1. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 2. Start the engine, and let it idle 1 minute.
   - 3. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0562 CHARGING SYSTEM LOW VOLTAGE			

Is DTC P0562 indicated?

YES : **DO THE DTC P0562 TROUBLESHOOTING**.

NO : Go to step 2.

2. Problem verification:

GETtheMANUALS.org

- 1. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P065A ACG NO CHARGING MALFUNCTION			

Is DTC P065A indicated?

YES : Go to step 3.

NO : Intermittent failure, the system is OK at this time. Check the alternator and the drive belt.

3. Drive belt check:
   - 1. **INSPECT THE DRIVE BELT** .

Is the drive belt OK?

YES : **Repair or replace the alternator** See **ALTERNATOR OVERHAUL** or **ALTERNATOR REMOVAL AND INSTALLATION** .

NO : **REPLACE THE DRIVE BELT** .

DTC P0685: PCM POWER CONTROL CIRCUIT/INTERNAL CIRCUIT MALFUNCTION

Fig. 277: DTC Troubleshooting Flow Chart (P0685)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**
- **If the problem doesn't return after you clear the DTC, or if this DTC is stored intermittently, check for loose terminals at the IGP line connectors before replacing the PCM.**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0685 PCM POWER CONTROL CIRCUIT/INTERNAL CIRCUIT MALFUNCTION			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 3. Start the engine, and let it idle for 30 seconds.
   - 4. Turn the ignition switch to LOCK (0).
   - 5. Turn the ignition switch to ON (II).
   - 6. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0685 PCM POWER CONTROL CIRCUIT/INTERNAL CIRCUIT MALFUNCTION			

Is DTC P0685 indicated?

YES : The failure is duplicated. **Update the PCM** See **PCM UPDATE** or **PCM REMOVAL AND INSTALLATION** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

NO : Intermittent failure. Check the following items:

- PGM-FI main relay 1
- PGM-FI main fuse
- Poor connections or loose terminals between the PCM and the under-hood fuse/relay box
- Poor or loose PCM ground terminals and connections
- Poor or loose battery cables and connections
- Check the battery

REPAIR VERIFICATION

GETtheMANUALS.org

- 1. Start the engine, and let it idle for 30 seconds.
- 2. Turn the ignition switch to LOCK (0).
- 3. Turn the ignition switch to ON (II).
- 4. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0685 PCM POWER CONTROL CIRCUIT/INTERNAL CIRCUIT MALFUNCTION			

Is DTC P0685 indicated?

YES : If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then recheck. If the PCM was substituted, go to step 1.

NO : Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

DTC P06A8: INTERNAL VCC POWER MALFUNCTION

Fig. 278: DTC Troubleshooting Flow Chart (P06A8)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P06A8 INTERNAL VCC POWER MALFUNCTION			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or

GETtheMANUALS.org

HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .

- 3. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P06A8 INTERNAL VCC POWER MALFUNCTION			

Is DTC P06A8 indicated?

YES : **Replace the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** .

NO : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the PCM.

DTC P1009: VTC ADVANCE MALFUNCTION

GETtheMANUALS.org

DTC Troubleshooting: P1009

Fig. 279: DTC Troubleshooting Flow Chart (P1009)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**
- **If DTC P0341 is stored at the same time as DTC P1009, troubleshoot DTC P1009 first, then recheck for DTC P0341.**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame

GETtheMANUALS.org

P1009 VTC ADVANCE MALFUNCTION			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 3. Start the engine.
   - 4. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P1009 VTC ADVANCE MALFUNCTION			

Is DTC P1009 indicated?

YES : Go to step 2.

NO : Intermittent failure, the system is OK at this time.

2. VTC strainer visual check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. **REMOVE THE AUTO-TENSIONER** .
   - 3. Remove the VTC strainer (A), and check it for clogging.

Fig. 280: Identifying VTC Strainer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is the strainer OK?

YES : Go to step 3.

GETtheMANUALS.org

NO : Clean the VTC strainer, REPLACE THE ENGINE OIL FILTER and the ENGINE OIL , then **do the repair verification** .

3. VTC oil control valve operation check:
   - 1. TEST THE VTC OIL CONTROL SOLENOID VALVE .

   Is the VTC oil control solenoid valve OK?

   YES : Go to step 4.

   NO : REPLACE THE VTC OIL CONTROL SOLENOID VALVE , then **do the repair verification** .

4. VTC actuator check:
   - 1. INSPECT THE VTC ACTUATOR .

   Is the actuator OK?

   YES : Check the VTC system oil passages and clean them if needed, then **do the repair verification** .

   NO : REPLACE THE VTC ACTUATOR , then **do the repair verification** .

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Turn the ignition switch to ON (II).
- 2. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 3. **DO THE PCM IDLE LEARN PROCEDURE** .
- 4. **Do the CKP pattern clear/CKP pattern learn procedure** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 5. Do the VTC TEST in the INSPECTION MENU with the HDS.
- 6. Monitor the OBD STATUS for DTC P0011 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P1009 VTC ADVANCE MALFUNCTION	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED : Troubleshooting is complete. If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED : Go to step 1 and recheck.

NOT COMPLETED : Check the OBD STATUS again.

DTC P1109: BARO SENSOR CIRCUIT OUT OF RANGE HIGH

GETtheMANUALS.org

DTC Troubleshooting: P1109

Fig. 281: DTC Troubleshooting Flow Chart (P1109)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P1109 BARO SENSOR CIRCUIT OUT OF RANGE HIGH			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 3. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P1109 BARO SENSOR CIRCUIT OUT OF RANGE HIGH			

Is DTC P1109 indicated?

YES : The failure is duplicated. **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or

GETtheMANUALS.org

PCM UPDATE if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

NO : Intermittent failure, the system is OK at this time.

REPAIR VERIFICATION

- 1. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P1109 BARO SENSOR CIRCUIT OUT OF RANGE HIGH			

Is DTC P1109 indicated?

YES : If the PCM was updated, **substitute a known-good PCM** See **PCM UPDATE** or **PCM REMOVAL AND INSTALLATION** , then recheck. If the PCM was substituted, go to step 1.

NO : If the PCM was updated, troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

DTC P1116: ECT SENSOR 1 RANGE/PERFORMANCE PROBLEM

GETtheMANUALS.org

DTC Troubleshooting: P1116

GETtheMANUALS.org

Fig. 282: DTC Troubleshooting Flow Chart (P1116)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**
- **If DTC P0111 is stored at the same time as DTC P1116, troubleshoot DTC P0111 first, then recheck for DTC P1116.**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P1116 ECT SENSOR 1 CIRCUIT RANGE/PERFORMANCE PROBLEM			

1. Connector visual check:
   - 1. Check for poor connections or loose terminals at these locations:
     - ECT sensor 1
     - ECT sensor 2

   Are the connections and terminals OK?

   YES : The connections and terminals are OK. Go to step 2.

   NO : Repair the connections or terminals, then **do the repair verification** .

2. PGM-FI system check:
   - 1. Turn the ignition switch to ON (II).
   - 2. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P1116 ECT SENSOR 1 CIRCUIT RANGE/PERFORMANCE PROBLEM			
P2183 ECT SENSOR 2 CIRCUIT RANGE/PERFORMANCE PROBLEM			

   Are DTC P1116 and P2183 indicated at the same time?

   YES : Go to step 5.

   NO : Only DTC P1116 is indicated. Go to step 3.

3. ECT sensor 1 performance check:

GETtheMANUALS.org

- 1. Start the engine, and let it idle for 10 minutes.
- 2. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
ECT SENSOR 1	Less than 108	°F		
	Less than 42	°C		

Do the current condition(s) match the threshold?

YES : **REPLACE ECT SENSOR 1** , then **do the repair verification** .

NO : ECT sensor 1 is OK at this time. Go to step 4.

4. Problem verification:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Allow ECT sensor 1 to cool to the ambient temperature.
   - 3. Note the ambient temperature.
   - 4. Turn the ignition switch to ON (II).
   - 5. Quickly note the value of ECT SENSOR 1 in the DATA LIST with the HDS.

Signal	Current conditions	
	Values	Unit
ECT SENSOR 1		

   - 6. Compare the value of ECT SENSOR 1 and the ambient temperature.

Does the value of ECT SENSOR 1 differ 5.4 °F (3 °C) or more from the ambient temperature?

YES : **REPLACE ECT SENSOR 1** , then **do the repair verification** .

NO : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at ECT sensor 1, ECT sensor 2, and the PCM.

5. ECT sensor 1 performance check:
   - 1. Start the engine, and let it idle for 10 minutes.
   - 2. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
ECT SENSOR 1	Less than 108	°F		
	Less than 42	°C		

GETtheMANUALS.org

Do the current condition(s) match the threshold?

YES : **<u>REPLACE ECT SENSOR 1</u>** , then **do the repair verification** .

NO : Go to step 6.

6. ECT sensor 2 performance check:
   - 1. Let the engine idle for 10 minutes.
   - 2. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
ECT SENSOR 2	Less than 108	°F		
	Less than 42	°C		

Do the current condition(s) match the threshold?

YES : **<u>REPLACE ECT SENSOR 2</u>** , then **do the repair verification** .

NO : Go to step 7.

7. Problem verification:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Allow the sensors to cool to the ambient temperature.
   - 3. Note the ambient temperature.
   - 4. Turn the ignition switch to ON (II).
   - 5. Quickly note the value of ECT SENSOR 1 and ECT SENSOR 2 in the DATA LIST with the HDS.

Signal	Current conditions	
	Values	Unit
ECT SENSOR 1		
ECT SENSOR 2		

   - 6. Compare the value of ECT SENSOR 1 and the value of ECT SENSOR 2 to the ambient temperature individually.

Does either sensor differ more than 5.4 °F (3 °C) from the ambient temperature?

YES : Replace the sensor that differed more than 5.4 °F (3 °C) from the ambient temperature, then **do the repair verification** .

NO : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at ECT sensor 1, ECT sensor 2, and the PCM.

GETtheMANUALS.org

REPAIR VERIFICATION

- 1. Turn the ignition switch to ON (II).
- 2. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 3. **DO THE PCM IDLE LEARN PROCEDURE** .
- 4. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P1116 ECT SENSOR 1 CIRCUIT RANGE/PERFORMANCE PROBLEM			

Is DTC P1116 indicated?

YES : Check for poor connections or loose terminals at ECT sensor 1, ECT sensor 2, and the PCM, then go to step 1.

NO : Troubleshooting is complete. If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

DTC P1128: MAP SENSOR SIGNAL LOWER THAN EXPECTED

GETtheMANUALS.org

DTC Troubleshooting: P1128

Fig. 283: DTC Troubleshooting Flow Chart (P1128)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**
- **Before you begin, check for poor connections or a blockage at the intake air duct.**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P1128 MAP SENSOR SIGNAL LOWER THAN EXPECTED			

1. MAP sensor performance check:
   - 1. Turn the ignition switch to ON (II).
   - 2. Check the parameter(s) below with the HDS for 5 seconds.

GETtheMANUALS.org

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
MAP SENSOR	Less than 54.1	kPa		
	1.61	V		

Did the value maintain the threshold for 5 seconds or more?

YES : **REPLACE THE MAP SENSOR** , then **do the repair verification** .

NO : Go to step 2.

2. Problem verification:
   - 1. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 2. Start the engine. Hold the engine speed at 3, 000 rpm without load (in P or N) until the radiator fan comes on, then let it idle.
   - 3. Test-drive under these conditions:
     - Engine coolant temperature (ECT SENSOR 1) above 158 °F (70 °C)
     - Engine speed at 1, 400 rpm or more
     - Transmission in D
     - Vehicle speed accelerated to 15 mph (24 km/h) or more under half throttle

Signal	Current conditions	
	Values	Unit
ECT SENSOR 1		
ENGINE SPEED		
VEHICLE SPEED		

   - 4. Monitor the OBD STATUS for DTC P1128 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P1128 MAP SENSOR SIGNAL LOWER THAN EXPECTED	

Does the HDS indicate FAILED?

YES : The failure is duplicated. **REPLACE THE MAP SENSOR** , then **do the repair verification** .

NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the MAP sensor and the PCM. If the HDS indicates NOT COMPLETED, go to step **2-2** and recheck.

REPAIR VERIFICATION (OBD STATUS CHECK)

GETtheMANUALS.org

- 1. Turn the ignition switch to ON (II).
- 2. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 3. **DO THE PCM IDLE LEARN PROCEDURE** .
- 4. Start the engine. Hold the engine speed at 3, 000 rpm without load (in P or N) until the radiator fan comes on, then let it idle.
- 5. Test-drive under these conditions:
  - Engine coolant temperature (ECT SENSOR 1) above 158 °F (70 °C)
  - Engine speed at 1, 400 rpm or more
  - Transmission in D
  - Vehicle speed accelerated to 15 mph (24 km/h) or more under half throttle

Signal	Current conditions	
	Values	Unit
ECT SENSOR 1		
ENGINE SPEED		
VEHICLE SPEED		

- 6. Monitor the OBD STATUS for DTC P1128 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P1128 MAP SENSOR SIGNAL LOWER THAN EXPECTED	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED : Troubleshooting is complete. If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED : Go to step 1 and recheck.

NOT COMPLETED : Meet the test condition, and check the OBD STATUS again.

DTC P1129: MAP SENSOR SIGNAL HIGHER THAN EXPECTED

GETtheMANUALS.org

DTC Troubleshooting: P1129

Fig. 284: DTC Troubleshooting Flow Chart (P1129)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P1129 MAP SENSOR SIGNAL HIGHER THAN EXPECTED			

1. Vacuum leak check:
    - 1. Check for vacuum leaks in these parts:
        - PCV valve

GETtheMANUALS.org

- PCV hose
- EVAP canister purge valve
- Throttle body
- Intake manifold
- Brake booster
- Brake booster hose

Are there any vacuum leaks?

YES : Repair or replace the parts with vacuum leaks, then **do the repair verification** .

NO : Go to step 2.

2. MAP sensor performance check:
   - 1. Start the engine. Hold the engine speed at 3, 000 rpm without load (in P or N) until the radiator fan comes on, then let it idle.
   - 2. Check the parameter(s) below with the HDS for 5 seconds.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
MAP SENSOR	More than 36.9	kPa		
	More than 1.1	V		

Did the value maintain the threshold for 5 seconds or more?

YES : **REPLACE THE MAP SENSOR** , then **do the repair verification** .

NO : Go to step 3.

3. Problem verification:
   - 1. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 2. Test-drive under these conditions:
     - Engine coolant temperature (ECT SENSOR 1) above 158 °F (70 °C)
     - Engine speed between 1, 400-6, 800 rpm
     - Transmission in D
     - Drive at a steady speed between 55-75 mph (88-120 km/h) for 10 seconds, then decelerate (with the throttle fully closed) for at least 2 seconds

- 6. Monitor the OBD STATUS for DTC P1129 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P1129 MAP SENSOR SIGNAL HIGHER THAN EXPECTED	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

GETtheMANUALS.org

PASSED : Troubleshooting is complete. If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED : Go to step 1 and recheck.

NOT COMPLETED : Meet the test condition, and check the OBD STATUS again.

DTC P1157: A/F SENSOR (SENSOR 1) AFS CIRCUIT HIGH VOLTAGE

Fig. 285: DTC Troubleshooting Flow Chart (P1157)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P1157 A/F SENSOR (SENSOR 1) AFS CIRCUIT HIGH VOLTAGE			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 3. Start the engine, and wait 1 minute.
   - 4. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P1157 A/F SENSOR (SENSOR 1) AFS CIRCUIT HIGH VOLTAGE			

Is DTC P1157 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the A/F sensor (Sensor 1), the PGM-FI subrelay, and the PCM.

2. Open wire check (AFS+ line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connectors.

     A/F sensor (Sensor 1) 4P connector

     PCM connector C (49P)

   - 4. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     A/F sensor (Sensor 1) 4P connector: disconnected

GETtheMANUALS.org

PCM connector C (49P): disconnected

Test circuit AFS+

Test point 1 PCM connector C (49P) No. 39 (RED)

Test point 2 A/F sensor (Sensor 1) 4P connector No. 2 (RED)

Fig. 286: Checking Continuity Between PCM Connector C (49P) No. 39 (RED) And A/F Sensor (Sensor 1) 4P Connector No. 2 (RED)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The AFS+ wire is OK. Go to step 3.

NO : Repair an open in the AFS+ wire between the PCM (C39) and the A/F sensor (Sensor 1), then **do the repair verification** .

3. Open wire check (AFS- line):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     A/F sensor (Sensor 1) 4P connector: disconnected

     PCM connector C (49P): disconnected

     Test circuit AFS-

GETtheMANUALS.org

Test point 1 PCM connector C (49P) No. 40 (YEL)

Test point 2 A/F sensor (Sensor 1) 4P connector No. 2 (YEL)

Fig. 287: Checking Continuity Between PCM Connector C (49P) No. 40 (YEL) And A/F Sensor (Sensor 1) 4P Connector No. 2 (YEL)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The AFS- wire is OK. Go to step 4.

NO : Repair an open in the AFS- wire between the PCM (C40) and the A/F sensor (Sensor 1), then **do the repair verification** .

4. A/F sensor (Sensor 1) check (substitution):
   - 1. Substitute a known-good A/F sensor (Sensor 1).
   - 2. Reconnect all connectors.
   - 3. Turn the ignition switch to ON (II).
   - 4. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 5. **DO THE PCM IDLE LEARN PROCEDURE** .
   - 6. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P1157 A/F SENSOR (SENSOR 1) AFS CIRCUIT			

GETtheMANUALS.org

HIGH VOLTAGE			

Is DTC P1157 indicated?

YES : The A/F sensor (Sensor 1) is OK. **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

NO : **REPLACE THE ORIGINAL A/F SENSOR (SENSOR 1)** , then **do the repair verification** .

REPAIR VERIFICATION

- 1. Turn the ignition switch to LOCK (0).
- 2. Reconnect all connectors.
- 3. Turn the ignition switch to ON (II).
- 4. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 5. **DO THE PCM IDLE LEARN PROCEDURE** .
- 6. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P1157 A/F SENSOR (SENSOR 1) AFS CIRCUIT HIGH VOLTAGE			

Is DTC P1157 indicated?

YES : Check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the PCM. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then recheck. If the PCM was substituted, go to step 1.

NO : Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

DTC P1172: A/F SENSOR (SENSOR 1) CIRCUIT OUT OF RANGE HIGH

GETtheMANUALS.org

DTC Troubleshooting: P1172

Fig. 288: DTC Troubleshooting Flow Chart (P1172)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P1172 A/F SENSOR (SENSOR 1) CIRCUIT OUT OF RANGE HIGH			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 3. Start the engine. Hold the engine speed at 3, 000 rpm without load (in P or N) until the radiator fan comes on, then let it idle.
   - 4. Monitor the OBD STATUS for DTC P1172 with the HDS.

GETtheMANUALS.org

DTC Description	OBD Status
P1172 A/F SENSOR (SENSOR 1) CIRCUIT OUT OF RANGE HIGH	

Does the HDS indicate FAILED?

YES : **REPLACE THE A/F SENSOR (SENSOR 1)** , then **do the repair verification** .

NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the A/F Sensor (Sensor 1) and the PCM. If the HDS indicates EXECUTING, keep driving until a result comes on. If the HDS indicates OUT OF CONDITION, go to step **1-3** and recheck.

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Turn the ignition switch to LOCK (0).
- 2. Reconnect all connectors.
- 3. Turn the ignition switch to ON (II).
- 4. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 5. **DO THE PCM IDLE LEARN PROCEDURE** .
- 6. Start the engine. Hold the engine speed at 3, 000 rpm without load (in P or N) until the radiator fan comes on, then let it idle.
- 7. Monitor the OBD STATUS for DTC P1172 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P1172 A/F SENSOR (SENSOR 1) CIRCUIT OUT OF RANGE HIGH	

Does the HDS indicate PASSED, FAILED, EXECUTING, or OUT OF CONDITION?

PASSED : Troubleshooting is complete. If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED : Go to step 1 and recheck.

EXECUTING : Keep idling until a result comes on.

OUT OF CONDITION : Meet the test condition, and check the OBD STATUS again.

DTC P1297: ELD CIRCUIT LOW VOLTAGE

GETtheMANUALS.org

DTC Troubleshooting: P1297

Fig. 289: DTC Troubleshooting Flow Chart (P1297)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P1297 ELD CIRCUIT LOW VOLTAGE			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Check the parameter(s) below with the HDS.

GETtheMANUALS.org

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
ELECTRIC LOAD VALUE	More than 72	A		

Do the current condition(s) match the threshold?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the under-hood fuse/relay box and the PCM.

2. Determine possible failure area (ELD, others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Under-hood fuse/relay box 3P connector

   - 3. Turn the ignition switch to ON (II).
   - 4. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
ELECTRIC LOAD VALUE	More than 72	A		

Do the current condition(s) match the threshold?

YES : Go to step 3.

NO : **REPLACE THE ELD** , then **do the repair verification** .

3. Shorted wire check (ELD line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connector.

     PCM connector A (49P)

   - 4. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Under-hood fuse/relay box 3P connector: disconnected

     PCM connector A (49P): disconnected

GETtheMANUALS.org

Test circuit ELD

Test point 1 PCM connector A (49P) No. 34 (WHT)

Test point 2 Body ground

Fig. 290: Checking Continuity Between PCM Connector A (49P) No. 34 (WHT) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short in the ELD wire between the PCM (A34) and the under-hood fuse/relay box, then **do the repair verification** .

NO : The ELD wire is OK. **Update the PCM** See **PCM UPDATE** or **PCM REMOVAL AND INSTALLATION** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

Repair verification:

- 1. Turn the ignition switch to LOCK (0).
- 2. Reconnect all connectors.
- 3. Turn the ignition switch to ON (II).
- 4. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 5. **DO THE PCM IDLE LEARN PROCEDURE** .
- 6. Start the engine.
- 7. Turn on the headlights.
- 8. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P1297 ELD CIRCUIT LOW VOLTAGE			

GETtheMANUALS.org

Is DTC P1297 indicated?

YES : Check for poor connections or loose terminals at the under-hood fuse/relay box and the PCM. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then recheck. If the PCM was substituted, go to step 1.

NO : Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

DTC P1298: ELD CIRCUIT HIGH VOLTAGE

GETtheMANUALS.org

DTC Troubleshooting: P1298

Fig. 291: DTC Troubleshooting Flow Chart (P1298)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame

GETtheMANUALS.org

P1298 ELD CIRCUIT HIGH VOLTAGE			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
ELECTRIC LOAD VALUE	Less than 0.2	A		

Do the current condition(s) match the threshold?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the under-hood fuse/relay box and the PCM.

2. Open wire check (IG1 ACG line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Under-hood fuse/relay box 3P connector

   - 3. Turn the ignition switch to ON (II).
   - 4. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     Under-hood fuse/relay box 3P connector: disconnected

     Test circuit IG1 ACG

     Test point 1 Under-hood fuse/relay box 3P connector No. 3 (RED)

     Test point 2 Body ground

GETtheMANUALS.org

Fig. 292: Measuring Voltage Between Under-Hood Fuse/Relay Box 3P Connector No. 3 (RED) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The IG1 ACG wire is OK. Go to step 3.

NO : Check the No. B2 (15 A) fuse in the under-dash fuse/relay box. If the fuse is OK, repair open in the IG1 ACG wire between the No. B2 (15 A) fuse and the under-hood fuse/relay box, then **do the repair verification** .

3. Open wire check (ELD line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connector.

     PCM connector A (49P)

   - 4. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Under-hood fuse/relay box 3P connector: disconnected

     PCM connector A (49P): disconnected

     Test circuit ELD

     Test point 1 PCM connector A (49P) No. 34 (WHT)

     Test point 2 Under-hood fuse/relay box 3P connector No. 1 (WHT)

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The ELD wire is OK. Go to step 4.

NO : Repair an open in the ELD wire between the PCM (A34) and the under-hood fuse/relay box, then **do the repair verification** .

4. Open wire check (GND line):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Under-hood fuse/relay box 3P connector: disconnected

     PCM connector A (49P): disconnected

     Test circuit GND

     Test point 1 Under-hood fuse/relay box 3P connector No. 2 (GRY)

     Test point 2 Body ground

GETtheMANUALS.org

Fig. 294: Checking Continuity Between Under-Hood Fuse/Relay Box 3P Connector No. 2 (GRY) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The GND wire is OK. Go to step 5.

NO : Repair an open in the GND wire between the under-hood fuse/relay box and G302, then **do the repair verification** .

5. ELD check (substitution):
   - 1. **SUBSTITUTE A KNOWN-GOOD ELD** .
   - 2. Turn the ignition switch to ON (II).
   - 3. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 4. **DO THE PCM IDLE LEARN PROCEDURE** .
   - 5. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P1298 ELD CIRCUIT HIGH VOLTAGE			

Is DTC P1298 indicated?

YES : **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

NO : **REPLACE THE ORIGINAL ELD** , then **do the repair verification** .

REPAIR VERIFICATION

- 1. Turn the ignition switch to LOCK (0).
- 2. Reconnect all connectors.
- 3. Turn the ignition switch to ON (II).

GETtheMANUALS.org

- 4. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 5. **DO THE PCM IDLE LEARN PROCEDURE** .
- 6. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P1298 ELD CIRCUIT HIGH VOLTAGE			

Is DTC P1298 indicated?

YES : Check for poor connections or loose terminals at the under-hood fuse/relay box and the PCM. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then recheck. If the PCM was substituted, go to step 1.

NO : Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

DTC P1454: FTP SENSOR CIRCUIT RANGE/PERFORMANCE PROBLEM

GETtheMANUALS.org

DTC Troubleshooting: P1454

Fig. 295: DTC Troubleshooting Flow Chart (P1454)

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P1454 FTP SENSOR CIRCUIT RANGE/PERFORMANCE PROBLEM			

1. EVAP system check:
   - 1. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 3. Turn the ignition switch to LOCK (0).
   - 4. Remove the fuel fill cap, and wait 1 minute.
   - 5. Turn the ignition switch to ON (II).
   - 6. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
FTP SENSOR	-0.67-0.67	kPa		
	2.4-2.6	V		

Do the current condition(s) match the threshold?

YES : Go to step 2.

NO : Go to step 4.

2. Problem verification:
   - 1. Install the fuel fill cap.
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** .
   - 3. Start the engine, and let it idle without load (in P or N) until the radiator fan comes on.
   - 4. Monitor the EVAP PC DUTY (purge control duty) in the DATA LIST with the HDS, while holding the engine speed at 3, 000 rpm with the EVAP PC DUTY at 20 % or more for at least 4 minutes, then let the engine idle.

Signal	Current conditions	
	Values	Unit
EVAP PC DUTY		

GETtheMANUALS.org

- 5. Monitor the OBD STATUS for DTC P1454 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P1454 FTP SENSOR CIRCUIT RANGE/PERFORMANCE PROBLEM	

Does the HDS indicate FAILED?

YES : The failure is duplicated. Go to step 3.

NO : If the HDS indicates PASSED, there might be an intermittent failure, and the system is OK at this time. Check the on-board snapshot, and repeat the driving conditions when the DTC set (fuel level, engine speed, vehicle speed, and outside temperature). If no problem is found, check for poor connections or loose terminals between the FTP sensor and the PCM. Also check for a blockage in the FTP sensor vent port and vent hose, and the EVAP canister vent hose and drain joint. If the HDS indicates NOT COMPLETED, let the engine idle until a result comes on.

3. EVAP canister vent shut valve operation check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. **Remove the EVAP canister vent shut valve from the EVAP canister** See **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 3. Connect the 2P connector to the EVAP canister vent shut valve.
   - 4. Turn the ignition switch to ON (II).
   - 5. Select EVAP TEST in the INSPECTION MENU, and do the EVAP CVS ON in the SINGLE SOLENOID with the HDS.
   - 6. Check the EVAP canister vent shut valve (A) operation.

Fig. 296: Identifying EVAP Canister Vent Shut Valve
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is the valve free of corrosion, and does it operate properly?

YES : Check for a blockage in the EVAP canister, the vent hoses, and the drain joint, and repair it if needed. Install the EVAP canister vent shut valve, then **do the repair verification** .

GETtheMANUALS.org

NO : **REPLACE THE EVAP CANISTER VENT SHUT VALVE** , then **do the repair verification** .

4. FTP sensor vent hose restriction check:
   - 1. Disconnect the vent hose (A) from the FTP sensor (B).

Fig. 297: Identifying Vent Hose And FTP Sensor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

   - 2. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
FTP SENSOR	-0.67-0.67	kPa		
	2.4-2.6	V		

Do the current condition(s) match the threshold?

YES : Check for a blockage in the FTP sensor vent hose, then **do the repair verification** .

NO : The FTP sensor vent hose is OK. Go to step 5.

5. FTP sensor port restriction check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Remove the FTP sensor (A) from the EVAP canister with its connector connected.

GETtheMANUALS.org

Fig. 298: Identifying FTP Sensor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 3. Turn the ignition switch to ON (II).
- 4. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
FTP SENSOR	-0.67-0.67	kPa		
	2.4-2.6	V		

Do the current condition(s) match the threshold?

YES : The FTP sensor port is OK. The EVAP canister has an internal blockage; **REPLACE THE EVAP CANISTER** , then **do the repair verification** .

NO : REPLACE THE FTP SENSOR , then **do the repair verification** .

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Turn the ignition switch to LOCK (0).
- 2. Install the parts in the reverse order of removal.
- 3. Turn the ignition switch to ON (II).
- 4. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 5. **DO THE PCM IDLE LEARN PROCEDURE** .
- 6. Monitor the EVAP PC DUTY (purge control duty) in the DATA LIST with the HDS, while holding the engine speed at 3, 000 rpm with the EVAP PC DUTY at 20 % or more for at least 4 minutes, then let

GETtheMANUALS.org

the engine idle.

Signal	Current conditions	
	Values	Unit
EVAP PC DUTY		

- 7. Monitor the OBD STATUS for DTC P1454 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P1454 FTP SENSOR CIRCUIT RANGE/PERFORMANCE PROBLEM	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED : Troubleshooting is complete. If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED : Go to step 1 and recheck.

NOT COMPLETED : Hold the engine speed at 3, 000 rpm with the EVAP PC DUTY at 20% or more until a result comes on.

DTC P1458: FTP SENSOR CIRCUIT RANGE/PERFORMANCE PROBLEM

GETtheMANUALS.org

Fig. 299: DTC Troubleshooting Flow Chart (P1458)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Special Tools Required

GETtheMANUALS.org

Vacuum Pump/Gauge, 0-30 inHg Snap-on YA4000A or equivalent, commercially available

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**
- **If any of DTCs listed below are indicated at the same time as DTC P1458, troubleshoot those DTCs first, then recheck for P1458.**
  - **P0451, P0452, P0453, P1454: FTP sensor**
  - **P2422: EVAP canister vent shut valve**
- **Do not start the engine during this troubleshooting.**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P1458 FTP SENSOR CIRCUIT RANGE/PERFORMANCE PROBLEM			

1. Fuel level check:
   - 1. Turn the ignition switch to ON (II).
   - 2. Note these recorded on-board snapshot parameters with the HDS:
     - MAX Value of FTP SENSOR
     - MIN Value of FTP SENSOR
     - FUEL LEVEL

Fig. 300: FTP Sensor Signal Waveform
Courtesy of AMERICAN HONDA MOTOR CO., INC.

   - Check the FUEL LEVEL in the DATA LIST with the HDS.

Signal	Current conditions	
	Values	Unit
FUEL LEVEL		

GETtheMANUALS.org

Is the FUEL LEVEL less than it is on the on-board snapshot?

YES : Go to step 2.

NO : Drain the fuel until the FUEL LEVEL is less than it is on the on-board snapshot, then go to step 2.

2. Determine possible failure area (FTP sensor, others):
   - 1. Take a snapshot with the HDS for 3 minutes without starting the engine.
   - 2. Check the recorded snapshot parameter with the HDS:
     - MAX Value of FTP SENSOR (FINE)
     - MIN Value of FTP SENSOR (FINE)

Fig. 301: FTP Sensor Signal Waveform (Fine)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is the difference between the MAX and MIN values of the FTP SENSOR (FINE) about 0.67 kPa (0.2 inHg, 5 mmHg) or less?

YES : Go to step 3.

NO : Go to step 5.

3. FTP sensor performance check 1:
   - 1. Check the FTP SENSOR (FINE) in the recorded snapshot with the HDS.

Does it vary 0.067 kPa (0.2 inHg, 5 mmHg) or more for 3 seconds?

YES : Go to step 4.

NO : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the FTP sensor, the EVAP canister vent shut valve, and the PCM. Also check for a blockage in the EVAP vent hose.

4. FTP sensor performance check 2:

GETtheMANUALS.org

- 1. Turn the ignition switch to LOCK (0).
- 2. REMOVE THE FTP SENSOR .
- 3. Reconnect the FTP sensor 3P connector.
- 4. Turn the ignition switch to ON (II).
- 5. Check the parameter(s) below with the HDS.

Signal	Current conditions	
	Values	Unit
FTP SENSOR (FINE)		

Does it vary 0.067 kPa (0.2 inHg, 5 mmHg) or more for 3 seconds?

YES : REPLACE THE FTP SENSOR , then **do the repair verification** .

NO : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the FTP sensor, the EVAP canister vent shut valve, and the PCM. Also check for a blockage in the EVAP vent hose.

5. Determine possible failure area (EVAP canister vent line, others):
   - 1. Remove the fuel fill cap.
   - 2. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
FTP SENSOR (FINE)	More than 0.67	kPa		
	Less than -0.67	kPa		

Do the current condition(s) match the threshold?

YES : Reinstall the fuel fill cap, then go to step 8.

NO : Go to step 6.

6. FTP sensor vent hose check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. REMOVE THE FTP SENSOR .
   - 3. Reconnect the FTP sensor 3P connector.
   - 4. Turn the ignition switch to ON (II).
   - 5. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit

GETtheMANUALS.org

FTP SENSOR (FINE)	More than 0.67	kPa		
	less than - 0.67	kPa		

Do the current condition(s) match the threshold?

YES : Remove the blockage in the FTP sensor vent hose. Replace the hose if needed.

NO : Go to step 7.

7. FTP sensor port visual check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     FTP sensor 3P connector

   - 3. Check for a blockage or damage at the FTP sensor ports (EVAP canister side and vent side).

Fig. 302: Identifying FTP Sensor Ports
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there any blockage or damage?

YES : Remove the blockage, and REPLACE THE FTP SENSOR if needed, then **do the repair verification** .

NO : REPLACE THE FTP SENSOR , then **do the repair verification** .

8. EVAP canister vent shut valve check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the fresh air hose (A) from the EVAP canister (B), then connect a vacuum pump/gauge, 0-30 inHg, to the EVAP vent shut valve as shown.

GETtheMANUALS.org

Fig. 303: Identifying EVAP Canister And Air Hose
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 3. Turn the ignition switch to ON (II).
- 4. Try to apply vacuum to the valve (not more than 5.3 kPa (1.6 inHg, 40 mmHg)) while checking the FTP SENSOR (FINE) in the DATA LIST with the HDS.

NOTE: **To avoid damaging the FTP sensor, do not apply more than 5.3 kPa (1.6 inHg, 40 mmHg) of vacuum.**

Signal	Current conditions	
	Values	Unit
FTP SENSOR (FINE)		

Does the valve hold more than 1.3 kPa (0.4 inHg, 10 mmHg) of vacuum?

YES : **REPLACE THE EVAP CANISTER VENT SHUT VALVE** , then **do the repair verification** .

NO : The EVAP canister vent shut valve is OK. Remove the blockage in the fresh air hose. Replace the hose if needed, then **do the repair verification** .

REPAIR VERIFICATION

- 1. Turn the ignition switch to LOCK (0).
- 2. Reconnect all connectors and the fresh air hose.
- 3. Turn the ignition switch to ON (II).
- 4. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .

GETtheMANUALS.org

- 5. **DO THE PCM IDLE LEARN PROCEDURE** .
- 6. Take a snapshot with the HDS for 3 minutes without starting the engine.
- 7. Check the recorded snapshot parameter with the HDS:
  - MAX Value of FTP SENSOR (FINE)
  - MIN Value of FTP SENSOR (FINE)

Fig. 304: FTP Sensor Signal Waveform (Fine)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is the difference between the MAX and MIN values of the FTP SENSOR (FINE) about 0.67 kPa (0.2 inHg, 5 mmHg) or less?

YES : Troubleshooting is complete.

NO : Check for poor connections or loose terminals at the FTP sensor, the EVAP canister vent shut valve, and the PCM, then go to step 1.

DTC P145C: EVAP SYSTEM PURGE FLOW MALFUNCTION

Fig. 305: DTC Troubleshooting Flow Chart (P145C)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board**

GETtheMANUALS.org

snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .

- **If DTC P145C is indicated alone, do the troubleshooting for DTC P0496 and P0497 using the freeze data for P145C.**
- **If DTC P0497 and P145C are stored at the same time, check for a poor connection, a blockage, or damage at the EVAP canister purge line between the EVAP canister purge valve and the EVAP canister. Also check for a stuck closed EVAP canister purge valve.**
- **If any of the DTCs listed below are indicated at the same time as DTC P145C, troubleshoot those DTCs first, then recheck for P145C.**
  - **P0496, P0497: EVAP system purge flow**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P145C EVAP SYSTEM PURGE FLOW MALFUNCTION			

1. DTC check:
   - 1. Turn the ignition switch to ON (II).
   - 2. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0496 EVAP SYSTEM HIGH PURGE FLOW DETECTED			
P0497 EVAP SYSTEM LOW PURGE FLOW DETECTED			
P145C EVAP SYSTEM PURGE FLOW MALFUNCTION			

Are DTC P0496 or P0497 and P145C indicated at the same time?

YES : Go to the indicated DTC's troubleshooting.

NO : Go to the **DTC P0496 TROUBLESHOOTING** and the **DTC P0497 TROUBLESHOOTING**.

DTC P1549: CHARGING SYSTEM HIGH VOLTAGE

GETtheMANUALS.org

DTC Troubleshooting: P1549

Fig. 306: DTC Troubleshooting Flow Chart (P1549)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**
- **If a high voltage battery (24 V, etc.) is connected to the vehicle, this DTC can be stored.**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P1549 CHARGING SYSTEM HIGH VOLTAGE			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 3. Start the engine.
   - 4. Check under these conditions:
     - A/C off
     - Headlights off
     - Rear window defogger off
   - 5. Hold the engine speed at 3, 000 rpm (in P or N) for 1 minute.

GETtheMANUALS.org

- 6. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P1549 CHARGING SYSTEM HIGH VOLTAGE			

Is DTC P1549 indicated?

YES : **Replace the alternator** See **ALTERNATOR OVERHAUL** or **ALTERNATOR REMOVAL AND INSTALLATION** , then **do the repair verification** .

NO : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the alternator and the under-hood fuse/relay box.

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Turn the ignition switch to ON (II).
- 2. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 3. **DO THE PCM IDLE LEARN PROCEDURE** .
- 4. Start the engine.
- 5. Check under these conditions:
  - A/C off
  - Headlights off
  - Rear window defogger off
- 6. Monitor the OBD STATUS for DTC P1549 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P1549 CHARGING SYSTEM HIGH VOLTAGE	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED : Troubleshooting is complete. If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED : Go to step 1 and recheck.

NOT COMPLETED : Meet the test condition, and check the OBD STATUS again.

DTC P154A: BATTERY SENSOR INTERNAL FAILURE

GETtheMANUALS.org

Fig. 307: DTC Troubleshooting Flow Chart (P154A)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P154A BATTERY SENSOR INTERNAL FAILURE			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** , and wait 5 seconds.
   - 3. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P154A BATTERY SENSOR INTERNAL FAILURE			

Is DTC P154A indicated?

YES : **REPLACE THE BATTERY SENSOR** .

NO : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the battery sensor and the PCM.

DTC P1658: ETCS CONTROL RELAY ON MALFUNCTION

GETtheMANUALS.org

DTC Troubleshooting: P1658

Fig. 308: DTC Troubleshooting Flow Chart (P1658)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P1658 ETCS CONTROL RELAY ON MALFUNCTION			

GETtheMANUALS.org

1. Problem verification:
    - 1. Turn the ignition switch to ON (II).
    - 2. Do the ETCS TEST with the HDS.

    Is the RELAY circuit OK?

    YES : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the ETCS control relay and the PCM.

    NO : The failure is duplicated. Go to step 2.

2. ETCS control relay test:
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Remove the ETCS control relay (A) from the under-dash fuse/relay box.

Fig. 309: Identifying ETCS Control Relay
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    - 3. **TEST THE ETCS CONTROL RELAY** .

    Is the ETCS control relay OK?

    YES : The ETCS control relay is OK. Go to step 3.

    NO : Replace the ETCS control relay, then **do the repair verification** .

3. Shorted wire check (ETCS RLY CL- line):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Jump the SCS line with the HDS.
    - 3. Disconnect the following connector.

GETtheMANUALS.org

PCM connector A (49P)

- 4. Check for continuity between test points 1 and 2.

  Test condition IG LOCK (0)

  ETCS control relay: disconnected

  PCM connector A (49P): disconnected

  Test circuit ETCS RLY CL-

  Test point 1 PCM connector A (49P) No. 48 (PUR)

  Test point 2 Body ground

Fig. 310: Checking Continuity Between PCM Connector A (49P) No. 48 (PUR) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short in the ETCS RLY CL- wire between the PCM (A48) and the throttle body, then **do the repair verification** .

NO : The ETCS RLY CL- wire is OK. Go to step 4.

4. Shorted wire check (VBETCS line to power):
   - 1. Disconnect the following connector.

     PCM connector C (49P)

   - 2. Turn the ignition switch to ON (II).
   - 3. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

GETtheMANUALS.org

ETCS control relay: disconnected

PCM connector A (49P): disconnected

PCM connector C (49P): disconnected

Test circuit VBETCS

Test point 1 PCM connector C (49P) No. 1 (YEL)

Test point 2 Body ground

Fig. 311: Measuring Voltage Between PCM Connector C (49P) No. 1 (YEL) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : Repair a short to power in the VBETCS wire between the PCM (C1) and the ETCS control relay, then **do the repair verification** .

NO : The VBETCS wire is OK. **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

REPAIR VERIFICATION

- 1. Turn the ignition switch to LOCK (0).
- 2. Reconnect all connectors.
- 3. Turn the ignition switch to ON (II).
- 4. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 5. **DO THE PCM IDLE LEARN PROCEDURE** .
- 6. Check for Pending or Confirmed DTCs with the HDS.

GETtheMANUALS.org

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P1658 ETCS CONTROL RELAY ON MALFUNCTION			

Is DTC P1658 indicated?

YES : Check for poor connections or loose terminals at the ETCS control relay and the PCM. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then recheck. If the PCM was substituted, go to step 1.

NO : Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

DTC P1659: ETCS CONTROL RELAY OFF MALFUNCTION

GETtheMANUALS.org

Fig. 312: DTC Troubleshooting Flow Chart (P1659)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT**

GETtheMANUALS.org

THE FUEL AND EMISSIONS SYSTEMS or HOW TO TROUBLESHOOT THE A/T SYSTEM .

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P1659 ETCS CONTROL RELAY OFF MALFUNCTION			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 3. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P1659 ETCS CONTROL RELAY OFF MALFUNCTION			

Is DTC P1659 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the ETCS control relay and the PCM.

2. Determine possible failure area (VBETCS line or +B ETCS line, others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check the following fuse.

     Fuse No. A22 (15 A)

     Location Under-hood fuse/relay box

Is the fuse OK?

YES : Go to step 3.

NO : Go to step 9.

3. ETCS control relay test:
   - 1. Remove the ETCS control relay (A) from the under-dash fuse/relay box.

GETtheMANUALS.org

Fig. 313: Identifying ETCS Control Relay
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 2. **TEST THE ETCS CONTROL RELAY** .

Is the ETCS control relay OK?

YES : The ETCS control relay is OK. Go to step 4.

NO : Replace the ETCS control relay, then **do the repair verification** .

4. Determine possible failure area (under-dash fuse/relay box, others):
   - 1. Turn the ignition switch to ON (II).
   - 2. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     ETCS control relay: disconnected

     Test circuit FI MAIN RLY OUT

     Test point 1 ETCS control relay 4P socket No. 3 (Under-dash fuse/relay box)

     Test point 2 Body ground

GETtheMANUALS.org

Fig. 314: Measuring Voltage Between ETCS Control Relay 4P Socket No. 3 (Under-Dash Fuse/Relay Box) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : Go to step 5.

NO : **REPLACE THE UNDER-DASH FUSE/RELAY BOX** , then **do the repair verification** .

5. Determine possible failure area (+B ETCS line, others):
   - 1. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     ETCS control relay: disconnected

     Test circuit +B ETCS

     Test point 1 ETCS control relay 4P socket No. 1 (Under-dash fuse/relay box)

     Test point 2 Body ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

Is there battery voltage?

YES : Go to step 7.

NO : Go to step 6.

6. Open wire check (+B ETCS line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Under-dash fuse/relay box connector D (32P)

   - 3. Measure the voltage between test points 1 and 2.

     Test condition IG LOCK (0)

     ETCS control relay: disconnected

     Under-dash fuse/relay box connector D (32P): disconnected

     Test circuit +B ETCS

     Test point 1 Under-dash fuse/relay box connector D (32P) No. 5 (LT GRN)

     Test point 2 Body ground

<u>Fig. 316: Measuring Voltage Between Under-Dash Fuse/Relay Box Connector D (32P) No. 5 (LT GRN) And Body Ground</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The +B ETCS wire is OK. **<u>REPLACE THE UNDER-DASH FUSE/RELAY BOX</u>** , then **do the repair verification** .

NO : Repair an open in the +B ETCS wire between the No. A22 (15 A) fuse and the under-dash

GETtheMANUALS.org

fuse/relay box, then **do the repair verification** .

7. Open wire check (VBETCS/ETCS RLY OUT line):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Jump the SCS line with the HDS.
    - 3. Disconnect the following connector.

      PCM connector C (49P)

    - 4. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      ETCS control relay: disconnected

      PCM connector C (49P): disconnected

      Test circuit VBETCS/ETCS RLY OUT

      Test point 1 PCM connector C (49P) No. 1 (YEL)

      Test point 2 ETCS control relay 4P socket No. 2 (Under-dash fuse/relay box)

Fig. 317: Checking Continuity Between PCM Connector C (49P) No. 1 (YEL) And ETCS Control Relay 4P Socket No. 2 (Under-Dash Fuse/Relay Box)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The VBETCS/ETCS RLY OUT wire is OK. Go to step 8.

GETtheMANUALS.org

NO : Repair an open in the VBETCS/ETCS RLY OUT wire between the PCM (C1) and the ETCS control relay, then **do the repair verification** .

8. Open wire check (ETCS RLY CL- line):
   - 1. Disconnect the following connector.

     PCM connector A (49P)

   - 2. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     ETCS control relay: disconnected

     PCM connector C (49P): disconnected

     PCM connector A (49P): disconnected

     Test circuit ETCS RLY CL-

     Test point 1 PCM connector A (49P) No. 48 (PUR)

     Test point 2 ETCS control relay 4P socket No. 4 (Under-dash fuse/relay box)

Fig. 318: Checking Continuity Between PCM Connector A (49P) No. 48 (PUR) And ETCS Control Relay 4P Socket No. 4 (Under-Dash Fuse/Relay Box)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

GETtheMANUALS.org

YES : The ETCS RLY CL- wire is OK. **Update the PCM** See **PCM UPDATE** or **PCM REMOVAL AND INSTALLATION** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

NO : Repair an open in the ETCS RLY CL- wire between the PCM (A48) and the ETCS control relay, then **do the repair verification** .

9. Shorted wire check (VBETCS/ETCS RLY OUT line):
   - 1. Remove the ETCS control relay (A) from the under-hood fuse/relay box.

Fig. 319: Identifying ETCS Control Relay
Courtesy of AMERICAN HONDA MOTOR CO., INC.

   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connector.

     PCM connector C (49P)

   - 4. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     ETCS control relay: disconnected

     PCM connector C (49P): disconnected

     Test circuit VBETCS

     Test point 1 PCM connector C (49P) No. 1 (YEL)

     Test point 2 Body ground

GETtheMANUALS.org

Fig. 320: Checking Continuity Between PCM Connector C (49P) No. 1 (YEL) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short in the VBETCS/ETCS RLY OUT wire between the PCM (C1) and the ETCS control relay, then **do the repair verification** .

NO : The VBETCS/ETCS RLY OUT wire is OK. Go to step 10.

10. Determine possible failure area (+B ETCS line, PCM):
    - 1. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      ETCS control relay: disconnected

      PCM connector C (49P): disconnected

      Test circuit +B ETCS

      Test point 1 ETCS control relay 4P socket No. 1 (Under-dash fuse/relay box)

GETtheMANUALS.org

Is there continuity?

YES : Repair a short in the +B ETCS wire between the No. A22 (15 A) fuse and the under-dash fuse/relay box, then **do the repair verification** .

NO : The +B ETCS wire is OK. Check the under-dash fuse relay box, and **REPLACE IT** if needed, then **do the repair verification** .

REPAIR VERIFICATION

- 1. Turn the ignition switch to LOCK (0).
- 2. Reconnect all connectors.
- 3. Turn the ignition switch to ON (II).
- 4. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 5. **DO THE PCM IDLE LEARN PROCEDURE** .
- 6. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P1659 ETCS CONTROL RELAY OFF MALFUNCTION			

Is DTC P1659 indicated?

YES : Check for poor connections or loose terminals at the ETCS control relay and the PCM. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then recheck. If the PCM was substituted, go to step 1.

NO : Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

DTC P1683: THROTTLE VALVE DEFAULT POSITION SPRING PERFORMANCE PROBLEM

GETtheMANUALS.org

DTC Troubleshooting: P1683

Fig. 323: DTC Troubleshooting Flow Chart (P1683)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

CAUTION: Do not insert your fingers into the installed throttle body when you turn the ignition switch to ON (II), or while the ignition switch is in ON (II). If you do, you will seriously injure your fingers if the throttle valve is activated.

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P1683 THROTTLE VALVE DEFAULT POSITION SPRING PERFORMANCE PROBLEM			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).

GETtheMANUALS.org

- 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 3. Start the engine. Hold the engine speed at 3, 000 rpm without load (in P or N) until the radiator fan comes on, then let it idle.
- 4. Turn the ignition switch to LOCK (0), and wait 10 seconds.
- 5. Turn the ignition switch to ON (II).
- 6. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P1683 THROTTLE VALVE DEFAULT POSITION SPRING PERFORMANCE PROBLEM			

Is DTC P1683 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the throttle body and the PCM.

2. Throttle body default position spring check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the intake air duct from the throttle body.
   - 3. Push the throttle valve closed as shown.

Fig. 324: Pushing Throttle Valve
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 4. Release the throttle valve.

Does the throttle valve return?

YES : **Clean the throttle body** See **THROTTLE BODY REMOVAL AND INSTALLATION** ,

GETtheMANUALS.org

THROTTLE BODY DISASSEMBLY AND REASSEMBLY or **THROTTLE BODY CLEANING** , then **do the repair verification** . If DTC P1683 is indicated, **replace the throttle body** See **THROTTLE BODY REMOVAL AND INSTALLATION** , **THROTTLE BODY CLEANING** or **THROTTLE BODY DISASSEMBLY AND REASSEMBLY** , then **do the repair verification** .

NO : **Replace the throttle body** See **THROTTLE BODY DISASSEMBLY AND REASSEMBLY** , **THROTTLE BODY REMOVAL AND INSTALLATION** or **THROTTLE BODY CLEANING** , then **do the repair verification** .

REPAIR VERIFICATION

- 1. Turn the ignition switch to ON (II).
- 2. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 3. **DO THE PCM IDLE LEARN PROCEDURE** .
- 4. Turn the ignition switch to LOCK (0), and wait 10 seconds.
- 5. Turn the ignition switch to ON (II).
- 6. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P1683 THROTTLE VALVE DEFAULT POSITION SPRING PERFORMANCE PROBLEM			

Is DTC P1683 indicated?

YES : Check for poor connections or loose terminals at the throttle body and the PCM, then go to step 1.

NO : Troubleshooting is complete. If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

DTC P1684: THROTTLE VALVE RETURN SPRING PERFORMANCE PROBLEM

GETtheMANUALS.org

DTC Troubleshooting: P1684

Fig. 325: DTC Troubleshooting Flow Chart (P1684)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

CAUTION: Do not insert your fingers into the installed throttle body when you turn the ignition switch to ON (II), or while the ignition switch is in ON (II). If you do, you will seriously injure your fingers if the throttle valve is activated.

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P1684 THROTTLE VALVE RETURN SPRING PERFORMANCE PROBLEM			

1. Throttle body return spring check:
   - 1. Turn the ignition switch to ON (II).

GETtheMANUALS.org

- 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 3. Start the engine. Hold the engine speed at 3, 000 rpm without load (in P or N) until the radiator fan comes on, then let it idle.
- 4. Turn the ignition switch to LOCK (0), and wait 10 seconds.

P1684 THROTTLE VALVE RETURN SPRING PERFORMANCE PROBLEM			

Is DTC P1684 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the throttle body and the PCM.

2. Throttle body condition check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the intake air duct from the throttle body.
   - 3. Push the throttle valve open as shown.

Fig. 326: Pushing Throttle Valve
Courtesy of AMERICAN HONDA MOTOR CO., INC.

   - 4. Release the throttle valve.

Does the throttle valve return?

YES : **Clean the throttle body** See **THROTTLE BODY DISASSEMBLY AND REASSEMBLY** ,

GETtheMANUALS.org

THROTTLE BODY REMOVAL AND INSTALLATION or **THROTTLE BODY CLEANING** , then **do the repair verification** . If DTC P1684 is indicated, **replace the throttle body** See **THROTTLE BODY DISASSEMBLY AND REASSEMBLY** , **THROTTLE BODY REMOVAL AND INSTALLATION** or **THROTTLE BODY CLEANING** , then **do the repair verification** .

NO : **Replace the throttle body** See **THROTTLE BODY DISASSEMBLY AND REASSEMBLY** , **THROTTLE BODY REMOVAL AND INSTALLATION** or **THROTTLE BODY CLEANING** , then **do the repair verification** .

REPAIR VERIFICATION

- 1. Turn the ignition switch to ON (II).
- 2. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 3. **DO THE PCM IDLE LEARN PROCEDURE** .
- 4. Turn the ignition switch to LOCK (0), and wait 10 seconds.
- 5. Turn the ignition switch to ON (II).
- 6. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P1684 THROTTLE VALVE RETURN SPRING PERFORMANCE PROBLEM			

Is DTC P1684 indicated?

YES : Check for poor connections or loose terminals at the throttle body and the PCM, then go to step 1.

NO : Troubleshooting is complete. If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

DTC P16BB: ALTERNATOR B TERMINAL CIRCUIT LOW VOLTAGE

GETtheMANUALS.org

DTC Troubleshooting: P16BB

Fig. 327: DTC Troubleshooting Flow Chart (P16BB)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P16BB ALTERNATOR B TERMINAL CIRCUIT LOW VOLTAGE			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .

GETtheMANUALS.org

- 3. Start the engine.
- 4. Check under these conditions:
  - A/C on
  - Temperature control at maximum cool
  - Blower fan at maximum speed
  - Headlights on high beam
  - Rear window defogger on
- Hold the engine speed at 2, 000 rpm (in P or N) for 1 minute.
- Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P16BB ALTERNATOR B TERMINAL CIRCUIT LOW VOLTAGE			

Is DTC P16BB indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the alternator and the under-hood fuse/relay box. Also check the battery performance.

2. +B terminal check:
   - 1. Check for poor connections or loose terminals at the alternator and the under-hood fuse/relay box (+B line).

Are the connections and terminals OK?

YES : Go to step 3.

NO : Repair the connections or the terminals, then **do the repair verification** .

3. Open wire check (+B line):
   - 1. Check for an open in the wire between the alternator and the under-hood fuse/relay box at the engine harness.

Is the harness OK?

YES : **Replace the alternator** See **ALTERNATOR OVERHAUL** or **ALTERNATOR REMOVAL AND INSTALLATION** , then **do the repair verification** .

NO : Repair an open in the +B wire between the alternator and the under-hood fuse/relay box, then **do the repair verification** .

GETtheMANUALS.org

REPAIR VERIFICATION

- 1. Turn the ignition switch to ON (II).
- 2. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 3. **DO THE PCM IDLE LEARN PROCEDURE** .
- 4. Start the engine.
- 5. Check under these conditions:
  - A/C on
  - Temperature control at maximum cool
  - Blower fan at maximum speed
  - Headlights on high beam
  - Rear window defogger on
- Hold the engine speed at 2, 000 rpm (in P or N) for 1 minute.
- Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P16BB ALTERNATOR B TERMINAL CIRCUIT LOW VOLTAGE			

Is DTC P16BB indicated?

YES : Check for poor connections or loose terminals at the alternator and the under-hood fuse/relay box, then go to step 1.

NO : Troubleshooting is complete. If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

DTC P16E2: PGM-FI-ACG LIN COMMUNICATION ERROR

GETtheMANUALS.org

DTC Troubleshooting: P16E2

Fig. 328: DTC Troubleshooting Flow Chart (P16E2)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and**

GETtheMANUALS.org

review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P16E2 PGM-FI-ACG LIN COMMUNICATION ERROR			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** , and wait for 10 seconds.
   - 3. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P16E2 PGM-FI-ACG LIN COMMUNICATION ERROR			

Is DTC P16E2 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the alternator, the battery sensor, and the PCM.

2. DTC Check:
   - 1. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P16E3 PGM-FI-BATTERY SENSOR LIN COMMUNICATION ERROR			

Is DTC P16E3 indicated?

YES : Go to step 3.

NO : Go to step 7.

3. Determine possible failure area (LIN(BATT SENSOR)/LIN circuit shorted, others):
   - 1. Turn the ignition switch to LOCK (0).

GETtheMANUALS.org

- 2. Disconnect the following connector.

  Alternator 1P connector

- 3. Check for continuity between test points 1 and 2.

  Test condition IG LOCK (0)

  Alternator 1P connector: disconnected

  Test circuit LIN

  Test point 1 Alternator 1P connector No. 1 (TAN)

  Test point 2 Body ground

Fig. 329: Checking Continuity Between Alternator 1P Connector No. 1 (TAN) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Go to step 4.

NO : Go to step 5.

4. Shorted wire check (LIN(BATT SENSOR)/LIN line):
   - 1. Jump the SCS line with the HDS.
   - 2. Continue to check for continuity between the alternator 1P connector terminal and body ground, while disconnecting these connectors, one at a time:
     - Battery sensor 2P connector
     - PCM connector B (49P)

Does continuity go away when one of the above connectors is disconnected?

YES : The LIN(BATT SENSOR)/LIN wire is OK. Replace the part that caused an open when it was disconnected, then **do the repair verification** .

GETtheMANUALS.org

NO : Repair a short in the LIN(BATT SENSOR)/LIN wire between the battery sensor, the alternator, and the PCM (B16), then **do the repair verification** .

5. Determine possible failure area (alternator, others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Reconnect the alternator 1P connector
   - 3. Disconnect the following connector.

     Battery sensor 2P connector

   - 4. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Battery sensor 2P connector: disconnected

     Test circuit LIN(BATT SENSOR)

     Test point 1 Battery sensor 2P connector No. 2 (BLU)

     Test point 2 Body ground

Fig. 330: Checking Continuity Between Battery Sensor 2P Connector No. 2 (BLU) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : **Replace the alternator** See **ALTERNATOR OVERHAUL** or **ALTERNATOR REMOVAL AND INSTALLATION** , then **do the repair verification** .

NO : Go to step 6.

6. Open wire check (LIN line):
   - 1. Jump the SCS line with the HDS.
   - 2. Disconnect the following connector.

GETtheMANUALS.org

Alternator 1P connector

PCM connector B (49P)

- 3. Check for continuity between test points 1 and 2.

  Test condition IG LOCK (0)

  Battery sensor 2P connector: disconnected

  Alternator 1P connector: disconnected

  PCM connector B (49P): disconnected

  Test circuit LIN

  Test point 1 PCM connector B (49P) No. 16 (TAN)

  Test point 2 Alternator 1P connector No. 1 (TAN)

Fig. 331: Checking Continuity Between PCM Connector B (49P) No. 16 (TAN) And Alternator 1P Connector No. 1 (TAN)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The LIN wire is OK. **Update the PCM** See **PCM UPDATE** or **PCM REMOVAL AND INSTALLATION** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

GETtheMANUALS.org

NO : Repair an open in the LIN wire between the alternator and the PCM (B16), then **do the repair verification** .

7. Open wire check (LIN line):
    - 1. Jump the SCS line with the HDS.
    - 2. Disconnect the following connectors.

      Alternator 1P connector

      PCM connector B (49P)

    - 3. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      Alternator 1P connector: disconnected

      PCM connector B (49P): disconnected

      Test circuit LIN

      Test point 1 PCM connector B (49P) No. 16 (TAN)

      Test point 2 Alternator 1P connector No. 1 (TAN)

Fig. 332: Checking Continuity Between PCM Connector B (49P) No. 16 (TAN) And Alternator 1P Connector No. 1 (TAN)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

GETtheMANUALS.org

YES : The LIN wire is OK. **Replace the alternator** See **ALTERNATOR OVERHAUL** or **ALTERNATOR REMOVAL AND INSTALLATION** , then **do the repair verification** .

NO : Repair an open in the LIN wire between the alternator and the PCM (B16), then **do the repair verification** .

REPAIR VERIFICATION

- 1. Turn the ignition switch to LOCK (0).
- 2. Reconnect all connectors.
- 3. Turn the ignition switch to ON (II)
- 4. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** or **HOW TO TROUBLESHOOT THE A/T SYSTEM** .
- 5. **DO THE PCM IDLE LEARN PROCEDURE** .
- 6. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P16E2 PGM-FI-ACG LIN COMMUNICATION ERROR			

Is DTC P16E2 indicated?

YES : Check for poor connections or loose terminals at the alternator, the battery sensor, and the PCM. If the PCM was updated, **substitute a known-good PCM** See **PCM UPDATE** or **PCM REMOVAL AND INSTALLATION** , then recheck. If the PCM was substituted, go to step 1.

NO : Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM UPDATE** or **PCM REMOVAL AND INSTALLATION** . If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

DTC P16E3: PGM-FI-BATTERY SENSOR LIN COMMUNICATION ERROR

GETtheMANUALS.org

DTC Troubleshooting: P16E3

Fig. 333: DTC Troubleshooting Flow Chart (P16E3)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board**

GETtheMANUALS.org

snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .

- **Check for loose terminals on the battery sensor (battery negative (-) terminal).**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P16E3 PGM-FI-BATTERY SENSOR LIN COMMUNICATION ERROR			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** , and wait for 10 seconds.
   - 3. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P16E3 PGM-FI-BATTERY SENSOR LIN COMMUNICATION ERROR			

Is DTC P16E3 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the alternator, the battery sensor, and the PCM.

2. DTC Check:
   - 1. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P16E2 PGM-FI-ACG LIN COMMUNICATION ERROR			

Is DTC P16E2 indicated?

YES : Go to step 3.

NO : Go to step 7.

GETtheMANUALS.org

3. Determine possible failure area (LIN(BATT SENSOR)/LIN circuit shorted, others):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Disconnect the following connector.

      Battery sensor 2P connector

    - 3. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      Battery sensor 2P connector: disconnected

      Test circuit LIN(BATT SENSOR)

      Test point 1 Battery sensor 2P connector No. 2 (BLU)

      Test point 2 Body ground

Fig. 334: Checking Continuity Between Battery Sensor 2P Connector No. 2 (BLU) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Go to step 4.

NO : Go to step 5.

4. Shorted wire check (LIN line):
    - 1. Jump the SCS line with the HDS.
    - 2. Continue to check for continuity between battery sensor 2P connector terminal No. 2 and body ground, while disconnecting these connectors, one at a time:
        - Alternator 1P connector
        - PCM connector B (49P)

Does continuity go away when one of the above connectors is disconnected?

GETtheMANUALS.org

YES : The LIN wire is OK. Replace the part that caused an open when it was disconnected, then **do the repair verification** .

NO : Repair a short in the LIN wire between the battery sensor, the alternator, and the PCM (B16), then **do the repair verification** .

5. Determine possible failure area (battery sensor, others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Reconnect the battery sensor 2P connector.
   - 3. Disconnect the following connector.

     Alternator 1P connector

   - 4. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Alternator 1P connector: disconnected

     Test circuit LIN

     Test point 1 Alternator 1P connector No. 1 (TAN)

     Test point 2 Body ground

Fig. 335: Checking Continuity Between Alternator 1P Connector No. 1 (TAN) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : **REPLACE THE BATTERY SENSOR** , then **do the repair verification** .

NO : Go to step 6.

6. Open wire check (LIN(BATT SENSOR)/LIN line):
   - 1. Jump the SCS line with the HDS.

GETtheMANUALS.org

- 2. Disconnect the following connector.

  Battery sensor 2P connector

  PCM connector B (49P)

- 3. Check for continuity between test points 1 and 2.

  Test condition IG LOCK (0)

  Alternator 1P connector: disconnected

  Battery sensor 2P connector: disconnected

  PCM connector B (49P): disconnected

  Test circuit LIN(BATT SENSOR)/LIN

  Test point 1 PCM connector B (49P) No. 16 (TAN)

  Test point 2 Battery sensor 2P connector No. 2 (BLU)

Fig. 336: Checking Continuity Between PCM Connector B (49P) No. 16 (TAN) And Battery Sensor 2P Connector No. 2 (BLU)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The LIN(BATT SENSOR)/LIN wire is OK. **Update the PCM** See **PCM REMOVAL AND**

GETtheMANUALS.org

INSTALLATION or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

NO : Repair an open in the LIN(BATT SENSOR)/LIN wire between the battery sensor and the PCM (B16), then **do the repair verification** .

7. Fuse check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check the following fuse.

     Fuse No. A14 (10 A)

     Location Under-hood fuse/relay box

Is the fuse OK?

YES : The fuse is OK. Go to step 8.

NO : Repair a short in the +B HORN wire between the battery sensor and the under-hood fuse/relay box, and replace the No. A14 (10 A) fuse, then **do the repair verification** .

8. Open wire check (+B HORN line):
   - 1. Disconnect the following connector.

     Battery sensor 2P connector

   - 2. Measure the voltage between test points 1 and 2.

     Test condition IG LOCK (0)

     Battery sensor 2P connector: disconnected

     Test circuit +B HORN

     Test point 1 Battery sensor 2P connector No. 1 (WHT)

     Test point 2 Body ground

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The +B HORN wire is OK. Go to step 9.

NO : Repair an open in the +B HORN wire between the battery sensor and No. A14 (7.5 A) fuse in the under-hood fuse/relay box, then **do the repair verification** .

9. Open wire check (LIN(BATT SENSOR)/LIN line):
   - 1. Jump the SCS line with the HDS.
   - 2. Disconnect the following connector.

     PCM connector B (49P)

   - 3. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Test circuit LIN(BATT SENSOR)/LIN

     Battery sensor 2P connector: disconnected

     PCM connector B (49P): disconnected

     Test point 1 PCM connector B (49P) No. 16 (TAN)

     Test point 2 Battery sensor 2P connector No. 2 (BLU)

GETtheMANUALS.org

Fig. 338: Checking Continuity Between PCM Connector B (49P) No. 16 (TAN) And Battery Sensor 2P Connector No. 2 (BLU)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The LIN(BATT SENSOR) wire is OK. **REPLACE THE BATTERY SENSOR** , then **do the repair verification** .

NO : Repair an open in the LIN(BATT SENSOR)/LIN wire between the battery sensor and the PCM (B16), then **do the repair verification** .

REPAIR VERIFICATION

- 1. Turn the ignition switch to LOCK (0).
- 2. Reconnect all connectors.
- 3. Turn the ignition switch to ON (II)
- 4. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 5. **DO THE PCM IDLE LEARN PROCEDURE** .
- 6. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P16E3 PGM-FI-BATTERY SENSOR LIN COMMUNICATION ERROR			

Is DTC P16E3 indicated?

GETtheMANUALS.org

YES : Check for poor connections or loose terminals at the alternator, the battery sensor, and the PCM. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then recheck. If the PCM was substituted, go to step 1.

NO : Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM UPDATE** or **PCM REMOVAL AND INSTALLATION** . If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

DTC P16E4: ACG HIGH-TEMPERATURE

Fig. 339: DTC Troubleshooting Flow Chart (P16E4)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**
- **This DTC is stored when the alternator temperature is high (about 320 °F (160 °C) or more).**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P16E4 ACG HIGH-TEMPERATURE			

1. Problem verification:
   - 1. If the temperature of the engine and the alternator is high, open the hood to cool the engine compartment.
   - 2. Turn the ignition switch to ON (II).
   - 3. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 4. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P16E4 ACG HIGH-TEMPERATURE			

GETtheMANUALS.org

Is DTC P16E4 indicated?

YES : **Replace the alternator** See **ALTERNATOR OVERHAUL** or **ALTERNATOR REMOVAL AND INSTALLATION** .

NO : Check the cause of the high temperature, and repair it.

DTC P2101: ETCS MALFUNCTION

GETtheMANUALS.org

DTC Troubleshooting: P2101

Fig. 340: DTC Troubleshooting Flow Chart (P2101)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

CAUTION: Do not insert your fingers into the installed throttle body when you turn the ignition switch to ON (II), or while the ignition switch is in ON (II). If you do, you will seriously injure your fingers if the throttle valve is activated.

GETtheMANUALS.org

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P2101 ETCS MALFUNCTION			

1. ETCS system check:
   - 1. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 3. Do the ETCS TEST with the HDS.
   - 4. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P2101 ETCS MALFUNCTION			

Is DTC P2101 indicated?

YES : The failure is duplicated. Go to step 3.

NO : The failure is not duplicated. Go to step 2.

2. Problem verification:
   - 1. Test-drive the vehicle for several minutes in the range of these recorded freeze data parameters:
     - ENGINE SPEED
     - VEHICLE SPEED
     - APP SENSOR

Signal	Current conditions	
	Values	Unit
ENGINE SPEED		
VEHICLE SPEED		
APP SENSOR		

   - Check for Pending or Confirmed DTCs with the HDS.

Is DTC P2101 indicated?

YES : The failure is duplicated. Go to step 3.

NO : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at

GETtheMANUALS.org

the throttle body and the PCM.

3. Determine possible failure area (throttle body, others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the intake air duct from the throttle body.
   - 3. Turn the ignition switch to ON (II).
   - 4. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 5. Visually check the throttle valve operation while doing the ETCS TEST in the INSPECTION MENU with the HDS.

   Does the throttle valve operate smoothly?

   YES : **Clean the throttle body** See **THROTTLE BODY DISASSEMBLY AND REASSEMBLY** , **THROTTLE BODY CLEANING** or **THROTTLE BODY REMOVAL AND INSTALLATION** , then **do the repair verification** . If DTC P2101 is indicated, **replace the throttle body** See **THROTTLE BODY DISASSEMBLY AND REASSEMBLY** , **THROTTLE BODY REMOVAL AND INSTALLATION** or **THROTTLE BODY CLEANING** , then **do the repair verification** .

   NO : Go to step 4.

4. Open wire check (MTR1 line, MTR2 line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connectors.

     PCM connector C (49P)

     Throttle body 6P connector

   - 4. Connect terminals A and B with a jumper wire.

     Terminal A Throttle body 6P connector No. 1 (PNK)

     Terminal B Throttle body 6P connector No. 2 (GRN)

GETtheMANUALS.org

Fig. 341: Connecting Wire Between Throttle Body 6P Connector No. 1 (PNK) And No. 2 (GRN)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 5. Check for continuity between test points 1 and 2.

  Test condition IG LOCK (0)

  PCM connector C (49P): disconnected

  Throttle body 6P connector: disconnected

  Throttle body 6P connector No. 1 and No. 2: jumped

  Test circuit MTR1, MTR2

  Test point 1 PCM connector C (49P) No. 3 (GRN)

  Test point 2 PCM connector C (49P) No. 4 (PNK)

Fig. 342: Checking Continuity Between PCM Connector C (49P) No. 3 (GRN) And No. 4 (PNK)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The MTR1 and MTR2 wires are OK. Go to step 5.

NO : Repair an open in the MTR1 wire or MTR2 wire between the PCM (C3, C4) and the throttle body, then **do the repair verification** .

5. Throttle body internal circuit check:
   - 1. At the throttle body side, measure the resistance between test points 1 and 2.

     Test condition IG LOCK (0)

     PCM connector C (49P): disconnected

GETtheMANUALS.org

Throttle body 6P connector: disconnected

Test circuit MTR1, MTR2

Test point 1 Throttle body 6P connector No. 1 (throttle body side)

Test point 2 Throttle body 6P connector No. 2 (throttle body side)

Fig. 343: Measuring Resistance Between Throttle Body 6P Connector No. 1 And No. 2 (Throttle Body Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 1.0 kohms or more?

YES : **Replace the throttle body** See **THROTTLE BODY DISASSEMBLY AND REASSEMBLY** , **THROTTLE BODY REMOVAL AND INSTALLATION** or **THROTTLE BODY CLEANING** , then **do the repair verification** .

NO : The throttle body internal circuit is OK. **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM UPDATE** or **PCM REMOVAL AND INSTALLATION** , then **do the repair verification** .

REPAIR VERIFICATION

- 1. Turn the ignition switch to LOCK (0).
- 2. Reconnect all connectors.
- 3. Turn the ignition switch to ON (II).
- 4. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 5. **DO THE PCM IDLE LEARN PROCEDURE** .
- 6. Test-drive the vehicle for several minutes in the range of these recorded freeze data parameters:
  - ENGINE SPEED
  - VEHICLE SPEED
  - APP SENSOR

	Current conditions

GETtheMANUALS.org

Signal	Values	Unit
ENGINE SPEED		
VEHICLE SPEED		
APP SENSOR		

- Check for Pending or Confirmed DTCs with the HDS.

Is DTC P2101 indicated?

YES : Check for poor connections or loose terminals at the throttle body and the PCM, and **clean the throttle body** See **THROTTLE BODY DISASSEMBLY AND REASSEMBLY** , **THROTTLE BODY REMOVAL AND INSTALLATION** or **THROTTLE BODY CLEANING** , then go to step 1. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then recheck. If the PCM was substituted, go to step 1.

NO : Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P2118 THROTTLE ACTUATOR CURRENT RANGE/PERFORMANCE PROBLEM			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 3. Slowly press the accelerator pedal to the floor.
   - 4. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P2118 THROTTLE ACTUATOR CURRENT RANGE/PERFORMANCE PROBLEM			

Is DTC P2118 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the throttle body and the PCM, then **clean the throttle body** See **THROTTLE BODY DISASSEMBLY AND REASSEMBLY** , **THROTTLE BODY CLEANING** or **THROTTLE BODY REMOVAL AND INSTALLATION** .

2. Open wire check (SG3(ETCS) line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connectors.

     PCM connector C (49P)

     Throttle body 6P connector

   - 4. Check for continuity between test points 1 and 2.

GETtheMANUALS.org

Test condition IG LOCK (0)

PCM connector C (49P): disconnected

Throttle body 6P connector: disconnected

Test circuit SG3(ETCS)

Test point 1 PCM connector C (49P) No. 14 (GRY)

Test point 2 Throttle body 6P connector No. 3 (GRY)

Fig. 345: Checking Continuity Between PCM Connector C (49P) No. 14 (GRY) And Throttle Body 6P Connector No. 3 (GRY)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The SG3(ETCS) wire is OK. Go to step 3.

NO : Repair an open in the SG3(ETCS) wire between the PCM (C14) and the throttle body, then **do the repair verification** .

3. Shorted wire check (MTR1 line to MTR2 line):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     PCM connector C (49P): disconnected

GETtheMANUALS.org

Throttle body 6P connector: disconnected

Test circuit MTR1, MTR2

Test point 1 Throttle body 6P connector No. 1 (PNK)

Test point 2 Throttle body 6P connector No. 2 (GRN)

Fig. 346: Checking Continuity Between Throttle Body 6P Connector No. 1 (PNK) And No. 2 (GRN)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short in the MTR1 and MTR2 wires between the throttle body and the PCM (C3, C4), then **do the repair verification** .

NO : Go to step 4.

4. Shorted wire check (MTR1, MTR2 line to ground):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     PCM connector C (49P): disconnected

     Throttle body 6P connector: disconnected

     Test circuit MTR1

     Test point 1 Throttle body 6P connector No. 2 (GRN)

     Test point 2 Body ground

     Test circuit MTR2

     Test point 1 Throttle body 6P connector No. 1 (PNK)

GETtheMANUALS.org

Test point 2 Body ground

Fig. 347: Checking Continuity Between Throttle Body 6P Connector No. 1 (PNK) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to ground in the MTR1, MTR2 wire between the throttle body and the PCM (C3, C4), then **do the repair verification** .

NO : The MTR1, MIR2 wires are OK. Go to step 5.

5. Throttle body internal circuit check (short in wires):
   - 1. At the throttle body side, measure the resistance between test points 1 and 2.

     Test condition IG LOCK (0)

     PCM connector C (49P): disconnected

     Throttle body 6P connector: disconnected

     Test circuit MTR1, MTR2

     Test point 1 Throttle body 6P connector No. 1 (throttle body side)

     Test point 2 Throttle body 6P connector No. 2 (throttle body side)

Fig. 348: Measuring Resistance Between Throttle Body 6P Connector No. 1 And No. 2

GETtheMANUALS.org

(Throttle Body Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 1.2 ohms -1.0 k ohms?

YES : Go to step 6.

NO : **Replace the throttle body** See **THROTTLE BODY DISASSEMBLY AND REASSEMBLY** , **THROTTLE BODY REMOVAL AND INSTALLATION** or **THROTTLE BODY CLEANING** , then **do the repair verification** .

6. Throttle body internal circuit check (short to ground):
   - 1. At the throttle body side, measure the resistance between test points 1 and 2.

     Test condition IG LOCK (0)

     PCM connector C (49P): disconnected

     Throttle body 6P connector: disconnected

     Test circuit MTR1

     Test point 1 Throttle body 6P connector No. 2 (throttle body side)

     Test point 2 Body ground

     Test circuit MTR2

     Test point 1 Throttle body 6P connector No. 1 (throttle body side)

     Test point 2 Body ground

Fig. 349: Measuring Resistance Between Throttle Body 6P Connector No. 1 And No. 2 (Throttle Body Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

GETtheMANUALS.org

YES : **Replace the throttle body** See **THROTTLE BODY DISASSEMBLY AND REASSEMBLY** , **THROTTLE BODY REMOVAL AND INSTALLATION** or **THROTTLE BODY CLEANING** , then **do the repair verification** .

NO : The throttle body internal circuit is OK. **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

REPAIR VERIFICATION

- 1. Turn the ignition switch to LOCK (0).
- 2. Reconnect all connectors.
- 3. Turn the ignition switch to ON (II).
- 4. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 5. **DO THE PCM IDLE LEARN PROCEDURE** .
- 6. Slowly press the accelerator pedal to the floor.
- 7. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P2118 THROTTLE ACTUATOR CURRENT RANGE/PERFORMANCE PROBLEM			

Is DTC P2118 indicated?

YES : Check for poor connections or loose terminals at the throttle body and the PCM. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then recheck. If the PCM was substituted, go to step 1.

NO : Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

DTC P2122: APP SENSOR A (TP SENSOR D) CIRCUIT LOW VOLTAGE

GETtheMANUALS.org

DTC Troubleshooting: P2122

Fig. 350: DTC Troubleshooting Flow Chart (P2122)

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P2122 APP SENSOR A CIRCUIT LOW VOLTAGE			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
APP SENSOR A	Less than 0.2	V		

Do the current condition(s) match the threshold?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the APP sensor and the PCM.

2. Determine possible failure area (VCC4 line, others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     APP sensor 6P connector

   - 3. Turn the ignition switch to ON (II).
   - 4. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     APP sensor 6P connector: disconnected

     Test circuit VCC4, SG4

     Test point 1 APP sensor 6P connector No. 4 (BRN)

     Test point 2 APP sensor 6P connector No. 5 (LT BLU)

GETtheMANUALS.org

Fig. 351: Measuring Voltage Between APP Sensor 6P Connector No. 4 (BRN) And No. 5 (LT BLU)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5.0 V?

YES : Go to step 3.

NO : Go to step 6.

3. Shorted wire check (APS1 line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connector.

     PCM connector A (49P)

   - 4. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     APP sensor 6P connector: disconnected

     PCM connector A (49P): disconnected

     Test circuit APS1

     Test point 1 APP sensor 6P connector No. 6 (ORN)

     Test point 2 Body ground

GETtheMANUALS.org

Fig. 352: Checking Continuity Between APP Sensor 6P Connector No. 6 (ORN) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short in the APS1 wire between the PCM (A28) and the APP sensor, then **do the repair verification** .

NO : The APS1 wire is not shorted. Go to step 4.

4. Open wire check (APS1 line):
   - 1. Connect terminals A and B with a jumper wire.

     Terminal A APP sensor 6P connector No. 6 (ORN)

     Terminal B Body ground

Fig. 353: Connecting Wire Between APP Sensor 6P Connector No. 6 (ORN) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

   - 2. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     APP sensor 6P connector: disconnected

     APP sensor 6P connector No. 6: jumped to body ground

GETtheMANUALS.org

PCM connector A (49P): disconnected

Test circuit APS1

Test point 1 PCM connector A (49P) No. 28 (ORN)

Test point 2 Body ground

Fig. 354: Checking Continuity Between PCM Connector A (49P) No. 28 (ORN) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The APS1 wire is OK. Go to step 5.

NO : Repair an open in the APS1 wire between the PCM (A28) and the APP sensor, then **do the repair verification** .

5. PCM internal circuit check:
   - 1. Reconnect the following connector.

     PCM connector A (49P)

   - 2. Connect terminals A and B with a jumper wire.

     Terminal A APP sensor 6P connector No. 4 (BRN)

     Terminal B APP sensor 6P connector No. 6 (ORN)

GETtheMANUALS.org

Fig. 355: Connecting Wire Between APP Sensor 6P Connector No. 4 (BRN) And No. 6 (ORN) Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 3. Turn the ignition switch to ON (II).
- 4. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
APP SENSOR A	Less than 0.2	V		

Do the current condition(s) match the threshold?

YES : **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

NO : **REPLACE THE APP SENSOR** , then **do the repair verification** .

6. Open wire check (VCC4 line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connector.

     PCM connector A (49P)

   - 4. Connect terminals A and B with a jumper wire.

     Terminal A APP sensor 6P connector No. 4 (BRN)

     Terminal B Body ground

GETtheMANUALS.org

Fig. 356: Connecting Wire Between APP Sensor 6P Connector No. 4 (BRN) And Body Ground

- 5. Check for continuity between test points 1 and 2.

  Test condition IG LOCK (0)

  APP sensor 6P connector: disconnected

  APP sensor 6P connector No. 4: jumped to body ground

  PCM connector A (49P): disconnected

  Test circuit VCC4

  Test point 1 PCM connector A (49P) No. 36 (BRN)

  Test point 2 Body ground

Fig. 357: Checking Continuity Between PCM Connector A (49P) No. 36 (BRN) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The VCC4 wire is OK. **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM**

GETtheMANUALS.org

REMOVAL AND INSTALLATION or **PCM UPDATE** , then **do the repair verification** .

NO : Repair an open in the VCC4 wire between the PCM (A36) and the APP sensor, then **do the repair verification** .

REPAIR VERIFICATION

- 1. Turn the ignition switch to LOCK (0).
- 2. Reconnect all connectors.
- 3. Turn the ignition switch to ON (II).
- 4. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 5. **DO THE PCM IDLE LEARN PROCEDURE** .
- 6. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P2122 APP SENSOR A CIRCUIT LOW VOLTAGE			

Is DTC P2122 indicated?

YES : Check for poor connections or loose terminals at the APP sensor and the PCM. If the PCM was updated, **substitute a known-good PCM** See **PCM UPDATE** or **PCM REMOVAL AND INSTALLATION** , then recheck. If the PCM was substituted, go to step 1.

NO : Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

APP SENSOR B	More than 4.0	V		

Do the current condition(s) match the threshold?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the APP sensor and the PCM.

2. Determine possible failure area (APP sensor, others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     APP sensor 6P connector

   - 3. Turn the ignition switch to ON (II).
   - 4. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     APP sensor 6P connector: disconnected

     Test circuit VCC5, SG5

     Test point 1 APP sensor 6P connector No. 1 (LT GRN)

     Test point 2 APP sensor 6P connector No. 2 (YEL)

Fig. 371: Measuring Voltage Between APP Sensor 6P Connector No. 1 (LT GRN) And No. 2 (YEL)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5.0 V?

YES : **REPLACE THE APP SENSOR** , then **do the repair verification** .

NO : There is a problem in the SG5 line. Go to step 3.

GETtheMANUALS.org

3. Open wire check (SG5 line):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Jump the SCS line with the HDS.
    - 3. Disconnect the following connector.

      PCM connector A (49P)

    - 4. Connect terminals A and B with a jumper wire.

      Terminal A APP sensor 6P connector No. 2 (YEL)

      Terminal B Body ground

Fig. 372: Connecting Wire Between APP Sensor 6P Connector No. 2 (YEL) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    - 5. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      APP sensor 6P connector: disconnected

      APP sensor 6P connector No. 2: jumped to body ground

      PCM connector A (49P): disconnected

      Test circuit SG5

      Test point 1 PCM connector A (49P) No. 45 (YEL)

      Test point 2 Body ground

GETtheMANUALS.org

Fig. 373: Checking Continuity Between PCM Connector A (49P) No. 45 (YEL) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The SG5 wire is OK. **Update the PCM** See **PCM UPDATE** or **PCM REMOVAL AND INSTALLATION** if it does not have the latest software, or **substitute a known-good PCM** See **PCM UPDATE** or **PCM REMOVAL AND INSTALLATION** , then **do the repair verification** .

NO : Repair an open in the SG5 wire between the PCM (A45) and the APP sensor, then **do the repair verification** .

REPAIR VERIFICATION

- 1. Turn the ignition switch to LOCK (0).
- 2. Reconnect all connectors.
- 3. Turn the ignition switch to ON (II).
- 4. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** or **HOW TO TROUBLESHOOT THE A/T SYSTEM** .
- 5. **DO THE PCM IDLE LEARN PROCEDURE** .
- 6. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P2128 APP SENSOR B CIRCUIT HIGH VOLTAGE			

Is DTC P2128 indicated?

YES : Check for poor connections or loose terminals at the APP sensor and the PCM. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then recheck. If the PCM was substituted, go to step 1.

NO : Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

GETtheMANUALS.org

DTC P2135: TP SENSOR A/B INCORRECT VOLTAGE CORRELATION

Fig. 374: DTC Troubleshooting Flow Chart (P2135)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

CAUTION: Do not insert your fingers into the installed throttle body when you turn the ignition switch to ON (II), or while the ignition switch is in ON (II). If you do, you will seriously injure your fingers if the throttle valve is activated.

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS or HOW TO TROUBLESHOOT THE A/T

GETtheMANUALS.org

SYSTEM .

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P2135 TP SENSOR A/B INCORRECT VOLTAGE CORRELATION			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 3. Do the ETCS TEST with the HDS.
   - 4. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P2135 TP SENSOR A/B INCORRECT VOLTAGE CORRELATION			

Is DTC P2135 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the throttle body and the PCM.

2. Throttle body operation check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the intake air duct from the throttle body.
   - 3. Turn the ignition switch to ON (II).
   - 4. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 5. Visually check the throttle valve operation.

Does the valve temporarily move to its fully closed position?

YES : **Replace the throttle body** See **THROTTLE BODY REMOVAL AND INSTALLATION** , **THROTTLE BODY DISASSEMBLY AND REASSEMBLY** or **THROTTLE BODY CLEANING** , then **do the repair verification** .

NO : Go to step 3.

3. Determine possible failure area (PCM, others):

GETtheMANUALS.org

- 1. Turn the ignition switch to LOCK (0).
- 2. Jump the SCS line with the HDS.
- 3. Disconnect the following connector.

  PCM connector C (49P)

- 4. Check for continuity between test points 1 and 2.

  Test condition IG LOCK (0)

  PCM connector C (49P): disconnected

  Test circuit TH 1, TH 2

  Test point 1 PCM connector C (49P) No. 30 (LT GRN)

  Test point 2 PCM connector C (49P) No. 31 (RED)

Fig. 375: Checking Continuity Between PCM Connector C (49P) No. 30 (LT GRN) And No. 31 (RED)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Go to step 4.

NO : **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

4. Shorted wire check (TH 1 line to TH 2 line):
   - 1. Disconnect the following connector.

     Throttle body 6P connector

   - 2. Check for continuity between test points 1 and 2.

GETtheMANUALS.org

Test condition IG LOCK (0)

PCM connector C (49P): disconnected

CAUTION: Do not insert your fingers into the installed throttle body when you turn the ignition switch to ON (II), or while the ignition switch is in ON (II). If you do, you will seriously injure your fingers if the throttle valve is activated.

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board**

GETtheMANUALS.org

snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .

- **If DTC P2135 is stored at the same time as DTC P2176, troubleshoot DTC P2135 first, then recheck for DTC P2176.**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P2176 THROTTLE ACTUATOR CONTROL SYSTEM IDLE POSITION NOT LEARNED			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 3. Turn the ignition switch to LOCK (0).
   - 4. Turn the ignition switch to ON (II), and wait 10 seconds.
   - 5. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P2176 THROTTLE ACTUATOR CONTROL SYSTEM IDLE POSITION NOT LEARNED			

Is DTC P2176 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the throttle body and the PCM, then clean the throttle body.

2. Throttle body operation check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the intake air duct from the throttle body.
   - 3. Turn the ignition switch to ON (II).
   - 4. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** or **HOW TO TROUBLESHOOT THE A/T SYSTEM** .
   - 5. Visually check the throttle valve operation while doing the ETCS TEST in the INSPECTION MENU with the HDS.

Does the throttle valve move to its fully closed position?

YES : Go to step 3.

GETtheMANUALS.org

NO : Go to step 4.

3. Throttle body condition check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. **Remove the throttle body** See **THROTTLE BODY DISASSEMBLY AND REASSEMBLY** , **THROTTLE BODY REMOVAL AND INSTALLATION** or **THROTTLE BODY CLEANING** .
   - 3. Check for carbon build up on the throttle valve.

   Is there carbon build up on the throttle valve?

   YES : **Clean the throttle body** See **THROTTLE BODY DISASSEMBLY AND REASSEMBLY** , **THROTTLE BODY REMOVAL AND INSTALLATION** or **THROTTLE BODY CLEANING** , then **do the repair verification** .

   NO : **Replace the throttle body** See **THROTTLE BODY DISASSEMBLY AND REASSEMBLY** , **THROTTLE BODY REMOVAL AND INSTALLATION** or **THROTTLE BODY CLEANING** , then **do the repair verification** .

4. Open wire check (MTR1 line, MTR2 line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connectors.

     PCM connector C (49P)

     Throttle body 6P connector

   - 4. Connect terminals A and B with a jumper wire.

     Terminal A Throttle body 6P connector No. 1 (PNK)

     Terminal B Throttle body 6P connector No. 2 (GRN)

- 6. Turn the ignition switch to LOCK (0).
- 7. Turn the ignition switch to ON (II), and wait 10 seconds.
- 8. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P2176 THROTTLE ACTUATOR CONTROL SYSTEM IDLE POSITION NOT LEARNED			

Is DTC P2176 indicated?

YES : Check for poor connections or loose terminals at the throttle body and the PCM, then **clean the throttle body** See **THROTTLE BODY REMOVAL AND INSTALLATION** , **THROTTLE BODY DISASSEMBLY AND REASSEMBLY** or **THROTTLE BODY CLEANING** , and go to step 1. If the PCM was updated, **substitute a known-good PCM** See **PCM UPDATE** or **PCM REMOVAL AND INSTALLATION** , then recheck. If the PCM was substituted, go to step 1.

NO : Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

DTC P2183: ECT SENSOR 2 CIRCUIT RANGE/PERFORMANCE PROBLEM

GETtheMANUALS.org

DTC Troubleshooting: P2183

GETtheMANUALS.org

Fig. 383: DTC Troubleshooting Flow Chart (P2183)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS or HOW TO TROUBLESHOOT THE A/T SYSTEM .**
- **If DTC P0111 is stored at the same time as DTC P2183, troubleshoot DTC P0111 first, then recheck for DTC P2183.**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P2183 ECT SENSOR 2 CIRCUIT RANGE/PERFORMANCE PROBLEM			

1. Connector visual check:
   - 1. Check for poor connections or loose terminals and terminals at these sensors:
     - ECT sensor 1
     - ECT sensor 2

   Are the connections and terminals OK?

   YES : Go to step 2.

   NO : Repair the connections or terminals, then **do the repair verification** .

2. PGM-FI system check:
   - 1. Turn the ignition switch to ON (II).
   - 2. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P1116 ECT SENSOR 1 CIRCUIT RANGE/PERFORMANCE PROBLEM			
P2183 ECT SENSOR 2 CIRCUIT RANGE/PERFORMANCE PROBLEM			

   Are DTC P1116 and P2183 indicated at the same time?

   YES : Go to step 5.

   NO : Only DTC P2183 is indicated. Go to step 3.

3. ECT sensor 2 performance check:

GETtheMANUALS.org

- 1. Start the engine, and let it idle for 10 minutes.
- 2. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
ECT SENSOR 2	Less than 120	°F		
	Less than 49	°C		

Do the current condition(s) match the threshold?

YES : **REPLACE ECT SENSOR 2** , then **do the repair verification** .

NO : Go to step 4.

4. Problem verification:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Allow ECT sensor 2 to cool to the ambient temperature.
   - 3. Note the ambient temperature.
   - 4. Turn the ignition switch to ON (II).
   - 5. Quickly note the value of ECT SENSOR 2 in the DATA LIST with the HDS.

Signal	Current conditions	
	Values	Unit
ECT SENSOR 2		

   - 6. Compare the value of ECT SENSOR 2 and the ambient temperature.

Does the value of ECT SENSOR 2 differ 5.4 °F (3 °C) or more from the ambient temperature?

YES : **REPLACE ECT SENSOR 2** , then **do the repair verification** .

NO : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at ECT sensor 1, ECT sensor 2, and the PCM.

5. ECT sensor 1 performance check:
   - 1. Start the engine, and let it idle for 10 minutes.
   - 2. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
ECT SENSOR 1	Less than 120	°F		
	Less than 49	°C		

GETtheMANUALS.org

Do the current condition(s) match the threshold?

YES : **REPLACE ECT SENSOR 1** , then **do the repair verification** .

NO : ECT sensor 1 is OK at this time. Go to step 6.

6. ECT sensor 2 performance check:
   - 1. Let the engine idle for 10 minutes.
   - 2. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
ECT SENSOR 2	Less than 120	°F		
	Less than 49	°C		

Do the current condition(s) match the threshold?

YES : **REPLACE ECT SENSOR 2** , then **do the repair verification** .

NO : Go to step 7.

7. Problem verification:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Allow the sensors to cool to the ambient temperature.
   - 3. Note the ambient temperature.
   - 4. Turn the ignition switch to ON (II).
   - 5. Quickly note the value of ECT SENSOR 1 and ECT SENSOR 2 in the DATA LIST with the HDS.

Signal	Current conditions	
	Values	Unit
ECT SENSOR 1		
ECT SENSOR 2		

   - 6. Compare the value of ECT SENSOR 1 to the ambient temperature, and the value of ECT SENSOR 2 to the ambient temperature individually.

Does either sensor differ more than 5.4 °F (3 °C) from the ambient temperature?

YES : Replace the sensor that differed more than 5.4 °F (3 °C) from the ambient temperature, then **do the repair verification** .

NO : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at ECT sensor 1, ECT sensor 2, and the PCM.

GETtheMANUALS.org

REPAIR VERIFICATION

- 1. Turn the ignition switch to ON (II).
- 2. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 3. **DO THE PCM IDLE LEARN PROCEDURE** .
- 4. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P2183 ECT SENSOR 2 CIRCUIT RANGE/PERFORMANCE PROBLEM			

Is DTC P2183 indicated?

YES : Check for poor connections or loose terminals at ECT sensor 1, ECT sensor 2, and the PCM, then go to step 1.

NO : Troubleshooting is complete. If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

DTC P2184: ECT SENSOR 2 CIRCUIT LOW VOLTAGE

GETtheMANUALS.org

DTC Troubleshooting: P2184

Fig. 384: DTC Troubleshooting Flow Chart (P2184)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P2184 ECT SENSOR 2 CIRCUIT LOW VOLTAGE			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Check the parameter(s) below with the HDS.

GETtheMANUALS.org

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
ECT SENSOR 2	Less than 0.08	V		

Do the current condition(s) match the threshold?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at ECT sensor 2 and the PCM.

2. ECT sensor 2 check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     ECT Sensor 2 2P connector

   - 3. Turn the ignition switch to ON (II).
   - 4. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
ECT SENSOR 2	Less than 0.08	V		

Do the current condition(s) match the threshold?

YES : Go to step 3.

NO : **REPLACE ECT SENSOR 2** , then **do the repair verification** .

3. Shorted wire check (TW2 SENSOR line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connector.

     PCM connector A (49P)

   - 4. Check for continuity between test points 1 and 2.

Test point 1 ECT sensor 2 2P connector No. 2 (PNK)

Test point 2 Body ground

Fig. 385: Checking Continuity Between ECT Sensor 2 2P Connector No. 2 (PNK) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short in the TW2 SENSOR wire between the PCM (A44) and ECT sensor 2, then **do the repair verification** .

NO : The TW2 SENSOR wire is OK. **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM UPDATE** or **PCM REMOVAL AND INSTALLATION** , then **do the repair verification** .

REPAIR VERIFICATION

- 1. Turn the ignition switch to LOCK (0).
- 2. Reconnect all connectors.
- 3. Turn the ignition switch to ON (II).
- 4. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 5. **DO THE PCM IDLE LEARN PROCEDURE** .
- 6. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P2184 ECT SENSOR 2 CIRCUIT LOW VOLTAGE			

Is DTC P2184 indicated?

YES : Check for poor connections or loose terminals at ECT sensor 2 and the PCM. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then

GETtheMANUALS.org

recheck. If the PCM was substituted, go to step 1.

NO : Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

DTC P2185: ECT SENSOR 2 CIRCUIT HIGH VOLTAGE

GETtheMANUALS.org

DTC Troubleshooting: P2185

Fig. 386: DTC Troubleshooting Flow Chart (P2185)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P2185 ECT SENSOR 2 CIRCUIT HIGH VOLTAGE			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
ECT SENSOR 2	More than 4.92	V		

Do the current condition(s) match the threshold?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at ECT sensor 2 and the PCM.

2. Determine of possible failure area (ECT snesor 2, others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     ECT sensor 2 2P connector

   - 3. Connect terminals A and B with a jumper wire.

     Terminal A ECT sensor 2 2P connector No. 1 (GRY)

     Terminal B ECT sensor 2 2P connector No. 2 (PNK)

Fig. 387: Connecting Wire Between ECT Sensor 2 2P Connector No. 1 (GRY) And No. 2

GETtheMANUALS.org

(PNK)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 4. Turn the ignition switch to ON (II).
- 5. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
ECT SENSOR 2	More than 4.92	V		

Do the current condition(s) match the threshold?

YES : Go to step 3.

NO : **REPLACE ECT SENSOR 2** , then **do the repair verification** .

3. Determine possible failure area (TW2 SENSOR line, SG6 line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Remove the jumper wire.
   - 3. Turn the ignition switch to ON (II).
   - 4. Measure the voltage between test points 1 and 2.

   Test condition IG ON (II)

   ECT sensor 2 2P connector: disconnected

   Test circuit TW2 SENSOR

   Test point 1 ECT sensor 2 2P connector No. 2 (PNK)

   Test point 2 Body ground

Fig. 388: Measuring Voltage Between ECT Sensor 2 2P Connector No. 2 (PNK) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5.0 V?

GETtheMANUALS.org

YES : The TW2 SENSOR wire is OK. Go to step 4.

NO : Go to step 5.

4. Open wire check (SG6 line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connector.

     PCM connector A (49P)

   - 4. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     ECT sensor 2 2P connector: disconnected

     PCM connector A (49P): disconnected

     Test circuit SG6

     Test point 1 PCM connector A (49P) No. 10 (GRY)

     Test point 2 ECT sensor 2 2P connector No. 1 (GRY)

Fig. 389: Checking Continuity Between PCM Connector A (49P) No. 10 (GRY) And ECT Sensor 2 2P Connector No. 1 (GRY)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

GETtheMANUALS.org

YES : The SG6 wire is OK. **Update the PCM** See **PCM UPDATE** or **PCM REMOVAL AND INSTALLATION** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

NO : Repair an open in the SG6 wire between the PCM (A10) and ECT sensor 2, then **do the repair verification** .

5. Open wire check (TW2 SENSOR line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connector.

     PCM connector A (49P)

   - 4. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     ECT sensor 2 2P connector: disconnected

     PCM connector A (49P): disconnected

     Test circuit TW2 SENSOR

     Test point 1 PCM connector A (49P) No. 44 (PNK)

     Test point 2 ECT sensor 2 2P connector No. 2 (PNK)

Fig. 390: Checking Continuity Between PCM Connector A (49P) No. 44 (PNK) And ECT

GETtheMANUALS.org

Sensor 2 2P Connector No. 2 (PNK)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The TW2 SENSOR wire is OK. **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

NO : Repair an open in the TW2 SENSOR wire between the PCM (A44) and ECT sensor 2, then **do the repair verification** .

REPAIR VERIFICATION

- 1. Turn the ignition switch to LOCK (0).
- 2. Reconnect all connectors.
- 3. Turn the ignition switch to ON (II).
- 4. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 5. **DO THE PCM IDLE LEARN PROCEDURE** .
- 6. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P2185 ECT SENSOR 2 CIRCUIT HIGH VOLTAGE			

Is DTC P2185 indicated?

YES : Check for poor connections or loose terminals at ECT sensor 2 and the PCM. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then recheck. If the PCM was substituted, go to step 1.

NO : Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

DTC P2195: A/F SENSOR (SENSOR 1) SIGNAL STUCK LEAN

GETtheMANUALS.org

DTC Troubleshooting: P2195

Fig. 391: DTC Troubleshooting Flow Chart (P2195)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS or HOW TO TROUBLESHOOT THE A/T SYSTEM .**
- **If the vehicle was out of fuel and the engine stalled before this DTC was stored, refuel and clear the DTC with the HDS.**
- **If DTC P2101, P2118, P2135, P2138, P2176, or a combination of P2122 and P2127, P2122, and P2138, or P2127 and P2138 is stored at the same time, troubleshoot them first, then recheck for DTC P2195.**

GETtheMANUALS.org

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P2195 AIR FUEL RATIO (A/F) SENSOR (SENSOR 1) SIGNAL STUCK LEAN			

1. MAF sensor/IAT sensor visual check:
   - 1. **REMOVE THE MAF SENSOR/IAT SENSOR** .
   - 2. Check for dirt or debris in the MAF sensor/IAT sensor.

   Is it dirty?

   YES : Remove the debris. If needed, **REPLACE THE MAF SENSOR/IAT SENSOR** , then **do the repair verification** .

   NO : Go to step 2.

2. A/F sensor (Sensor 1) installation check:
   - 1. Check the installation of the A/F sensor (Sensor 1).

   Is the A/F sensor loose or installed incorrectly in the exhaust pipe?

   YES : Reinstall the A/F sensor (Sensor 1), then **do the repair verification** .

   NO : Go to step 3.

3. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 3. Start the engine, and let it idle without load (in P or N) until the radiator fan comes on.
   - 4. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P2195 AIR FUEL RATIO (A/F) SENSOR (SENSOR 1) SIGNAL STUCK LEAN			

   Is DTC P2195 indicated?

   YES : Check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the PCM. **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

   NO : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at

GETtheMANUALS.org

the A/F sensor (Sensor 1) and the PCM.

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Turn the ignition switch to ON (II).
- 2. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** or **HOW TO TROUBLESHOOT THE A/T SYSTEM** .
- 3. **DO THE PCM IDLE LEARN PROCEDURE** .
- 4. Start the engine, and let it idle without load (in P or N) until the radiator fan comes on.
- 5. Monitor the OBD STATUS for DTC P2195 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P2195 AIR FUEL RATIO (A/F) SENSOR (SENSOR 1) SIGNAL STUCK LEAN	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED : Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

FAILED : Go to step 1 and recheck. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then check the OBD STATUS again.

NOT COMPLETED : Keep the test condition until a result comes on.

DTC P219A: AIR-FUEL RATIO VARIATION OF CYLINDERS

GETtheMANUALS.org

DTC Troubleshooting: P219A

Fig. 392: DTC Troubleshooting Flow Chart (P219A)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board**

GETtheMANUALS.org

snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .

- **If any of the DTCs listed below are indicated at the same time as DTC P219A, troubleshoot those DTCs first, then recheck for P219A.**
  - **P0133, P1157, P1172, P2195, P2238, P2252, P2A00: A/F sensor (Sensor 1)**
  - **P0134, P0135: A/F sensor (Sensor 1) heater**
  - **P0201, P0202, P0203, P0204: No. 1 - No. 4 cylinder injector(s)**
  - **P0300: Random misfire**
  - **P0301, P0302, P0303, P0304: No. 1, No. 2, No. 3, or No. 4 cylinder misfire detected**
  - **P0351, P0352, P0353, P0354: Ignition coil power circuit**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P219A AIR-FUEL RATIO VARIATION OF CYLINDER			

1. Problem verification (CYLINDER A/F TEST with the HDS):
   - 1. Turn the ignition switch to ON (II).
   - 2. Record following HDS on-board snapshot parameters:
     - VEHICLE SPEED
     - ENGINE SPEED
     - MAP SENSOR
     - ECT SENSOR 1
     - APP SENSOR
     - AF FB (ST FUEL TRIM)
   - 3. Hold the engine speed at 3, 000 rpm without load (in P or N) until the radiator fan comes on, then let it idle.
   - 4. Check under these conditions:
     - A/C off
     - All electrical loads off
   - 5. Do the CYLINDER A/F TEST three times in the INSPECTION MENU with the HDS.

Is the result OK?

YES : Go to step 2.

NO : Go to step 3.

GETtheMANUALS.org

2. Problem verification (OBD STATUS check):
   - 6. Test-drive the vehicle in the range of these recorded on-board snapshot parameters:
     - VEHICLE SPEED
     - ENGINE SPEED
     - MAP SENSOR
     - ECT SENSOR 1
     - APP SENSOR
     - AF FB (ST FUEL TRIM)

Signal	Current conditions	
	Values	Unit
VEHICLE SPEED		
ENGINE SPEED		
MAP SENSOR		
ECT SENSOR 1		
APP SENSOR		
AF FB (ST FUEL TRIM)		

   - 2. Monitor the OBD STATUS for DTC P219A in the DTCs MENU with the HDS.

DTC Description	OBD Status
P219A AIR-FUEL RATIO VARIATION OF CYLINDER	

Does the HDS indicate FAILED?

YES : The failure is duplicated. Go to step 1.

NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time. If the HDS indicates EXECUTING, keep driving until a result comes on. If the HDS indicates OUT OF CONDITION, go to step **2-1** and recheck.

3. Engine compression check:
   - 1. DO A CYLINDER COMPRESSION TEST .

Is the compression of the problem cylinder lower than the other cylinders?

YES : Repair the engine compression problem, then **do the repair verification** .

NO : Go to step 4.

4. Valve clearance check:
   - 1. **Adjust the valve clearance** See VALVE CLEARANCE ADJUSTMENT or VALVE, SPRING, AND VALVE SEAL REMOVAL AND INSTALLATION .

GETtheMANUALS.org

- 2. Hold the engine speed at 3, 000 rpm without load (in P or N) until the radiator fan comes on, then let it idle.
- 3. Check under these conditions:
  - A/C off
  - All electrical loads off
- Do the CYLINDER A/F TEST three times in the INSPECTION MENU with the HDS.

Is the result OK?

YES : Failure is not duplicated. **do the repair verification** .

NO : Go to step 5.

5. Injector check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Exchange the injector from the problem cylinder with one from another cylinder.
   - 3. Hold the engine speed at 3, 000 rpm without load (in P or N) until the radiator fan comes on, then let it idle.
   - 4. Check under these conditions:
     - A/C off
     - All electrical loads off
   - Do the CYLINDER A/F TEST three times in the INSPECTION MENU with the HDS.

Is an injector failure indicated at the cylinder where the injector was exchanged?

YES : REPLACE THE FAULTY INJECTOR , then **do the repair verification** .

NO : Go to step 7.

6. Valve clearance check:
   - 1. **Inspect the valve clearance** See VALVE CLEARANCE ADJUSTMENT or VALVE, SPRING, AND VALVE SEAL REMOVAL AND INSTALLATION .

Is the valve clearance OK?

YES : Go to step 7.

NO : Adjust the valve clearance, then **do the repair verification** .

7. Intake and exhaust manifold visual check (oil leak):
   - 1. Check for carbon build-up in the intake manifold and the exhaust manifold.

Is there carbon build-up in the intake manifold and/or the cylinder head?

GETtheMANUALS.org

YES : Check the engine for oil leaks. If needed, repair the engine. Remove the carbon, then **do the repair verification** .

NO : Intermittent failure, the system is OK at this time. Check the engine for oil leaks.

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Turn the ignition switch to LOCK (0).
- 2. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** or **HOW TO TROUBLESHOOT THE A/T SYSTEM** .
- 3. **DO THE PCM IDLE LEARN PROCEDURE** .
- 4. Test-drive the vehicle in the range of these recorded on-board snapshot parameters:
  - VEHICLE SPEED
  - ENGINE SPEED
  - MAP SENSOR
  - ECT SENSOR 1
  - APP SENSOR
  - AF FB (ST FUEL TRIM)

Signal	Current conditions	
	Values	Unit
VEHICLE SPEED		
ENGINE SPEED		
MAP SENSOR		
ECT SENSOR 1		
APP SENSOR		
AF FB (ST FUEL TRIM)		

- 5. Monitor the OBD STATUS for DTC P219A in the DTCs MENU with the HDS.

DTC Description	OBD Status
P219A AIR-FUEL RATIO VARIATION OF CYLINDER	

Does the HDS indicate PASSED, FAILED, EXECUTING, or OUT OF CONDITION?

PASSED : Troubleshooting is complete. If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED : Go to step 1 and recheck.

EXECUTING : Keep the test condition until a result comes on.

OUT OF CONDITION : Meet the test condition, and check the OBD STATUS again.

GETtheMANUALS.org

DTC P2227: BARO SENSOR CIRCUIT RANGE/PERFORMANCE PROBLEM

Fig. 393: DTC Troubleshooting Flow Chart (P2227)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

GETtheMANUALS.org

- **If DTC P0107, P0108, P1128, and/or P1129 are stored at the same time as DTC P2227, troubleshoot those DTCs first, then recheck for DTC P2227.**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P2227 BARO SENSOR CIRCUIT RANGE/PERFORMANCE PROBLEM			

1. BARO Sensor performance check:
   - 1. Turn the ignition switch to ON (II), and wait 2 seconds.
   - 2. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
BARO SENSOR	About 101	kPa		

Is about 101 kPa (29.9 inHg, 760 mmHg), or about 2.9 V at sea level indicated?

YES : Go to step 2.

NO : **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

2. Problem verification:
   - 1. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** or **HOW TO TROUBLESHOOT THE A/T SYSTEM** .
   - 2. Start the engine. Hold the engine speed at 3, 000 rpm without load (in P or N) until the radiator fan comes on, then let it idle.
   - 3. Test-drive under these conditions:
     - Engine coolant temperature (ECT SENSOR 1) above 158 °F (70 °C)
     - Transmission in D
     - REL TP SENSOR between 16 and 28 degrees for 3 seconds

Signal	Current conditions	
	Values	Unit
ECT SENSOR 1		
REL TP SENSOR		

   - 4. Monitor the OBD STATUS for DTC P2227 with the HDS.

DTC Description	OBD Status

GETtheMANUALS.org

P2227 BARO SENSOR CIRCUIT RANGE/PERFORMANCE PROBLEM	

Does the HDS indicate FAILED?

YES : The failure is duplicated. Go to step 3.

NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time. If the HDS indicates NOT COMPLETED, go to step **2-2** and recheck.

3. Intake air system check:
   - 1. Check the intake air system for clogging or restrictions (foreign material, dirty air cleaner element, etc.).

Is the intake air system clogged or restricted?

YES : Remove the clog or restriction, then **do the repair verification** .

NO : **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Turn the ignition switch to ON (II).
- 2. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** or **HOW TO TROUBLESHOOT THE A/T SYSTEM** .
- 3. **DO THE PCM IDLE LEARN PROCEDURE** .
- 4. Start the engine. Hold the engine speed at 3, 000 rpm without load (in P or N) until the radiator fan comes on, then let it idle.
- 5. Test-drive under these conditions:
  - Engine coolant temperature (ECT SENSOR 1) above 158 °F (70 °C)
  - Transmission in D
  - REL TP SENSOR between 16 and 28 degrees for 3 seconds

Signal	Current conditions	
	Values	Unit
ECT SENSOR 1		
REL TP SENSOR		

- 6. Monitor the OBD STATUS for DTC P2227 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P2227 BARO SENSOR CIRCUIT RANGE/PERFORMANCE PROBLEM	

GETtheMANUALS.org

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED : Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM UPDATE** or **PCM REMOVAL AND INSTALLATION** . If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

FAILED : Go to step 1 and recheck. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then check the OBD STATUS again.

NOT COMPLETED : Meet the test condition, and check the OBD STATUS again.

DTC P2228: BARO SENSOR CIRCUIT LOW VOLTAGE

Fig. 394: DTC Troubleshooting Flow Chart (P2228)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P2228 BARO SENSOR CIRCUIT LOW VOLTAGE			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Check the parameter(s) below with the HDS.

	Threshold	Current conditions

GETtheMANUALS.org

Signal	Values	Unit	Values	Unit
BARO SENSOR	Less than 1.31	V		

Do the current condition(s) match the threshold?

YES : The failure is duplicated. **Update the PCM** See **PCM UPDATE** or **PCM REMOVAL AND INSTALLATION** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

NO : Intermittent failure, the system is OK at this time.

REPAIR VERIFICATION

- 1. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P2228 BARO SENSOR CIRCUIT LOW VOLTAGE			

Is DTC P2228 indicated?

YES : Check for poor connections or loose terminals at the PCM. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then recheck. If the PCM was substituted, go to step 1.

NO : Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM UPDATE** or **PCM REMOVAL AND INSTALLATION** . If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

DTC P2229: BARO SENSOR CIRCUIT HIGH VOLTAGE

GETtheMANUALS.org

Fig. 395: DTC Troubleshooting Flow Chart (P2229)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P2229 BARO SENSOR CIRCUIT HIGH VOLTAGE			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
BARO SENSOR	More than 4.49	V		

Do the current condition(s) match the threshold?

YES : The failure is duplicated. **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM UPDATE** or **PCM REMOVAL AND INSTALLATION** , then **do the repair verification** .

NO : Intermittent failure, the system is OK at this time.

REPAIR VERIFICATION

GETtheMANUALS.org

- 1. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P2229 BARO SENSOR CIRCUIT HIGH VOLTAGE			

Is DTC P2229 indicated?

YES : Check for poor connections or loose terminals at the PCM. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then recheck. If the PCM was substituted, go to step 1.

NO : Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

DTC P2238: A/F SENSOR (SENSOR 1) AFS+ CIRCUIT LOW VOLTAGE

GETtheMANUALS.org

DTC Troubleshooting: P2238

Fig. 396: DTC Troubleshooting Flow Chart (P2238)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P2238 AIR FUEL RATIO (A/F) SENSOR (SENSOR 1) AFS+ CIRCUIT LOW VOLTAGE			

GETtheMANUALS.org

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 3. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P2238 AIR FUEL RATIO (A/F) SENSOR (SENSOR 1) AFS+ CIRCUIT LOW VOLTAGE			

Is DTC P2238 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the A/F sensor (Sensor 1), the PGM-FI subrelay, and the PCM.

2. Shorted wire check (AFS+ line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connectors

     A/F sensor (Sensor 1) 4P connector

     PCM connector C (49P)

   - 4. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     A/F sensor (Sensor 1) 4P connector: disconnected

     PCM connector C (49P): disconnected

     Test circuit AFS+

     Test point 1 PCM connector C (49P) No. 39 (RED)

     Test point 2 Body ground

GETtheMANUALS.org

Fig. 397: Checking Continuity Between PCM Connector C (49P) No. 39 (RED) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short in the AFS+ wire between the PCM (C39) and the A/F sensor (Sensor 1), then **do the repair verification** .

NO : The AFS+ wire is OK. Go to step 3.

3. PCM internal circuit check:
   - 1. Reconnect PCM connector C (49P).
   - 2. Turn the ignition switch to ON (II).
   - 3. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     A/F sensor (Sensor 1) 4P connector: disconnected

     Test circuit AFS+

     Test point 1 A/F sensor (Sensor 1) 4P connector No. 2 (RED)

     Test point 2 Body ground

Fig. 398: Measuring Voltage Between A/F Sensor (Sensor 1) 4P Connector No. 2 (RED) And

GETtheMANUALS.org

Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is the voltage about 2.2 V?

YES : The PCM internal circuit is OK. **REPLACE THE A/F SENSOR (SENSOR 1)** , then **do the repair verification** .

NO : **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM UPDATE** or **PCM REMOVAL AND INSTALLATION** , then **do the repair verification** .

REPAIR VERIFICATION

- 1. Turn the ignition switch to LOCK (0).
- 2. Reconnect all connectors.
- 3. Turn the ignition switch to ON (II).
- 4. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 5. **DO THE PCM IDLE LEARN PROCEDURE** .
- 6. Monitor the OBD STATUS for DTC P2238 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P2238 AIR FUEL RATIO (A/F) SENSOR (SENSOR 1) AFS+ CIRCUIT LOW VOLTAGE	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED : Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM UPDATE** or **PCM REMOVAL AND INSTALLATION** . If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED : Go to step 1 and recheck. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then check the OBD STATUS again.

NOT COMPLETED : Keep idling until a result comes on.

DTC P2252: A/F SENSOR (SENSOR 1) AFS- CIRCUIT LOW VOLTAGE

GETtheMANUALS.org

DTC Troubleshooting: P2252

Fig. 399: DTC Troubleshooting Flow Chart (P2252)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P2252 A/F SENSOR (SENSOR 1) AFS-CIRCUIT LOW VOLTAGE			

GETtheMANUALS.org

1. Problem verification:
    - 1. Turn the ignition switch to ON (II).
    - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
    - 3. Start the engine. Hold the engine speed at 3, 000 rpm without load (in P or N) until the radiator fan comes on, then let it idle.
    - 4. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P2252 A/F SENSOR (SENSOR 1) AFS-CIRCUIT LOW VOLTAGE			

Is DTC P2252 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the A/F sensor (Sensor 1), the PGM-FI subrelay, and the PCM.

2. Shorted wire check (AFS- line):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Jump the SCS line with the HDS.
    - 3. Disconnect the following connectors.

      A/F sensor (Sensor 1) 4P connector

      PCM connector C (49P)

    - 4. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      A/F sensor (Sensor 1) 4P connector: disconnected

      PCM connector C (49P): disconnected

      Test circuit AFS-

      Test point 1 PCM connector C (49P) No. 40 (YEL)

      Test point 2 Body ground

GETtheMANUALS.org

Fig. 400: Checking Continuity Between PCM Connector C (49P) No. 40 (YEL) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short in the AFS- wire between the PCM (C40) and the A/F sensor (Sensor 1), then **do the repair verification** .

NO : The AFS- wire is OK. Go to step 3.

3. A/F sensor (Sensor 1) check (substitution):
   - 1. **SUBSTITUTE A KNOWN-GOOD A/F SENSOR (SENSOR 1)** .
   - 2. Reconnect all connectors.
   - 3. Turn the ignition switch to ON (II).
   - 4. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 5. **DO THE PCM IDLE LEARN PROCEDURE** .
   - 6. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P2252 A/F SENSOR (SENSOR 1) AFS-CIRCUIT LOW VOLTAGE			

Is DTC P2252 indicated?

YES : The A/F sensor (Sensor 1) is OK. **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM UPDATE** or **PCM REMOVAL AND INSTALLATION** , then **do the repair verification** .

NO : **REPLACE THE ORIGINAL A/F SENSOR (SENSOR 1)** , then **do the repair verification** .

REPAIR VERIFICATION (OBD STATUS CHECK)

GETtheMANUALS.org

- 1. Turn the ignition switch to LOCK (0).
- 2. Reconnect all connectors.
- 3. Turn the ignition switch to ON (II).
- 4. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** or **HOW TO TROUBLESHOOT THE A/T SYSTEM** .
- 5. **DO THE PCM IDLE LEARN PROCEDURE** .
- 6. Monitor the OBD STATUS for DTC P2252 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P2252 A/F SENSOR (SENSOR 1) AFS-CIRCUIT LOW VOLTAGE	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED : Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

FAILED : Go to step 1 and recheck. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then check the OBD STATUS again.

NOT COMPLETED : Keep idling until a result comes on.

DTC P2270: SECONDARY HO2S (SENSOR 2) CIRCUIT SIGNAL STUCK LEAN

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P2270 SECONDARY HO2S (SENSOR 2) CIRCUIT SIGNAL STUCK LEAN			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 3. Start the engine. Hold the engine speed at 3, 000 rpm without load (in P or N) until the radiator fan comes on, then let it idle.
   - 4. Test-drive under these conditions:
     - Engine coolant temperature (ECT SENSOR 1) above 158 °F (70 °C)

GETtheMANUALS.org

- Transmission in D
- Engine speed between 1, 500-3, 000 rpm
- Drive 30 seconds or more

Signal	Current conditions	
	Values	Unit
ECT SENSOR 1		
ENGINE SPEED		

- 5. Monitor the OBD STATUS for DTC P2270 with the HDS.

DTC Description	OBD Status
P2270 SECONDARY HO2S (SENSOR 2) CIRCUIT SIGNAL STUCK LEAN	

Does the HDS indicate FAILED?

YES : **REPLACE THE SECONDARY HO2S (SENSOR 2)** , then **do the repair verification** .

NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at secondary HO2S (Sensor 2) and the PCM. If the HDS indicates NOT COMPLETED, go to step **1-3** and recheck.

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Turn the ignition switch to ON (II).
- 2. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** or **HOW TO TROUBLESHOOT THE A/T SYSTEM** .
- 3. **DO THE PCM IDLE LEARN PROCEDURE** .
- 4. Start the engine. Hold the engine speed at 3, 000 rpm without load (in P or N) until the radiator fan comes on, then let it idle.
- 5. Test-drive under these conditions:
  - Engine coolant temperature (ECT SENSOR 1) above 158 °F (70 °C)
  - Transmission in D
  - Engine speed between 1, 500-3, 000 rpm
  - Drive 30 seconds or more

Signal	Current conditions	
	Values	Unit
ECT SENSOR 1		
ENGINE SPEED		

- 6. Monitor the OBD STATUS for DTC P2270 in the DTCs MENU with the HDS.

GETtheMANUALS.org

DTC Description	OBD Status
P2270 SECONDARY HO2S (SENSOR 2) CIRCUIT SIGNAL STUCK LEAN	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED : Troubleshooting is complete. If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED : Go to step 1 and recheck.

NOT COMPLETED : Meet the test condition, and check the OBD STATUS again.

DTC P2279: INTAKE AIR SYSTEM LEAK

GETtheMANUALS.org

Fig. 401: DTC Troubleshooting Flow Chart (P2279)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**
- **If DTC P0443 is stored at the same time as DTC P2279, troubleshoot DTC P0443 first, then recheck for DTC P2279.**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P2279 INTAKE AIR SYSTEM LEAK			

1. Intake air system visual check:
   - 1. Check for vacuum leaks at these parts:
     - PCV valve
     - PCV hose
     - Purge (PCS) line
     - Throttle body
     - Intake manifold
     - Brake booster
     - Brake booster hose

   Are the parts OK?

   YES : Go to step 2.

   NO : Repair or replace any leaking part(s), then **do the repair verification** .

2. Problem verification:
   - 1. Let the engine cool until the value of ECT SENSOR 1 is 140 °F (60 °C) or less.

Signal	Current conditions	
	Values	Unit
ECT SENSOR 1		

   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 3. Start the engine, and let it idle for 10 seconds or more.
   - 4. Monitor the OBD STATUS for DTC P2279 with the HDS.

DTC Description	OBD Status

GETtheMANUALS.org

P2279 INTAKE AIR SYSTEM LEAK	

Does the HDS indicate FAILED?

YES : The failure is duplicated. Check the camshaft timing and adjust it if needed, then **do the repair verification** .

NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time. Check for vacuum leaks at the PCV valve, the PCV hose, the purge (PCS) line, the throttle body, the intake manifold, the brake booster, and the brake booster hose. If the HDS indicates EXECUTING, keep idling until a result comes on. If the HDS indicates OUT OF CONDITION, go to step **2-1** . and recheck.

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Turn the ignition switch to LOCK (0).
- 2. Reconnect all connectors.
- 3. Turn the ignition switch to ON (II).
- 4. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 5. **DO THE PCM IDLE LEARN PROCEDURE** .
- 6. Let the engine cool until the value of ECT SENSOR 1 is 140 °F (60 °C) or less.

Signal	Current conditions	
	Values	Unit
ECT SENSOR 1		

- 7. Start the engine, and let it idle for 10 seconds or more.
- 8. Monitor the OBD STATUS for DTC P2279 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P2279 INTAKE AIR SYSTEM LEAK	

Does the HDS indicate PASSED, FAILED, EXECUTING, or OUT OF CONDITION?

PASSED : Troubleshooting is complete. If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED : Go to step 1 and recheck.

EXECUTING : Keep the test condition until a result comes on.

OUT OF CONDITION Meet the test condition, and check the OBD STATUS again.

DTC P2422: EVAP CANISTER VENT SHUT VALVE STUCK CLOSED

GETtheMANUALS.org

MALFUNCTION

GETtheMANUALS.org

DTC Troubleshooting: P2422

Fig. 402: DTC Troubleshooting Flow Chart (P2422)

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS or HOW TO TROUBLESHOOT THE A/T SYSTEM .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P2422 EVAP CVS STUCK CLOSED MALFUNCTION			

1. EVAP system check:
   - 1. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 3. Turn the ignition switch to LOCK (0).
   - 4. Remove the fuel fill cap, and wait 1 minute.
   - 5. Turn the ignition switch to ON (II).
   - 6. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
FTP SENSOR	-0.67-0.67	kPa		
	2.4-2.6	V		

Do the current condition(s) match the threshold?

YES : Go to step 2.

NO : Go to step 4.

2. Problem verification:
   - 1. Install the fuel fill cap.
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 3. Start the engine, and let it idle without load (in P or N) until the radiator fan comes on.
   - 4. Monitor the EVAP PC DUTY (purge control duty) in the DATA LIST with the HDS, while holding the engine speed at 3, 000 rpm with the EVAP PC DUTY at 20 % or more for at least 4 minutes, then let the engine idle.

Signal	Current conditions	
	Values	Unit
EVAP PC DUTY		

GETtheMANUALS.org

- 5. Monitor the OBD STATUS for DTC P2422 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P2422 EVAP CVS STUCK CLOSED MALFUNCTION	

Does the HDS indicate FAILED?

YES : The failure is duplicated. Go to step 3.

NO : If the HDS indicates PASSED, there might be an intermittent failure, and the system is OK at this time. Check the on-board snapshot, and repeat the driving conditions when the DTC set (fuel level, engine speed, vehicle speed, and outside temperature). If no problem is found, check for poor connections or loose terminals between the FTP sensor and the PCM. Also check for a blockage in the FTP sensor vent port and vent hose, and the EVAP canister vent hose and drain joint. If the HDS indicates NOT COMPLETED, let the engine idle until a result comes on.

3. EVAP canister vent shut valve operation check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. **REMOVE THE EVAP CANISTER VENT SHUT VALVE FROM THE EVAP CANISTER** .
   - 3. Connect the 2P connector to the EVAP canister vent shut valve.
   - 4. Turn the ignition switch to ON (II).
   - 5. Select EVAP TEST in the INSPECTION MENU, and do the EVAP CVS ON in the SINGLE SOLENOID with the HDS.
   - 6. Check the EVAP canister vent shut valve (A) operation.

Fig. 403: Identifying EVAP Canister Vent Shut Valve
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is the valve free of corrosion, and does it operate properly?

YES : Check for a blockage in the EVAP canister, the vent hoses, and the drain joint, and repair it if needed. Install the EVAP canister vent shut valve, then **do the repair verification** .

GETtheMANUALS.org

NO : **REPLACE THE EVAP CANISTER VENT SHUT VALVE** , then **do the repair verification** .

4. FTP sensor vent hose restriction check:
   - 1. Disconnect the vent hose (A) from the FTP sensor (B).

Fig. 404: Identifying Vent Hose And FTP Sensor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

   - 2. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
FTP SENSOR	-0.67-0.67	kPa		
	2.4-2.6	V		

Do the current condition(s) match the threshold?

YES : Check for a blockage in the FTP sensor vent hose, then **do the repair verification** .

NO : The FTP sensor vent hose is OK. Go to step 5.

5. FTP sensor port restriction check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Remove the FTP sensor (A) from the EVAP canister with its connector connected.

GETtheMANUALS.org

Fig. 405: Identifying FTP Sensor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 3. Turn the ignition switch to ON (II).
- 4. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
FTP SENSOR	-0.67-0.67	kPa		
	2.4-2.6	V		

Do the current condition(s) match the threshold?

YES : The FTP sensor port is OK. The EVAP canister has an internal blockage; **REPLACE THE EVAP CANISTER** , then **do the repair verification** .

NO : REPLACE THE FTP SENSOR , then **do the repair verification** .

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Turn the ignition switch to LOCK (0).
- 2. Install the parts in the reverse order of removal.
- 3. Turn the ignition switch to ON (II).
- 4. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 5. **DO THE PCM IDLE LEARN PROCEDURE** .
- 6. Monitor the EVAP PC DUTY (purge control duty) in the DATA LIST with the HDS, while holding the engine speed at 3, 000 rpm with the EVAP PC DUTY at 20 % or more for at least 4 minutes, then let

GETtheMANUALS.org

the engine idle.

Signal	Current conditions	
	Values	Unit
EVAP PC DUTY		

- 7. Monitor the OBD STATUS for DTC P2422 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P2422 EVAP CVS STUCK CLOSED MALFUNCTION	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED : Troubleshooting is complete. If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED : Go to step 1 and recheck.

NOT COMPLETED : Hold the engine speed at 3, 000 rpm with the EVAP PC DUTY at 20% or more until a result comes on.

DTC P2610: PCM IGNITION OFF INTERNAL TIMER MALFUNCTION

Fig. 406: DTC Troubleshooting Flow Chart (P2610)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and

GETtheMANUALS.org

review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P2610 PCM IGNITION OFF INTERNAL TIMER MALFUNCTION			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 3. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P2610 PCM IGNITION OFF INTERNAL TIMER MALFUNCTION			

Is DTC P2610 indicated?

YES : The failure is duplicated. **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

NO : Intermittent failure, the system is OK at this time. If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

REPAIR VERIFICATION

- 1. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P2610 PCM IGNITION OFF INTERNAL TIMER MALFUNCTION			

Is DTC P2610 indicated?

YES : If the PCM was updated, **substitute a known-good PCM** See **PCM UPDATE** or **PCM REMOVAL AND INSTALLATION** , then recheck. If the PCM was substituted, go to step 1.

NO : Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . If any other Pending or Confirmed DTCs are

GETtheMANUALS.org

indicated, go to the indicated DTC's troubleshooting.

DTC P2646: ROCKER ARM OIL PRESSURE SWITCH CIRCUIT LOW VOLTAGE

GETtheMANUALS.org

DTC Troubleshooting: P2646

Fig. 407: DTC Troubleshooting Flow Chart (P2646)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

Special Tools Required

- **Pressure Gauge Adapter 07NAJ-P07010A**
- **A/T Low Pressure Gauge w/Panel 07406-0070301**
- **A/T Pressure Test Hose 07AAJ-PY4A100**
- **A/T Pressure Adapter 07MAJ-PY40120**
- **Oil Pressure Hose 07ZAJ-S5AA200**

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**
- **If DTC P2648 and/or P2649 are stored at the same time as DTC P2646, troubleshoot those DTCs first, then recheck for DTC P2646.**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P2646 ROCKER ARM OIL PRESSURE SWITCH CIRCUIT LOW VOLTAGE			

1. Oil level check:
   - 1. CHECK THE ENGINE OIL LEVEL .

   Is the level OK?

   YES : Go to step 2.

   NO : ADJUST THE ENGINE OIL TO THE PROPER LEVEL , then **do the repair verification** .

2. Problem verification:
   - 1. Do the VTEC TEST in the INSPECTION MENU with the HDS.

   Is the result OK?

   YES : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the rocker arm oil pressure switch, the rocker arm oil control solenoid, and the PCM.

   NO : The failure is duplicated. Go to step 3.

3. Determine possible failure area (VT SW line, others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Rocker arm oil pressure switch 2P connector

GETtheMANUALS.org

- 3. Turn the ignition switch to ON (II).
- 4. Check the parameter(s) below with the HDS.

Signal	Malfunction threshold		Current conditions	
	Values	Unit	Values	Unit
VTEC PRES SW	ON			

Do the current condition(s) match the threshold?

YES : Go to step 5.

NO : Go to step 4.

4. VTEC system oil pressure check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Remove the rocker arm oil pressure switch (A) from the rocker arm oil control valve, and attach the special tools as shown, then attach the rocker arm oil pressure switch to the oil pressure gauge adapter (B).

Fig. 408: Checking VTEC System Oil Pressure Using Tools
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 3. Reconnect the rocker arm oil pressure switch 2P connector.

GETtheMANUALS.org

- 4. Start the engine.
- 5. Do the VTEC TEST in the INSPECTION MENU with the HDS.
- 6. Check the oil pressure.

Does the oil pressure increase to at least 392 kPa (4.0 kgf/cm^2 , 56.9 psi)?

YES : The VTEC system oil pressure is OK. REPLACE THE ROCKER ARM OIL PRESSURE SWITCH , then **do the repair verification** .

NO : Inspect the VTEC system. If it is OK, REPLACE THE ROCKER ARM OIL CONTROL VALVE , then **do the repair verification** .

5. Shorted wire check (VT SW line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connector.

     PCM connector C (49P)

   - 4. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     PCM connector C (49P): disconnected

     Test circuit VT SW

     Test point 1 PCM connector C (49P) No. 13 (LT BLU)

     Test point 2 Body ground

Fig. 409: Checking Continuity Between PCM Connector C (49P) No. 13 (LT BLU) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

Is there continuity?

YES : Repair a short in the VT SW wire between the PCM (C13) and the rocker arm oil pressure switch, then **do the repair verification** .

NO : The VT SW wire is OK. **Update the PCM** See **PCM UPDATE** or **PCM REMOVAL AND INSTALLATION** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

REPAIR VERIFICATION

- 1. Reconnect all connectors.
- 2. Turn the ignition switch to ON (II).
- 3. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 4. **DO THE PCM IDLE LEARN PROCEDURE** .
- 5. Do the VTEC TEST in the INSPECTION MENU with the HDS.
- 6. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P2646 ROCKER ARM OIL PRESSURE SWITCH CIRCUIT LOW VOLTAGE			

Is DTC P2646 indicated?

YES : Check for poor connections or loose terminals at the rocker arm oil pressure switch, the rocker arm oil control solenoid, and the PCM. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then recheck. If the PCM was substituted, go to step 1.

NO : Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

DTC P2647: ROCKER ARM OIL PRESSURE SWITCH CIRCUIT HIGH VOLTAGE

GETtheMANUALS.org

DTC Troubleshooting: P2647

Fig. 410: DTC Troubleshooting Flow Chart (P2647)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**
- **If DTC P2648 and/or P2649 are stored at the same time as DTC P2647, troubleshoot those DTCs first, then recheck for DTC P2647.**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P2647 ROCKER ARM OIL PRESSURE SWITCH CIRCUIT HIGH VOLTAGE			

1. Oil level check:
   - 1. CHECK THE ENGINE OIL LEVEL .

   Is the level OK?

   YES : Go to step 2.

   NO : ADJUST THE ENGINE OIL TO THE PROPER LEVEL , then **do the repair verification** .

2. Problem verification:
   - 1. Do the VTEC TEST in the INSPECTION MENU with the HDS.

   NOTE: **If DTC P2647 is indicated, go to step 6. If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.**

   Is the result OK?

   YES : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the rocker arm oil pressure switch, the rocker arm oil control solenoid, and the PCM.

   NO : The failure is duplicated. Go to step 3.

3. Determine possible failure area (rocker arm oil control solenoid, others):
   - 1. Check the result of VTEC TEST.

   Is VTEC Switch Failure, VTEC Switch Open, VTEC Switch SIG Line Open, or VTEC Switch GND Line Open indicated?

   YES : Go to step 4.

   NO : Check for poor connections or loose terminals at the rocker arm oil pressure switch. If it is OK, REPLACE THE ROCKER ARM OIL CONTROL VALVE , then **do the repair verification** .

GETtheMANUALS.org

4. Rocker arm oil pressure switch internal resistance check:
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Disconnect the following connector.

      Rocker arm oil pressure switch 2P connector

    - 3. At the rocker arm oil pressure switch side, measure the resistance between test points 1 and 2.

      Test condition IG LOCK (0)

      Rocker arm oil pressure switch 2P connector: disconnected

      Test circuit VT SW, LG

      Test point 1 Rocker arm oil pressure switch 2P connector No. 1 (rocker arm oil pressure switch side)

      Test point 2 Rocker arm oil pressure switch 2P connector No. 2 (rocker arm oil pressure switch side)

   Is there continuity?

   YES : Go to step 5.

   NO : REPLACE THE ROCKER ARM OIL PRESSURE SWITCH , then **do the repair verification** .

5. Open wire check (LG2 line):
    - 1. Turn the ignition switch to ON (II).
    - 2. Measure the voltage between test points 1 and 2.

      Test condition IG ON (II)

      Rocker arm oil pressure switch 2P connector: disconnected

      Test circuit VT SW

      Test point 1 Rocker arm oil pressure switch 2P connector No. 1 (LT BLU)

      Test point 2 Body ground

   Is there about 5.0 V?

   YES : The VT SW wire is OK. Repair an open in the LG2 wire between the rocker arm oil pressure switch and G101, then **do the repair verification** .

   NO : Go to step 6.

GETtheMANUALS.org

6. Open wire check (VT SW line):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Jump the SCS line with the HDS.
    - 3. Disconnect the following connector.

      PCM connector C (49P)

    - 4. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      Rocker arm oil pressure switch 2P connector: disconnected

      PCM connector C (49P): disconnected

      Test circuit VT SW

      Test point 1 PCM connector C (49P) No. 13 (LT BLU)

      Test point 2 Rocker arm oil pressure switch 2P connector No. 1 (LT BLU)

Fig. 411: Checking Continuity Between PCM Connector C (49P) No. 13 (LT BLU) And Rocker Arm Oil Control Solenoid 2P Connector No. 1 (LT BLU)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The VT SW wire is OK. **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM**

GETtheMANUALS.org

REMOVAL AND INSTALLATION or **PCM UPDATE** , then **do the repair verification** .

NO : Repair an open in the VT SW wire between the rocker arm oil pressure switch and the PCM (C13), then **do the repair verification** .

REPAIR VERIFICATION

- 1. Reconnect all connectors.
- 2. Turn the ignition switch to ON (II).
- 3. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** or **HOW TO TROUBLESHOOT THE A/T SYSTEM** .
- 4. **DO THE PCM IDLE LEARN PROCEDURE** .
- 5. Start the engine, and let it idle.
- 6. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P2647 ROCKER ARM OIL PRESSURE SWITCH CIRCUIT HIGH VOLTAGE			

Is DTC P2647 indicated?

YES : Check for poor connections or loose terminals at the rocker arm oil pressure switch, the rocker arm oil control solenoid, and the PCM. If the PCM was updated, **substitute a known-good PCM** See **PCM UPDATE** or **PCM REMOVAL AND INSTALLATION** , then recheck. If the PCM was substituted, go to step 1.

NO : Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

DTC P2648: ROCKER ARM OIL CONTROL SOLENOID CIRCUIT LOW VOLTAGE

GETtheMANUALS.org

DTC Troubleshooting: P2648

Fig. 412: DTC Troubleshooting Flow Chart (P2648)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS or HOW TO TROUBLESHOOT THE A/T SYSTEM .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P2648 ROCKER ARM OIL CONTROL SOLENOID CIRCUIT LOW VOLTAGE			

1. Problem verification:

GETtheMANUALS.org

- 1. Turn the ignition switch to ON (II).
- 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** or **HOW TO TROUBLESHOOT THE A/T SYSTEM** .
- 3. Do the VTEC TEST in the INSPECTION MENU with the HDS.

Is the result OK?

YES : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the rocker arm oil pressure switch, the rocker arm oil control solenoid, and the PCM.

NO : The failure is duplicated. Go to step 2.

2. Rocker arm oil control solenoid internal resistance check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Rocker arm oil control solenoid 2P connector

   - 3. At the rocker arm oil control solenoid side, measure the resistance between test points 1 and 2.

     Test condition IG LOCK (0)

     Rocker arm oil control solenoid 2P connector: disconnected

     Test circuit VT SOL, PG1

     Test point 1 Rocker arm oil control solenoid 2P connector No. 1 (rocker arm oil control solenoid side)

     Test point 2 Rocker arm oil control solenoid 2P connector No. 2 (rocker arm oil control solenoid side)

Fig. 413: Measuring Resistance Between Rocker Arm Oil Control Solenoid 2P Connector No. 1 And No. 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there 14-30 ohms at room temperature?

GETtheMANUALS.org

YES : Go to step 3.

NO : REPLACE THE ROCKER ARM OIL CONTROL VALVE , then **do the repair verification** .

3. Shorted wire check (VT SOL line):
   - 1. Jump the SCS line with the HDS.
   - 2. Disconnect the following connector.

     PCM connector B (49P)

   - 3. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Rocker arm oil control solenoid 2P connector: disconnected

     PCM connector B (49P): disconnected

     Test circuit VT SOL

     Test point 1 PCM connector B (49P) No. 33 (GRN)

     Test point 2 Body ground

Fig. 414: Checking Continuity Between PCM Connector B (49P) No. 33 (GRN) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short in the VT SOL wire between the rocker arm oil control solenoid and the PCM (B33), then **do the repair verification** .

NO : The VT SOL wire is OK. **Update the PCM** See **PCM UPDATE** or **PCM REMOVAL AND INSTALLATION** if it does not have the latest software, or **substitute a known-good PCM** See **PCM UPDATE** or **PCM REMOVAL AND INSTALLATION** , then **do the repair verification** .

GETtheMANUALS.org

REPAIR VERIFICATION

- 1. Reconnect all connectors.
- 2. Turn the ignition switch to ON (II).
- 3. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** or **HOW TO TROUBLESHOOT THE A/T SYSTEM** .
- 4. **DO THE PCM IDLE LEARN PROCEDURE** .
- 5. Do the VTEC TEST in the INSPECTION MENU with the HDS.
- 6. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P2648 ROCKER ARM OIL CONTROL SOLENOID CIRCUIT LOW VOLTAGE			

Is DTC P2648 indicated?

YES : Check for poor connections or loose terminals at the rocker arm oil pressure switch, the rocker arm oil control solenoid, and the PCM. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then recheck. If the PCM was substituted, go to step 1.

NO : Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM UPDATE** or **PCM REMOVAL AND INSTALLATION** . If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

DTC P2649: ROCKER ARM OIL CONTROL SOLENOID CIRCUIT HIGH VOLTAGE

GETtheMANUALS.org

DTC Troubleshooting: P2649

Fig. 415: DTC Troubleshooting Flow Chart (P2649)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P2649 ROCKER ARM OIL CONTROL SOLENOID CIRCUIT HIGH VOLTAGE			

GETtheMANUALS.org

1. Problem verification:
    - 1. Turn the ignition switch to ON (II).
    - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
    - 3. Start the engine. Hold the engine speed at 3, 000 rpm without load (in P or N) until the radiator fan comes on, then let it idle.
    - 4. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P2649 ROCKER ARM OIL CONTROL SOLENOID CIRCUIT HIGH VOLTAGE			

Is DTC P2649 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the rocker arm oil pressure switch, the rocker arm oil control solenoid, and the PCM.

2. Rocker arm oil control solenoid internal resistance check:
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Disconnect the following connector.

      Rocker arm oil control solenoid 2P connector

    - 3. At the rocker arm oil control solenoid side, measure the resistance between test points 1 and 2.

      Test condition IG LOCK (0)

      Rocker arm oil control solenoid 2P connector: disconnected

      Test circuit VT SOL, PG1

      Test point 1 Rocker arm oil control solenoid 2P connector No. 1 (rocker arm oil control solenoid side)

      Test point 2 Rocker arm oil control solenoid 2P connector No. 2 (rocker arm oil control solenoid side)

GETtheMANUALS.org

Fig. 416: Measuring Resistance Between Rocker Arm Oil Control Solenoid 2P Connector No. 1 And No. 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there 14-30 ohms at room temperature?

YES : Go to step 3.

NO : REPLACE THE ROCKER ARM OIL CONTROL VALVE , then **do the repair verification** .

3. Open wire check (PG1 line):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Rocker arm oil control solenoid 2P connector: disconnected

     Test circuit PG1

     Test point 1 Rocker arm oil control solenoid 2P connector No. 2 (BLK)

     Test point 2 Body ground

Fig. 417: Checking Continuity Between Rocker Arm Oil Control Solenoid 2P Connector No. 2 (BLK) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

GETtheMANUALS.org

YES : Go to step 4.

NO : Repair an open in the PG1 wire between the rocker arm oil control solenoid and the G101, then **do the repair verification** .

4. Shorted wire check (VT SOL line):
   - 1. Jump the SCS line with the HDS.
   - 2. Disconnect the following connector.

     PCM connector B (49P)

   - 3. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Rocker arm oil control solenoid 2P connector: disconnected

     PCM connector B (49P): disconnected

     Test circuit VT SOL

     Test point 1 PCM connector B (49P) No. 33 (GRN)

     Test point 2 Rocker arm oil control solenoid 2P connector No. 1 (GRN)

Fig. 418: Checking Continuity Between PCM Connector B (49P) No. 33 (GRN) And Rocker Arm Oil Control Solenoid 2P Connector No. 1 (GRN)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

GETtheMANUALS.org

YES : The VT SOL wire is OK. **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM UPDATE** or **PCM REMOVAL AND INSTALLATION** , then **do the repair verification** .

NO : Repair an open in the VT SOL wire between the rocker arm oil control solenoid and the PCM (B33), then **do the repair verification** .

REPAIR VERIFICATION

- 1. Reconnect all connectors.
- 2. Turn the ignition switch to ON (II).
- 3. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 4. **DO THE PCM IDLE LEARN PROCEDURE** .
- 5. Start the engine. Hold the engine speed at 3, 000 rpm without load (in P or N) until the radiator fan comes on, then let it idle
- 6. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P2649 ROCKER ARM OIL CONTROL SOLENOID CIRCUIT HIGH VOLTAGE			

Is DTC P2649 indicated?

YES : Check for poor connections or loose terminals at the rocker arm oil pressure switch, the rocker arm oil control solenoid, and the PCM. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then recheck. If the PCM was substituted, go to step 1.

NO : Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM UPDATE** or **PCM REMOVAL AND INSTALLATION** . If any other Pending or Confirmed DTCs are indicated, go to the indicated DTC's troubleshooting.

DTC P2A00: A/F SENSOR (SENSOR 1) CIRCUIT RANGE/PERFORMANCE PROBLEM

GETtheMANUALS.org

DTC Troubleshooting: P2A00

Fig. 419: DTC Troubleshooting Flow Chart (P2A00)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P2A00 A/F SENSOR (SENSOR 1) CIRCUIT RANGE/PERFORMANCE PROBLEM			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. **Clear the DTC with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 3. Start the engine. Hold the engine speed at 3, 000 rpm without load (in P or N) until the radiator fan comes on, then let it idle.
   - 4. Test-drive under these conditions:

GETtheMANUALS.org

- Engine coolant temperature (ECT SENSOR 1) above 158 °F (70 °C)
- Transmission in D
- Vehicle speed between 25-55 mph (40-90 km/h) for 5 minutes
- Drive at a steady speed between 55-75 mph (88- 120 km/h) for 10 seconds, then decelerate (with throttle fully closed) for at least 4 seconds

Signal	Current conditions	
	Values	Unit
ECT SENSOR 1		
ENGINE SPEED		

- 5. Monitor the OBD STATUS for DTC P2A00 with the HDS.

DTC Description	OBD Status
P2A00 A/F SENSOR (SENSOR 1) CIRCUIT RANGE/PERFORMANCE PROBLEM	

Does the HDS indicate FAILED?

YES : **REPLACE THE A/F SENSOR (SENSOR 1)** , then **do the repair verification** .

NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the PCM. If the HDS indicates EXECUTING, keep driving until a result comes on. If the HDS indicates OUT OF CONDITION, go to step **1-3** and recheck.

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Turn the ignition switch to ON (II).
- 2. **Reset the PCM with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
- 3. **DO THE PCM IDLE LEARN PROCEDURE** .
- 4. Test-drive under these conditions:
  - Engine coolant temperature (ECT SENSOR 1) above 158 °F (70 °C)
  - Transmission in D
  - Vehicle speed between 25-55 mph (40-90 km/h) for 5 minutes
  - Drive at a steady speed between 55-75 mph (88- 120 km/h) for 10 seconds, then decelerate (with throttle fully closed) for at least 4 seconds

Signal	Current conditions	
	Values	Unit
ECT SENSOR 1		

GETtheMANUALS.org

ENGINE SPEED		

- 5. Monitor the OBD STATUS for DTC P2A00 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P2A00 A/F SENSOR (SENSOR 1) CIRCUIT RANGE/PERFORMANCE PROBLEM	

Does the HDS indicate PASSED, FAILED, EXECUTING, or OUT OF CONDITION?

PASSED : Troubleshooting is complete. If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED : Go to step 1 and recheck.

EXECUTING : Keep driving until a result comes on.

OUT OF CONDITION : Meet the test condition, and check the OBD STATUS again.

GETtheMANUALS.org

MOONROOF SYMPTOM TROUBLESHOOTING INDEX

MOONROOF ELECTRICAL SYMPTOM TROUBLESHOOTING INDEX

Symptom	Diagnostic procedure
Water leaks from moonroof	1. Check for a defective or an improperly installed glass weatherstrip or drain channel. 2. Check for a gap between the drain channel seal and the roof panel. 3. **Check the glass position adjustment** See **MOONROOF GLASS POSITION ADJUSTMENT** or **MOONROOF GLASS REMOVAL AND INSTALLATION**. 4. Check for a clogged or detached drain tube.
Wind noise from moonroof	1. Check for excessive clearance between the glass weatherstrip and the roof panel. 2. **Check the glass position adjustment** See **MOONROOF GLASS POSITION ADJUSTMENT** or **MOONROOF GLASS REMOVAL AND INSTALLATION**.
Motor noise from moonroof	1. Check for a loose motor. 2. Check for a worn gear or bearing. 3. Check for a deformed cable assembly. 4. Check for dirt or debris.
Moonroof glass does not move smoothly	1. **CHECK FOR A DEFECTIVE MOTOR CONTROL UNIT**. 2. **CHECK THE MOONROOF MOTOR**. 3. **Check the glass position adjustment** See **MOONROOF GLASS POSITION ADJUSTMENT** or **MOONROOF GLASS REMOVAL AND INSTALLATION**. 4. Check the sliding parts.
Moonroof glass does not move, but motor turns	1. Check for foreign matter stuck between the guide rail and the slider. 2. Make sure the cable assembly is attached properly. 3. Check for a loose inner cable. 4. Check for a defective gear or inner cable.
Moonroof glass does not move and motor does not turn	1. **CHECK FOR A RUN DOWN BATTERY** . 2. Check for a blown fuse. 3. **CHECK FOR A FAULTY MOONROOF SWITCH**. 4. **CHECK FOR A DEFECTIVE MOTOR CONTROL UNIT**.
	1. **RESET THE MOONROOF CONTROL UNIT**.

GETtheMANUALS.org

Moonroof glass does not stop at proper flush closed position	2. **Check the glass position adjustment** See **MOONROOF GLASS POSITION ADJUSTMENT** or **MOONROOF GLASS REMOVAL AND INSTALLATION**.
During auto close operation, moonroof glass reverses when no object is trapped	1. Check for dirt and debris in the track. 2. **RESET THE MOONROOF CONTROL UNIT**.
Moonroof glass moves, but there is no AUTO function	**RESET THE MOONROOF CONTROL UNIT**.

MOONROOF DRAIN CHANNEL REMOVAL AND INSTALLATION

REMOVAL

1. Moonroof Link Cover - Both Sides

NOTE: Repeat on the opposite side.

1. Carefully pry out the cover (A), then remove the screw (B).
2. Remove the moonroof link cover (C).

Fig. 1: Removing Moonroof Link Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Moonroof Glass
   1. Remove the TORX screws (A) with a TORX T25 bit from the glass brackets (B) on both sides.

GETtheMANUALS.org

Fig. 2: Identifying Moonroof Glass Bracket And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the moonroof glass (A) by lifting it up. Do not damage the roof panel.

Fig. 3: Removing Moonroof Glass
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Drain Channel
    1. On both sides, slide the glass brackets (A) with the moonroof switch to the position where the moonroof normally tilts up.
    2. Disconnect the drain channel rods (B).

GETtheMANUALS.org

Fig. 4: Disconnecting Drain Channel Rods And Glass Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Slide the drain channel (A) forward.

Fig. 5: Sliding Drain Channel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Pull up the rear edge of the drain channel (A) while pushing both clips (B), and release the channel from both hooks (C) of the drain channel slider by pulling it rearward.
5. Remove the drain channel.

GETtheMANUALS.org

Fig. 6: Removing Drain Channel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Drain Channel
    1. Install the drain channel (A).

Fig. 7: Installing Drain Channel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Slide the drain channel (A) rearward.

GETtheMANUALS.org

Fig. 8: Sliding Drain Channel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Connect the drain channel rods (A).
4. Tilt down the glass bracket (B).

Fig. 9: Connecting Drain Channel Rods
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Moonroof Glass
    1. Install the moonroof glass (A).

GETtheMANUALS.org

Fig. 10: Installing Moonroof Glass
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the TORX screws (A).
3. Repeat on the opposite side.

Fig. 11: Identifying Torx Screws With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Moonroof Glass - Position Check

   The roof panel (A) should be even with the glass weatherstrip (B), to within 0+1/-1 mm (0-0.04/+0.04 in) all the way around.

GETtheMANUALS.org

Fig. 12: Identifying Roof Panel And Glass Weatherstrip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Moonroof Glass - Position Adjustment
    1. Slightly loosen the TORX screws with a TORX T25 bit.
    2. Move the glass (A) up or down and forward or rearward.
    3. Tighten all screws securely.
    4. If necessary, repeat on the opposite side.

Fig. 13: Moving Moonroof Glass And Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Moonroof Link Cover - Both Sides

NOTE: Repeat on the opposite side

1. Install the moonroof link cover (A), then install the screw (B).
2. Install the cover (C).

GETtheMANUALS.org

Fig. 14: Installing Moonroof Link Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Moon Roof Control Unit - Reset
    1. **DO THE MOON ROOF CONTROL UNIT RESETTING PROCEDURE**.

MOONROOF DRAIN TUBE REMOVAL AND INSTALLATION

SPECIAL TOOL DESCRIPTION

Image	Description/Tool Number
	Push Pin/Grab Rail Cap Pliers 07AAC-001A100

REMOVAL

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

GETtheMANUALS.org

1. Battery Terminal (SRS) - Disconnection
    1. Make sure the ignition switch is in LOCK (0).
    2. Disconnect and isolate the negative cable (A) from the battery.

    NOTE: Always disconnect the negative side first.

    3. Disconnect the positive cable (B) from the battery.
    4. Wait at least 3 minutes before starting work.

Fig. 15: Identifying Battery (SRS) Negative And Positive Terminal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Door Sill Trim - Both Sides

NOTE: Repeat on the opposite side.

    1. Detach the hooks (A) and the tabs (B) from the kick panel (C) and the B-pillar lower trim (D), and pull up the front door inner sill trim (E) by hand to detach the clips (F), then remove the trim.

GETtheMANUALS.org

Fig. 16: Removing Front Door Sill Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Door Opening Seal As Needed - Both Sides

NOTE: Repeat on the opposite side.

1. Pull out the front door opening seal (A) from the trim hooks (B) around the front door opening flange, then detach the seal as needed.

Fig. 17: Removing Front Door Opening Seal From Trim Hooks

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. A-Pillar Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Pull out the A-pillar trim (A) by hand to release the clips (B, C).

Fig. 18: Removing A-Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Put a shop towel (A) in the opening between the A-pillar trim (B) and the dashboard to prevent dropping the A-pillar clips.

Fig. 19: Placing Shop Towel In Opening Between A-Pillar Trim And Dashboard

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Pull out and up on the A-pillar trim (A) to release it from the dashboard.

NOTE: The upper clip will stay in the body.

Fig. 20: Releasing A-Pillar Trim From Dashboard
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the upper clip (A) from the body.

Fig. 21: Removing A-Pillar Trim Upper Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rear Door Sill Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Pull the release strap to fold down the rear seat, then lift-up and latch the rear seat-back in the

GETtheMANUALS.org

upright position.

2. Detach the hooks (A) and the tab (B) from the B-pillar lower trim (C) and the rear side trim panel (D), and pull up the rear door inner sill trim (E) by hand to detach the clips (F, G), then remove the trim.

Fig. 22: Removing Rear Door Sill Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Rear Door Opening Seal As Needed - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Pull out the rear door opening seal (A) from the trim hooks (B) around the rear door opening flange, then detach the seal as needed.

GETtheMANUALS.org

2. Moonroof Front Drain Tube - Both Sides

GETtheMANUALS.org

NOTE: **Repeat this procedure on the opposite side.**

1. Tie the string that was left in the A-pillar to the top end of a new moonroof front drain tube (A) and pull it up into the roof.
2. Connect the moonroof front drain tube.
3. Install the moonroof front drain valve (B) securing the clip (C).

Fig. 72: Identifying Moonroof Front Drain Tube, Valve And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Headliner - Check
   1. If the side curtain airbag has deployed, replace the headliner and removed trim pieces, along with the other parts listed for side curtain airbag deployment.
   2. To prevent the side curtain airbags from deploying improperly and possibly causing injury, inspect the headliner and all removed trim. Replace any pieces with the following damage:
      - Any creases or tears in the headliner (A)
      - Any damages around the grab handle holes (B) or the sunvisor holes (C) in the headliner
      - Any clip bases (D) which have come off the headliner
      - Any fasteners (E) or clip bases (F) which have come off the headliner

GETtheMANUALS.org

5. Sunvisor Holder
    1. Install the holder (A) into the holder grommet (B) by turning it 45 ° clockwise.
    2. Install the holder and the holder grommet as an assembly into the body by pushing it until the hooks snap into place securely.

GETtheMANUALS.org

Fig. 80: Identifying Sunvisor Holder And Grommet
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Sunvisor - Check
    1. If the side curtain airbag has deployed, replace the sunvisor, along with the other parts listed for side curtain airbag deployment.
    2. If the side curtain airbag has not deployed, inspect the sunvisor for damage. A damaged sunvisor may cause the side curtain airbags to deploy improperly, possibly causing injury. Replace the sunvisor if it has any of the following damage:

Fig. 81: Identifying Sunvisor Bracket, Cover, Shaft, Base And Mirror Base
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- Any cracks in the sunvisor bracket (A)
- Any cracks in the sunvisor bracket cover (B)
- Any bends or cracks in the sunvisor shaft (C)
- Any cracks in the sunvisor base (D)
- Any cracks in the vanity mirror base (E)

    3. If the holder grommet is damaged or stress-whitened, replace the holder grommet and the holder as an assembly.

GETtheMANUALS.org

7. Sunvisor - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Connect the connector (A), and install the sunvisor (B).

Fig. 82: Identifying Sunvisor And Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. While holding the bracket cover (A), rotate the sunvisor (B) forward until the tab (C) snaps into place.
3. Gently pull down on the sunvisor to make sure it is properly secured in the body.
4. Rotate the sunvisor into the holder (D).

Fig. 83: Rotating Sunvisor Into Holder

Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Quarter Pillar Trim - Check
    1. If the side curtain airbag has deployed, replace the quarter pillar trim (A), along with the other parts listed for side curtain airbag deployment.
    2. If the side curtain airbag has not deployed, check the quarter pillar trim and note the following items:
        - To prevent the side curtain airbags from deploying improperly and possibly causing injury, inspect the quarter pillar trim and replace it with a new one if it has any of the following damage:
            - Any cracks, deformations, or stress-whitening in the quarter pillar trim
            - Any cracks or stress-whitened areas in the clip seating surfaces (B)
        - After checking and adjusting the overlap between the headliner and the quarter pillar trim, replace the upper clip (C) with a new one.
        - If the clips (D) are damaged or stress-whitened, replace them with new ones.

GETtheMANUALS.org

Fig. 93: Identifying Quarter Pillar Trim Upper Clip And Clip Seating Surfaces
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Headliner/Pillar Trim Overlap - Check

Checking and Adjusting the Headliner/Pillar Trim Overlap

To prevent the side curtain airbag from deploying and damaging the pillar trim (A-pillar trim, B-pillar trim, quarter pillar trim), the overlap between the headliner and pillar trim must be 8.0+0/-2.0 mm (0.31+0/-0.08 in). To check the overlap, do this:

1. Install the headliner (A) and the pillar trim (B).

GETtheMANUALS.org

This illustration shows the A-pillar.

Fig. 94: Identifying Headliner And Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Apply masking tape (A) to the headliner (B) to mark the upper edge of the pillar trim (C).

This illustration shows the A-pillar.

Fig. 95: Applying Mask Tape To Headliner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the pillar trim, and measure the headliner overlap.
   - If the overlap is 8.0+0/-2.0 mm (0.31+0/-0.08 in), remove the tape, and install the pillar trim.
   - If the overlap is more than 8.0 mm (0.31 in), go to step 4.

GETtheMANUALS.org

Fig. 96: Measuring Headliner Overlap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Carefully trim the headliner with a utility knife, reducing the overlap to 8.0+0/-2.0 mm (0.31+0/-0.08 in).
5. Remove the tape, and install the pillar trim.

Fig. 97: Triming Headliner Using Utility Knife
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Quarter Pillar Trim - Both Sides
    1. Install a new clip (A) to the quarter pillar trim (B).

GETtheMANUALS.org

Fig. 98: Installing Quarter Pillar Trim Into Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Pass the rear seat belt lower anchor (A) through the hole in the quarter pillar trim (B).
3. Fit the clips into the holes in the quarter pillar.
4. Lightly push the quarter pillar trim into place, then install the trim.

NOTE:

- **Make sure the side curtain airbag is not tucked under the clips or the ribs.**
- **Do not push too hard on the quarter pillar trim. If you push too hard, the clip will be damaged, and it will not hold the trim properly.**
- **Gently tug on the quarter pillar trim to verify that all clips are securely fastened.**
- **Make sure the clips (C, D, and E) snap into place securely.**

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

27. B-Pillar Upper/Lower Trim - Check
    1. If the side curtain airbag has deployed, replace the B-pillar upper trim (A) and the B-pillar lower trim (B), along with the other parts listed for side curtain airbag deployment.
    2. If the side curtain airbag has not deployed, check the B-pillar upper/lower trim and note the following items:
        - To prevent the side curtain airbags from deploying improperly and possibly causing injury, inspect the trim and replace it with a new one if it has any of the following damage:
            - Any cracks or deformations in the B-pillar upper trim or the upper hooks (C), or any stress-whitened areas in the upper part of the trim
            - Any cracks or deformations in the B-pillar lower trim, or any breakages in the part (D) fitted with the B-pillar upper trim
            - Any cracks or stress-whitening areas in the clip seating surfaces (E)
        - If the clips (F) are damaged or stress-whitened, replace them with new ones.

Trim inspection

28. Headliner/Pillar Trim Overlap - Check

Checking and Adjusting the Headliner/Pillar Trim Overlap

To prevent the side curtain airbag from deploying and damaging the pillar trim (A-pillar trim, B-pillar trim, quarter pillar trim), the overlap between the headliner and pillar trim must be 8.0+0/-2.0 mm (0.31+0/-0.08 in). To check the overlap, do this:

1. Install the headliner (A) and the pillar trim (B).

This illustration shows the A-pillar.

GETtheMANUALS.org

Fig. 119: Identifying Headliner And Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Apply masking tape (A) to the headliner (B) to mark the upper edge of the pillar trim (C).

Fig. 120: Applying Mask Tape To Headliner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the pillar trim, and measure the headliner overlap.
   - If the overlap is 8.0+0/-2.0 mm (0.31+0/-0.08 in), remove the tape, and install the pillar trim.
   - If the overlap is more than 8.0 mm (0.31 in), go to step 4.

Fig. 121: Measuring Headliner Overlap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Carefully trim the headliner with a utility knife, reducing the overlap to 8.0+0/-2.0 mm (0.31+0/-0.08 in).
5. Remove the tape, and install the pillar trim.

GETtheMANUALS.org

This illustration shows the A-pillar.

Fig. 122: Triming Headliner Using Utility Knife
Courtesy of AMERICAN HONDA MOTOR CO., INC.

29. B-Pillar Upper Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Install the upper hook (A) of the B-pillar upper trim (B) to the hole in the body. Push the bottom portion of the B-pillar upper trim to install the lower hooks (C). Make sure the hooks snap into place securely.

Fig. 123: Installing Upper Hook Of B-Pillar Upper Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

30. Front Seat Belt Upper Anchor Bolt - Both Sides

GETtheMANUALS.org

NOTE: **Repeat this procedure on the opposite side.**

1. Install the front seat belt upper anchor bolt, then install the front seat belt shoulder anchor adjuster cap (A).

Fig. 124: Identifying Front Seat Belt Shoulder Anchor Adjuster Cap With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

31. B-Pillar Lower Trim - Both Sides

NOTE: **Repeat this procedure on the opposite side.**

1. Install the B-pillar lower trim (A). Make sure the clips (B) and the hooks (C) snap into place securely.

GETtheMANUALS.org

Fig. 125: Installing B-Pillar Lower Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

32. Rear Door Opening Seal As Needed - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Install the rear door opening seal (A). Make sure the seal is installed securely into the hooks (B).

GETtheMANUALS.org

Fig. 126: Installing Rear Door Opening Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

33. Rear Door Sill Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Pull the release strap to fold down the rear seat, then lift-up and latch the rear seat-back in the upright position.
2. Install the rear door inner sill trim (A). Make sure the clips (B, C), the hooks (D), and the tab (E) snap into place securely.

Fig. 127: Installing Rear Door Inner Sill Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

34. A-Pillar Trim - Check
    1. If the side curtain airbag has deployed, replace the A-pillar trim (A), along with the other parts listed for side curtain airbag deployment.
    2. If the side curtain airbag has not deployed, check the A-pillar trim and note the following items:
        - To prevent the side curtain airbags from deploying improperly and possibly causing injury, inspect the A-pillar trim and replace it with a new one if it has any of the following damage:
            - Any cracks, deformations, or stress-whitened areas in the A-pillar trim
            - Any cracks or stress-whitening in the clip seating surfaces (B)
        - After checking and adjusting the overlap between the headliner and the A-pillar trim, replace the upper clip (C) with a new one.
        - If the clips (D) are damaged or stress-whitened, replace them with new ones.

GETtheMANUALS.org

Fig. 128: Identifying Headliner And Pillar Trim

35. Headliner/Pillar Trim Overlap - Check

Checking and Adjusting the Headliner/Pillar Trim Overlap

To prevent the side curtain airbag from deploying and damaging the pillar trim (A-pillar trim, B-pillar trim, quarter pillar trim), the overlap between the headliner and pillar trim must be 8.0+0/-2.0 mm (0.31+0/-0.08 in). To check the overlap, do this:

1. Install the headliner (A) and the pillar trim (B).

This illustration shows the A-pillar.

GETtheMANUALS.org

Fig. 129: Identifying Headliner And Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Apply masking tape (A) to the headliner (B) to mark the upper edge of the pillar trim (C).

This illustration shows the A-pillar.

Fig. 130: Applying Mask Tape To Headliner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the pillar trim, and measure the headliner overlap.
   - If the overlap is 8.0+0/-2.0 mm (0.31+0/-0.08 in), remove the tape, and install the pillar trim.
   - If the overlap is more than 8.0 mm (0.31 in), go to step 4.

This illustration shows the A-pillar.

Fig. 131: Measuring Headliner Overlap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Carefully trim the headliner with a utility knife, reducing the overlap to 8.0+0/-2.0 mm (0.31+0/-0.08 in).
5. Remove the tape, and install the pillar trim.

GETtheMANUALS.org

Fig. 132: Triming Headliner Using Utility Knife
Courtesy of AMERICAN HONDA MOTOR CO., INC.

36. A-Pillar Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Carefully install a new upper clip (A) to the A-pillar trim (B).

Fig. 133: Installing Upper Clip To A-Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Insert the bottom portion of the A-pillar trim (A) into the dashboard (B). Place the trim over the A-

GETtheMANUALS.org

pillar (C), and fit its upper clip (D) and the other clips (E) into the holes (F) in the A-pillar, then lightly push the trim into place.

NOTE:

- **Make sure the side curtain airbag is not tucked under the clips or the trim ribs.**
- **Do not push too hard on the A-pillar trim. If you push too hard, the clip will be damaged, and it will not hold the trim properly.**
- **Gently tug on the A-pillar trim to verify that all clips are securely fastened.**

Fig. 134: Inserting Bottom Portion Of A-Pillar Trim Into Dashboard
Courtesy of AMERICAN HONDA MOTOR CO., INC.

37. Front Door Opening Seal As Needed - Both Sides

NOTE: **Repeat this procedure on the opposite side.**

1. Install the front door opening seal (A). Make sure the seal is installed securely into the hooks (B).

GETtheMANUALS.org

Fig. 135: Installing Front Door Opening Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

38. Front Door Sill Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Install the front door inner sill trim (A). Make sure the clips (B), the hooks (C), and the tabs (D) snap into place securely.

Fig. 136: Identifying Front Door Sill Trim, Hooks, Tabs And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

39. Battery Terminal (SRS) - Reconnection

NOTE: If the battery performance is abnormal, test the battery.

1. Clean the battery terminals.
2. Connect the positive cable (A) to the battery.

NOTE: Always connect the positive side first.

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

REMOVAL

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

1. Battery Terminal (SRS) - Disconnection
    1. Make sure the ignition switch is in LOCK (0).
    2. Disconnect and isolate the negative cable (A) from the battery.

    NOTE: Always disconnect the negative side first.

    3. Disconnect the positive cable (B) from the battery.
    4. Wait at least 3 minutes before starting work.

Fig. 139: Identifying Battery Positive And Negative Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

2. Front Door Sill Trim - Both Sides

NOTE: Repeat on the opposite side.

1. Detach the hooks (A) and the tabs (B) from the kick panel (C) and the B-pillar lower trim (D), and pull up the front door inner sill trim (E) by hand to detach the clips (F), then remove the trim.

Fig. 140: Identifying B-Pillar Lower Trim, Front Door Inner Sill Trim, Kick Panel, Tabs, Hooks And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Door Opening Seal As Needed - Both Sides

NOTE: Repeat on the opposite side.

1. Pull out the front door opening seal (A) from the trim hooks (B) around the front door opening flange, then detach the seal as needed.

GETtheMANUALS.org

Fig. 141: Pulling Front Door Opening Seal From Trim Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. A-Pillar Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Pull out the A-pillar trim (A) by hand to release the clips (B, C).

Fig. 142: Pulling A-Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

2. Put a shop towel (A) in the opening between the A-pillar trim (B) and the dashboard to prevent dropping the A-pillar clips.

Fig. 143: Placing Shop Towel In Opening Between A-Pillar Trim And Dashboard
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Pull out and up on the A-pillar trim (A) to release it from the dashboard.

NOTE: The upper clip will stay in the body.

Fig. 144: Releasing A-Pillar Trim From Dashboard
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the upper clip (A) from the body.

GETtheMANUALS.org

Fig. 145: Removing A-Pillar Trim Upper Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rear Door Sill Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Pull the release strap to fold down the rear seat, then lift-up and latch the rear seat-back in the upright position.
2. Detach the hooks (A) and the tab (B) from the B-pillar lower trim (C) and the rear side trim panel (D), and pull up the rear door inner sill trim (E) by hand to detach the clips (F, G), then remove the trim.

Fig. 146: Removing Rear Door Inner Sill Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

6. Rear Door Opening Seal As Needed - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Pull out the rear door opening seal (A) from the trim hooks (B) around the rear door opening flange, then detach the seal as needed.

Fig. 147: Pulling Rear Door Opening Seal From Trim Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. B-Pillar Lower Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Slide the front seat forward fully.
2. Pull back the bottom portion of the B-pillar lower trim (A) by hand to detach the clips (B).
3. Pull back the upper portion of the B-pillar lower trim to detach the upper hooks (C), then remove the B-pillar lower trim.

GETtheMANUALS.org

Fig. 148: Removing B-Pillar Lower Trim

33. Moonroof Sunshade
    1. Slide the sunshade (A) until you can see both sunshade slider spacers (B).
    2. Remove the screws (C), then remove both sunshade slider spacers.

Fig. 200: Identifying Moonroof Sunshade, Slider Spacers And Screws

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. While lifting the front portion of the sunshade (A), move the sunshade forward until you can see both sunshade rear hooks (B). Do not damage the sunshade or the hooks.
4. Remove the screws (C), then remove both hooks.

Fig. 201: Identifying Moonroof Sunshade, Rear Hooks And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the sunshade (A).

Fig. 202: Removing Moonroof Sunshade
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove both front sunshade base sliders (A) and both rear sunshade base sliders (B).

GETtheMANUALS.org

Fig. 203: Removing Front And Rear Sunshade Base Sliders
Courtesy of AMERICAN HONDA MOTOR CO., INC.

34. Moonroof Motor
    1. Disconnect the connector (A), and remove the screws (B), then remove the motor (C).

Fig. 204: Identifying Moonroof Motor, Connector And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

35. Moonroof Frame
    1. Disconnect the moonroof front drain tubes (A) and the moonroof rear drain tubes (B).

GETtheMANUALS.org

Fig. 205: Identifying Moonroof Front And Rear Drain Tubes
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Detach the harness clips (A).
3. Remove the moonroof wire harness (B)

Fig. 206: Identifying Moonroof Wire Harness And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. With an assistant holding the frame (A), remove the bolts (B), starting at the rear, and release the rear hook (C) by moving the frame forward.
5. With the help of an assistant, carefully remove the frame through the tailgate opening.

GETtheMANUALS.org

Fig. 207: Moving Frame Forward
Courtesy of AMERICAN HONDA MOTOR CO., INC.

36. Moonroof Drain Channel Slider
    1. Remove the screws (A, B).
    2. Remove the cable tube side bracket mounting bolts (C) and the cable tube mounting screws (D).
    3. Repeat on the opposite side.

GETtheMANUALS.org

Fig. 208: Identifying Moonroof Drain Channel Slider Cable Tube Side Bracket Mounting Bolts And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Turn both cable tube side brackets (A) up to release the hooks (B) from the holes in both sides of the frame.
5. Pivot the glass brackets (C) down by sliding the link lifters (D) back, then slide both glass brackets back with the link lifters.
6. Slide the moonroof cable assembly (E) half-way.

GETtheMANUALS.org

Fig. 209: Pivoting Glass Brackets
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove both moonroof drain channel sliders (A).

Fig. 210: Removing Moonroof Drain Channel Sliders
Courtesy of AMERICAN HONDA MOTOR CO., INC.

37. Moonroof Cable
    1. Slide the cable assembly (A) and both glass brackets (B) back, remove the deflector sliders (C) from both glass brackets, then remove them from the frame (D).

GETtheMANUALS.org

INSTALLATION

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

1. Moonroof Cable
    1. Install the moonroof cable assembly (A).

GETtheMANUALS.org

Fig. 212: Installing Moonroof Cable Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Moonroof Drain Channel Slider
    1. Apply multipurpose grease to the glass bracket (A) and the guide rail area of the frame (B) indicated by the arrows.

Fig. 213: Identifying Moonroof Drain Channel Slider Grease Applying Area
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Install both moonroof drain channel sliders (A).

GETtheMANUALS.org

Fig. 214: Installing Moonroof Drain Channel Sliders
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the moonroof cable assembly (A).
4. Install both glass brackets (B).
5. Install both cable tube side brackets (C).

Fig. 215: Installing Moonroof Cable Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the cable tube side bracket mounting bolts (A) and the cable tube mounting screws (B).
7. Install the screws (C, D).
8. Repeat on the opposite side.

GETtheMANUALS.org

Fig. 216: Identifying Moonroof Drain Channel Slider Cable Tube Side Bracket Mounting Bolts And Screws

9. Moonroof Link Cover - Both Sides

NOTE: Repeat on the opposite side

1. Install the moonroof link cover (A), then install the screw (B).
2. Install the cover (C).

Fig. 233: Installing Moonroof Link Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Headliner - Check

GETtheMANUALS.org

1. If the side curtain airbag has deployed, replace the headliner and removed trim pieces, along with the other parts listed for side curtain airbag deployment.
2. To prevent the side curtain airbags from deploying improperly and possibly causing injury, inspect the headliner and all removed trim. Replace any pieces with the following damage:
    - Any creases or tears in the headliner (A)
    - Any damages around the grab handle holes (B) or the sunvisor holes (C) in the headliner
    - Any clip bases (D) which have come off the headliner
    - Any fasteners (E) or clip bases (F) which have come off the headliner

Fig. 234: Identifying Headliner, Grab Handle Holes, Sunvisor Holes, Clip Bases, Fasteners And Clip Bases
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Headliner
    1. With the help of an assistant, slide the headliner (A) through the tailgate opening.

NOTE: **Do not bend the headliner. Bending the headliner will crease and damage it.**

GETtheMANUALS.org

Fig. 235: Identifying Headliner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. With the help of an assistant, install the headliner (A), then push on the clips (B) and the fasteners (C) which will snap into place securely.

Without moonroof

Fig. 236: Identifying Headliner, Fasteners And Clips (Without Moonroof)

5. Without moonroof: At the driver's A-pillar, connect the connector (A), and install the harness clips (B).

Fig. 240: Identifying Driver A-Pillar Connector And Clips (Without Moonroof)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Sunvisor Holder
    1. Install the holder (A) into the holder grommet (B) by turning it 45 ° clockwise.
    2. Install the holder and the holder grommet as an assembly into the body by pushing it until the hooks snap into place securely.

GETtheMANUALS.org

Fig. 241: Identifying Sunvisor Holder And Grommet
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Sunvisor - Check
    1. If the side curtain airbag has deployed, replace the sunvisor, along with the other parts listed for side curtain airbag deployment.
    2. If the side curtain airbag has not deployed, inspect the sunvisor for damage. A damaged sunvisor may cause the side curtain airbags to deploy improperly, possibly causing injury. Replace the sunvisor if it has any of the following damage:
        - Any cracks in the sunvisor bracket (A)
        - Any cracks in the sunvisor bracket cover (B)
        - Any bends or cracks in the sunvisor shaft (C)
        - Any cracks in the sunvisor base (D)
        - Any cracks in the vanity mirror base (E)

Fig. 242: Identifying Sunvisor Bracket, Cover, Shaft, Base And Mirror Base
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. If the holder grommet is damaged or stress-whitened, replace the holder grommet and the holder as an assembly.

GETtheMANUALS.org

14. Sunvisor - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Connect the connector (A), and install the sunvisor (B).

Fig. 243: Identifying Sunvisor And Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. While holding the bracket cover (A), rotate the sunvisor (B) forward until the tab (C) snaps into place.
3. Gently pull down on the sunvisor to make sure it is properly secured in the body.
4. Rotate the sunvisor into the holder (D).

Fig. 244: Rotating Sunvisor Into Holder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

15. Grab Handle - Check
    1. If the side curtain airbag has not deployed, inspect the grab handle (A) for damage. A damaged grab handle may cause the side curtain airbag to deploy improperly, possibly causing injury. Replace the grab handle if it has any of the following damage:
        - Any cracks or breakage in the grab handle
        - Any cracks or stress-whitening in the caps (B)

Fig. 245: Identifying Grab Handle And Caps
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Grab Handles for One Vehicle
    1. Install the clips (A) on the grab handle (B).
    2. Install the caps (C) fully into the clips.

Fig. 246: Installing Clips On Grab Handle
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Position the grab handle (A) on the grab handle bracket (B).
    4. Push on the grab handle until the clips (C) snap into place securely.

GETtheMANUALS.org

22. Quarter Pillar Trim - Check
    1. If the side curtain airbag has deployed, replace the quarter pillar trim (A), along with the other parts listed for side curtain airbag deployment.
    2. If the side curtain airbag has not deployed, check the quarter pillar trim and note the following items:
        - To prevent the side curtain airbags from deploying improperly and possibly causing injury, inspect the quarter pillar trim and replace it with a new one if it has any of the following damage:
            - Any cracks, deformations, or stress-whitening in the quarter pillar trim
            - Any cracks or stress-whitened areas in the clip seating surfaces (B)
        - After checking and adjusting the overlap between the headliner and the quarter pillar trim, replace the upper clip (C) with a new one.
        - If the clips (D) are damaged or stress-whitened, replace them with new ones.

GETtheMANUALS.org

Fig. 254: Identifying Quarter Pillar Trim Upper Clip And Clip Seating Surfaces
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Headliner/Pillar Trim Overlap - Check

Checking and Adjusting the Headliner/Pillar Trim Overlap

To prevent the side curtain airbag from deploying and damaging the pillar trim (A-pillar trim, B-pillar trim, quarter pillar trim), the overlap between the headliner and pillar trim must be 8.0+0/-2.0 mm (0.31+0/-0.08 in). To check the overlap, do this:

1. Install the headliner (A) and the pillar trim (B).

GETtheMANUALS.org

This illustration shows the A-pillar.

Fig. 255: Identifying Headliner And Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Apply masking tape (A) to the headliner (B) to mark the upper edge of the pillar trim (C).

This illustration shows the A-pillar.

Fig. 256: Applying Mask Tape To Headliner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the pillar trim, and measure the headliner overlap.
   - If the overlap is 8.0+0/-2.0 mm (0.31+0/-0.08 in), remove the tape, and install the pillar trim.
   - If the overlap is more than 8.0 mm (0.31 in), go to step 4.

GETtheMANUALS.org

Fig. 257: Measuring Headliner Overlap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Carefully trim the headliner with a utility knife, reducing the overlap to 8.0+0/-2.0 mm (0.31+0/-0.08 in).
5. Remove the tape, and install the pillar trim.

Fig. 258: Triming Headliner Using Utility Knife
Courtesy of AMERICAN HONDA MOTOR CO., INC.

24. Quarter Pillar Trim - Both Sides
    1. Install a new clip (A) to the quarter pillar trim (B).

GETtheMANUALS.org

Fig. 259: Installing Quarter Pillar Trim Into Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Pass the rear seat belt lower anchor (A) through the hole in the quarter pillar trim (B).
3. Fit the clips into the holes in the quarter pillar.
4. Lightly push the quarter pillar trim into place, then install the trim.

NOTE:

- **Make sure the side curtain airbag is not tucked under the clips or the ribs.**
- **Do not push too hard on the quarter pillar trim. If you push too hard, the clip will be damaged, and it will not hold the trim properly.**
- **Gently tug on the quarter pillar trim to verify that all clips are securely fastened.**
- **Make sure the clips (C, D, and E) snap into place securely.**

GETtheMANUALS.org

33. Tonneau Cover (For Some Models)
    1. Install the tonneau cover (A).

GETtheMANUALS.org

Fig. 278: Installing Tonneau Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

34. B-Pillar Upper/Lower Trim - Check
    1. If the side curtain airbag has deployed, replace the B-pillar upper trim (A) and the B-pillar lower trim (B), along with the other parts listed for side curtain airbag deployment.
    2. If the side curtain airbag has not deployed, check the B-pillar upper/lower trim and note the following items:
        - To prevent the side curtain airbags from deploying improperly and possibly causing injury, inspect the trim and replace it with a new one if it has any of the following damage:
            - Any cracks or deformations in the B-pillar upper trim or the upper hooks (C), or any stress-whitened areas in the upper part of the trim
            - Any cracks or deformations in the B-pillar lower trim, or any breakages in the part (D) fitted with the B-pillar upper trim
            - Any cracks or stress-whitening areas in the clip seating surfaces (E)
        - If the clips (F) are damaged or stress-whitened, replace them with new ones.

Trim inspection

GETtheMANUALS.org

Fig. 279: Identifying B-Pillar Upper/Lower Trim And Related Components
Courtesy of AMERICAN HONDA MOTOR CO., INC.

35. Headliner/Pillar Trim Overlap - Check

Checking and Adjusting the Headliner/Pillar Trim Overlap

To prevent the side curtain airbag from deploying and damaging the pillar trim (A-pillar trim, B-pillar trim, quarter pillar trim), the overlap between the headliner and pillar trim must be 8.0+0/-2.0 mm (0.31+0/-0.08 in). To check the overlap, do this:

1. Install the headliner (A) and the pillar trim (B).

This illustration shows the A-pillar.

GETtheMANUALS.org

Fig. 280: Identifying Headliner And Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Apply masking tape (A) to the headliner (B) to mark the upper edge of the pillar trim (C).

This illustration shows the A-pillar.

Fig. 281: Applying Mask Tape To Headliner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the pillar trim, and measure the headliner overlap.
   - If the overlap is 8.0+0/-2.0 mm (0.31+0/-0.08 in), remove the tape, and install the pillar trim.
   - If the overlap is more than 8.0 mm (0.31 in), go to step 4.

This illustration shows the A-pillar.

Fig. 282: Measuring Headliner Overlap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Carefully trim the headliner with a utility knife, reducing the overlap to 8.0+0/-2.0 mm (0.31+0/-0.08 in).
5. Remove the tape, and install the pillar trim.

GETtheMANUALS.org

This illustration shows the A-pillar.

Fig. 283: Triming Headliner Using Utility Knife
Courtesy of AMERICAN HONDA MOTOR CO., INC.

36. B-Pillar Upper Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Install the upper hook (A) of the B-pillar upper trim (B) to the hole in the body. Push the bottom portion of the B-pillar upper trim to install the lower hooks (C). Make sure the hooks snap into place securely.

Fig. 284: Installing Upper Hook Of B-Pillar Upper Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

37. Front Seat Belt Upper Anchor Bolt - Both Sides

GETtheMANUALS.org

NOTE: **Repeat this procedure on the opposite side.**

1. Install the front seat belt upper anchor bolt, then install the front seat belt shoulder anchor adjuster cap (A).

Fig. 285: Identifying Front Seat Belt Shoulder Anchor Adjuster Cap With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

38. B-Pillar Lower Trim - Both Sides

NOTE: **Repeat this procedure on the opposite side.**

1. Install the B-pillar lower trim (A). Make sure the clips (B) and the hooks (C) snap into place securely.

GETtheMANUALS.org

Fig. 286: Installing B-Pillar Lower Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

39. Rear Door Opening Seal As Needed - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Install the rear door opening seal (A). Make sure the seal is installed securely into the hooks (B).

GETtheMANUALS.org

Fig. 287: Installing Rear Door Opening Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

40. Rear Door Sill Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Pull the release strap to fold down the rear seat, then lift-up and latch the rear seat-back in the upright position.
2. Install the rear door inner sill trim (A). Make sure the clips (B, C), the hooks (D), and the tab (E) snap into place securely.

Fig. 288: Removing Rear Door Inner Sill Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

41. A-Pillar Trim - Check
    1. If the side curtain airbag has deployed, replace the A-pillar trim (A), along with the other parts listed for side curtain airbag deployment.
    2. If the side curtain airbag has not deployed, check the A-pillar trim and note the following items:
        - To prevent the side curtain airbags from deploying improperly and possibly causing injury, inspect the A-pillar trim and replace it with a new one if it has any of the following damage:
            - Any cracks, deformations, or stress-whitened areas in the A-pillar trim
            - Any cracks or stress-whitening in the clip seating surfaces (B)
        - After checking and adjusting the overlap between the headliner and the A-pillar trim, replace the upper clip (C) with a new one.
        - If the clips (D) are damaged or stress-whitened, replace them with new ones.

42. Headliner/Pillar Trim Overlap - Check

Checking and Adjusting the Headliner/Pillar Trim Overlap

To prevent the side curtain airbag from deploying and damaging the pillar trim (A-pillar trim, B-pillar trim, quarter pillar trim), the overlap between the headliner and pillar trim must be 8.0+0/-2.0 mm (0.31+0/-0.08 in). To check the overlap, do this:

1. Install the headliner (A) and the pillar trim (B).

This illustration shows the A-pillar.

GETtheMANUALS.org

Fig. 290: Identifying Headliner And Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Apply masking tape (A) to the headliner (B) to mark the upper edge of the pillar trim (C).

This illustration shows the A-pillar.

Fig. 291: Applying Mask Tape To Headliner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the pillar trim, and measure the headliner overlap.
   - If the overlap is 8.0+0/-2.0 mm (0.31+0/-0.08 in), remove the tape, and install the pillar trim.
   - If the overlap is more than 8.0 mm (0.31 in), go to step 4.

This illustration shows the A-pillar.

Fig. 292: Measuring Headliner Overlap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Carefully trim the headliner with a utility knife, reducing the overlap to 8.0+0/-2.0 mm (0.31+0/-0.08 in).
5. Remove the tape, and install the pillar trim.

GETtheMANUALS.org

This illustration shows the A-pillar.

Fig. 293: Triming Headliner Using Utility Knife
Courtesy of AMERICAN HONDA MOTOR CO., INC.

43. A-Pillar Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Carefully install a new upper clip (A) to the A-pillar trim (B).

Fig. 294: Installing Upper Clip To A-Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Insert the bottom portion of the A-pillar trim (A) into the dashboard (B). Place the trim over the A-

GETtheMANUALS.org

pillar (C), and fit its upper clip (D) and the other clips (E) into the holes (F) in the A-pillar, then lightly push the trim into place.

NOTE:

- **Make sure the side curtain airbag is not tucked under the clips or the trim ribs.**
- **Do not push too hard on the A-pillar trim. If you push too hard, the clip will be damaged, and it will not hold the trim properly.**
- **Gently tug on the A-pillar trim to verify that all clips are securely fastened.**

Fig. 295: Inserting Bottom Portion Of A-Pillar Trim Into Dashboard
Courtesy of AMERICAN HONDA MOTOR CO., INC.

44. Front Door Opening Seal As Needed - Both Sides

NOTE: **Repeat this procedure on the opposite side.**

1. Install the front door opening seal (A). Make sure the seal is installed securely into the hooks (B).

GETtheMANUALS.org

Fig. 296: Inserting Bottom Portion Of A-Pillar Trim Into Dashboard
Courtesy of AMERICAN HONDA MOTOR CO., INC.

45. Front Door Sill Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Install the front door inner sill trim (A). Make sure the clips (B), the hooks (C), and the tabs (D) snap into place securely.

Fig. 297: Identifying Front Door Sill Trim, Hooks, Tabs And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

46. Battery Terminal (SRS) - Reconnection

NOTE: If the battery performance is abnormal, test the battery.

1. Clean the battery terminals.
2. Connect the positive cable (A) to the battery.

NOTE: Always connect the positive side first.

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

Fig. 298: Identifying Battery Positive And Negative Cable With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

47. Moon Roof Control Unit - Reset
    1. **DO THE MOON ROOF CONTROL UNIT RESETTING PROCEDURE**.

MOONROOF GLASS POSITION ADJUSTMENT

REMOVAL

1. Moonroof Glass - Position Check

The roof panel (A) should be even with the glass weatherstrip (B), to within 0+1/-1 mm (0+0.04/-0.04 in) all the way around. If not, make the following adjustment:

GETtheMANUALS.org

Fig. 299: Identifying Roof Panel And Glass Weatherstrip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Moonroof Link Cover - Both Sides

NOTE: Repeat on the opposite side.

1. Carefully pry out the cover (A), then remove the screw (B).
2. Remove the moonroof link cover (C).

Fig. 300: Removing Moonroof Link Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

ADJUSTMENT

1. Moonroof Glass - Position Adjustment
    1. Slightly loosen the TORX screws with a TORX T25 bit.

GETtheMANUALS.org

2. Move the glass (A) up or down and forward or rearward.
3. Tighten all screws securely.
4. If necessary, repeat on the opposite side.

Fig. 301: Moving Moonroof Glass And Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Moonroof Link Cover - Both Sides

NOTE: Repeat on the opposite side

1. Install the moonroof link cover (A), then install the screw (B).
2. Install the cover (C).

GETtheMANUALS.org

Fig. 302: Installing Moonroof Link Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Moon Roof Control Unit - Reset
    1. **DO THE MOON ROOF CONTROL UNIT RESETTING PROCEDURE**.

MOONROOF GLASS REMOVAL AND INSTALLATION

REMOVAL

1. Moonroof Link Cover - Both Sides

    NOTE: Repeat on the opposite side.

    1. Carefully pry out the cover (A), then remove the screw (B).
    2. Remove the moonroof link cover (C).

GETtheMANUALS.org

Fig. 303: Removing Moonroof Link Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Moonroof Glass
    1. Remove the TORX screws (A) with a TORX T25 bit from the glass brackets (B) on both sides.

Fig. 304: Identifying Moonroof Glass Bracket And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the moonroof glass (A) by lifting it up. Do not damage the roof panel.

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Moonroof Glass
    1. Install the moonroof glass (A).

Fig. 306: Installing Moonroof Glass
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the TORX screws (A).
3. Repeat on the opposite side.

GETtheMANUALS.org

Fig. 307: Identifying TORX Screws With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Moonroof Glass - Position Check

   The roof panel (A) should be even with the glass weatherstrip (B), to within 0+1/-1 mm (0+0.04/-0.04 in) all the way around.

Fig. 308: Identifying Roof Panel And Glass Weatherstrip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Moonroof Glass - Position Adjustment
   1. Slightly loosen the TORX screws with a TORX T25 bit.
   2. Move the glass (A) up or down and forward or rearward.
   3. Tighten all screws securely.
   4. If necessary, repeat on the opposite side.

GETtheMANUALS.org

Fig. 309: Moving Moonroof Glass And Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Moonroof Link Cover - Both Sides

NOTE: Repeat on the opposite side

1. Install the moonroof link cover (A), then install the screw (B).
2. Install the cover (C).

Fig. 310: Installing Moonroof Link Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Moon Roof Control Unit - Reset
   1. **DO THE MOON ROOF CONTROL UNIT RESETTING PROCEDURE**.

	Push Pin/Grab Rail Cap Pliers 07AAC-001A100

REMOVAL

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

1. Battery Terminal (SRS) - Disconnection
    1. Make sure the ignition switch is in LOCK (0).
    2. Disconnect and isolate the negative cable (A) from the battery.

        NOTE: Always disconnect the negative side first.

    3. Disconnect the positive cable (B) from the battery.
    4. Wait at least 3 minutes before starting work.

GETtheMANUALS.org

Fig. 312: Identifying Battery Positive And Negative Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Door Sill Trim - Both Sides

NOTE: Repeat on the opposite side.

1. Detach the hooks (A) and the tabs (B) from the kick panel (C) and the B-pillar lower trim (D), and pull up the front door inner sill trim (E) by hand to detach the clips (F), then remove the trim.

Fig. 313: Pulling Front Door Inner Sill Trim Upside
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

3. Front Door Opening Seal As Needed - Both Sides

NOTE: Repeat on the opposite side.

1. Pull out the front door opening seal (A) from the trim hooks (B) around the front door opening flange, then detach the seal as needed.

Fig. 314: Pulling Front Door Opening Seal From Trim Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. A-Pillar Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Pull out the A-pillar trim (A) by hand to release the clips (B, C).

GETtheMANUALS.org

Fig. 315: Pulling A-Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Put a shop towel (A) in the opening between the A-pillar trim (B) and the dashboard to prevent dropping the A-pillar clips.

Fig. 316: Placing Shop Towel In Opening Between A-Pillar Trim And Dashboard
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Pull out and up on the A-pillar trim (A) to release it from the dashboard.

NOTE: The upper clip will stay in the body.

GETtheMANUALS.org

Fig. 317: Releasing A-Pillar Trim From Dashboard
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the upper clip (A) from the body.

Fig. 318: Removing A-Pillar Trim Upper Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rear Door Sill Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Pull the release strap to fold down the rear seat, then lift-up and latch the rear seat-back in the upright position.
2. Detach the hooks (A) and the tab (B) from the B-pillar lower trim (C) and the rear side trim panel (D), and pull up the rear door inner sill trim (E) by hand to detach the clips (F, G), then remove the trim.

GETtheMANUALS.org

Fig. 319: Removing Rear Door Inner Sill Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Rear Door Opening Seal As Needed - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Pull out the rear door opening seal (A) from the trim hooks (B) around the rear door opening flange, then detach the seal as needed.

Fig. 320: Pulling Rear Door Opening Seal From Trim Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

7. B-Pillar Lower Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Slide the front seat forward fully.
2. Pull back the bottom portion of the B-pillar lower trim (A) by hand to detach the clips (B).
3. Pull back the upper portion of the B-pillar lower trim to detach the upper hooks (C), then remove the B-pillar lower trim.

Fig. 321: Removing B-Pillar Lower Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Front Seat Belt Upper Anchor Bolt - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Remove the front seat belt shoulder anchor adjuster cap (A), then remove the front seat belt upper anchor bolt.

GETtheMANUALS.org

Fig. 322: Identifying Front Seat Belt Shoulder Anchor Adjuster Cap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. B-Pillar Upper Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Pull back the bottom portion of the B-pillar upper trim (A) by hand to detach the hooks (B). Pull down the trim to release the upper hook (C) from the hole (D) in the body, then remove the B-pillar upper trim.

Fig. 323: Removing B-Pillar Upper Trim

7. Remove the rear seat release lever (A) from the rear side trim panel (B).

Fig. 340: Identifying Rear Seat Release Lever And Rear Side Trim Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Detach the rear seat release cable (A) from the clips of the rear side trim panel (B), then remove the rear side trim panel.

Fig. 341: Identifying Rear Seat Release Cable And Side Trim Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Quarter Pillar Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Pull out the quarter pillar trim (A) by hand to detach the clips (B, C, and D).
2. Pass the rear seat belt lower anchor (E) out through the hole in the quarter pillar trim, then remove the quarter pillar trim.

GETtheMANUALS.org

Fig. 342: Identifying Quarter Pillar Trim, Rear Seat Belt Lower Anchor And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Roof Console Assembly
    1. Remove the lenses (A), then remove the screws (B).
    2. Open the console, then remove the screws (C).
    3. Disconnect the connectors (D), then remove the roof console assembly (E).

GETtheMANUALS.org

Fig. 343: Identifying Roof Console Assembly, Connectors, Lenses And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Ceiling Light (without RES)
    1. Turn the ceiling light switch OFF.
    2. Carefully pry off the lens (A).
    3. Remove the bulb.
    4. Remove the ceiling light (B).
    5. Disconnect the connector.

GETtheMANUALS.org

Fig. 344: Identifying Ceiling Light And Lens (Without RES)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Rear Display Cover (With RES)
    1. Turn the ceiling light switch OFF.
    2. Carefully pry off the lenses (A) with a flat-tip screwdriver.
    3. Remove the ceiling light (B).
    4. Disconnect the connector.

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Rear Controller and Screen (With RES)
    1. Disconnect the connector.
    2. Remove the rear controller and screen (A).

Fig. 347: Identifying Rear Controller And Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

24. Cargo Area Light
    1. Turn the cargo area light switch OFF.
    2. Carefully pry off the lens (A).
    3. Remove the bulb.
    4. Remove the cargo area light (B).
    5. Disconnect the connector.

Fig. 348: Identifying Cargo Area Light And Lens
Courtesy of AMERICAN HONDA MOTOR CO., INC.

25. Grab Handles for One Vehicle
    1. Lower the grab handle (A).
    2. Insert the tips of the push pin/grab rail cap pliers (B) into the notch.

GETtheMANUALS.org

Fig. 349: Inserting Tips Of Push Pin/Grab Rail Cap Pliers Into Notch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Gently squeeze the handles of the push pin/grab rail cap pliers (A), and pull the cap (B) straight out.

Fig. 350: Removing Tips Of Push Pin/Grab Rail Cap Pliers From Notch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the grab handle (A).

Fig. 351: Removing Grab Handle
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the clips (A).

GETtheMANUALS.org

Fig. 352: Removing Grab Handle Clips

26. Sunvisor - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Push the tab (A) with a flat-tip screwdriver through the hole in the front side of the bracket cover (B).

NOTE: Make sure the tab is unlocked.

Fig. 353: Pushing Tab Of Sunvisor Using Flat-Tip Screwdriver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. While pushing in the tab (A) with a flat-tip screwdriver, release the sunvisor (B) from the holder (C), and rotate the sunvisor backward 45 °.

NOTE: Make sure the tab slides into the bracket cover as you rotate the

GETtheMANUALS.org

sunvisor.

Fig. 354: Removing Sunvisor Using Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect the connector (A), then remove the sunvisor (B).

NOTE: **If the sunvisor cannot be removed, the tab has not rotated into the bracket cover. Repeat step 2 to rotate the tab.**

Fig. 355: Identifying Sunvisor And Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

27. Sunvisor Holder - Both Sides

NOTE: **Repeat this procedure on the opposite side.**

GETtheMANUALS.org

1. Turn the sunvisor holder (A) 45 ° counterclockwise, then remove it from the holder grommet (B).

Fig. 356: Turning Sunvisor Holder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the holder grommet (A).

Fig. 357: Identifying Sunvisor Holder Grommet

INSTALLATION

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

1. Moonroof Motor
    1. With the glass lift arms in the full tilt position, install the motor (A), then install the screws (B).
    2. Connect the connector (C).

Fig. 365: Identifying Moonroof Motor, Connector And Screws With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

2. Headliner - Check
    1. If the side curtain airbag has deployed, replace the headliner and removed trim pieces, along with the other parts listed for side curtain airbag deployment.
    2. To prevent the side curtain airbags from deploying improperly and possibly causing injury, inspect the headliner and all removed trim. Replace any pieces with the following damage:
        - Any creases or tears in the headliner (A)
        - Any damages around the grab handle holes (B) or the sunvisor holes (C) in the headliner
        - Any clip bases (D) which have come off the headliner
        - Any fasteners (E) or clip bases (F) which have come off the headliner

Fig. 366: Identifying Headliner, Grab Handle Holes, Sunvisor Holes, Clip Bases, Fasteners And Clip Bases
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Headliner
    1. With the help of an assistant, slide the headliner (A) through the tailgate opening.

NOTE: **Do not bend the headliner. Bending the headliner will crease and damage it.**

GETtheMANUALS.org

Fig. 367: Identifying Headliner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. With the help of an assistant, install the headliner (A), then push on the clips (B) and the fasteners (C) which will snap into place securely.

Without moonroof

Fig. 368: Identifying Headliner, Fasteners And Clips (Without Moonroof)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

With moonroof

GETtheMANUALS.org

Fig. 369: Identifying Headliner, Fasteners And Clips (With Moonroof)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. At the right quarter pillar, connect the connectors (A), and install the connector clips (B) and the harness clip (C).

Fig. 370: Identifying Right Quarter Pillar Connector And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. At the passenger's A-pillar, connect the connectors (A), and install the harness clips (B).

GETtheMANUALS.org

Fig. 371: Identifying Passenger A-Pillar Connector And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Without moonroof: At the driver's A-pillar, connect the connector (A), and install the harness clips (B).

Fig. 372: Identifying Driver A-Pillar Connector And Clips (Without Moonroof)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Sunvisor Holder
    1. Install the holder (A) into the holder grommet (B) by turning it 45 ° clockwise.
    2. Install the holder and the holder grommet as an assembly into the body by pushing it until the hooks snap into place securely.

GETtheMANUALS.org

Fig. 373: Identifying Sunvisor Holder And Grommet
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Sunvisor - Check
    1. If the side curtain airbag has deployed, replace the sunvisor, along with the other parts listed for side curtain airbag deployment.
    2. If the side curtain airbag has not deployed, inspect the sunvisor for damage. A damaged sunvisor may cause the side curtain airbags to deploy improperly, possibly causing injury. Replace the sunvisor if it has any of the following damage:
        - Any cracks in the sunvisor bracket (A)
        - Any cracks in the sunvisor bracket cover (B)
        - Any bends or cracks in the sunvisor shaft (C)
        - Any cracks in the sunvisor base (D)
        - Any cracks in the vanity mirror base (E)
    3. If the holder grommet is damaged or stress-whitened, replace the holder grommet and the holder as an assembly.

14. Quarter Pillar Trim - Check
    1. If the side curtain airbag has deployed, replace the quarter pillar trim (A), along with the other parts listed for side curtain airbag deployment.
    2. If the side curtain airbag has not deployed, check the quarter pillar trim and note the following items:
        - To prevent the side curtain airbags from deploying improperly and possibly causing injury, inspect the quarter pillar trim and replace it with a new one if it has any of the following damage:
            - Any cracks, deformations, or stress-whitening in the quarter pillar trim
            - Any cracks or stress-whitened areas in the clip seating surfaces (B)
        - After checking and adjusting the overlap between the headliner and the quarter pillar trim, replace the upper clip (C) with a new one.
        - If the clips (D) are damaged or stress-whitened, replace them with new ones.

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Headliner/Pillar Trim Overlap - Check

Checking and Adjusting the Headliner/Pillar Trim Overlap

To prevent the side curtain airbag from deploying and damaging the pillar trim (A-pillar trim, B-pillar trim, quarter pillar trim), the overlap between the headliner and pillar trim must be 8.0+0/-2.0 mm (0.31+0/-0.08 in). To check the overlap, do this:

1. Install the headliner (A) and the pillar trim (B).

GETtheMANUALS.org

This illustration shows the A-pillar.

Fig. 387: Identifying Headliner And Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Apply masking tape (A) to the headliner (B) to mark the upper edge of the pillar trim (C).

This illustration shows the A-pillar.

Fig. 388: Applying Mask Tape To Headliner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the pillar trim, and measure the headliner overlap.
   - If the overlap is 8.0+0/-2.0 mm (0.31+0/-0.08 in), remove the tape, and install the pillar trim.
   - If the overlap is more than 8.0 mm (0.31 in), go to step 4.

GETtheMANUALS.org

Fig. 389: Measuring Headliner Overlap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Carefully trim the headliner with a utility knife, reducing the overlap to 8.0+0/-2.0 mm (0.31+0/-0.08 in).
5. Remove the tape, and install the pillar trim.

Fig. 390: Triming Headliner Using Utility Knife
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Quarter Pillar Trim - Both Sides
    1. Install a new clip (A) to the quarter pillar trim (B).

GETtheMANUALS.org

Fig. 391: Installing Quarter Pillar Trim Into Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Pass the rear seat belt lower anchor (A) through the hole in the quarter pillar trim (B).
3. Fit the clips into the holes in the quarter pillar.
4. Lightly push the quarter pillar trim into place, then install the trim.

NOTE:

- **Make sure the side curtain airbag is not tucked under the clips or the ribs.**
- **Do not push too hard on the quarter pillar trim. If you push too hard, the clip will be damaged, and it will not hold the trim properly.**
- **Gently tug on the quarter pillar trim to verify that all clips are securely fastened.**
- **Make sure the clips (C, D, and E) snap into place securely.**

GETtheMANUALS.org

26. B-Pillar Upper/Lower Trim - Check
    1. If the side curtain airbag has deployed, replace the B-pillar upper trim (A) and the B-pillar lower trim (B), along with the other parts listed for side curtain airbag deployment.
    2. If the side curtain airbag has not deployed, check the B-pillar upper/lower trim and note the following items:
        - To prevent the side curtain airbags from deploying improperly and possibly causing injury, inspect the trim and replace it with a new one if it has any of the following damage:
            - Any cracks or deformations in the B-pillar upper trim or the upper hooks (C), or any stress-whitened areas in the upper part of the trim
            - Any cracks or deformations in the B-pillar lower trim, or any breakages in the part (D) fitted with the B-pillar upper trim
            - Any cracks or stress-whitening areas in the clip seating surfaces (E)
        - If the clips (F) are damaged or stress-whitened, replace them with new ones.

Trim inspection

GETtheMANUALS.org

27. Headliner/Pillar Trim Overlap - Check

Checking and Adjusting the Headliner/Pillar Trim Overlap

To prevent the side curtain airbag from deploying and damaging the pillar trim (A-pillar trim, B-pillar trim, quarter pillar trim), the overlap between the headliner and pillar trim must be 8.0+0/-2.0 mm (0.31+0/-0.08 in). To check the overlap, do this:

1. Install the headliner (A) and the pillar trim (B).

This illustration shows the A-pillar.

GETtheMANUALS.org

Fig. 412: Identifying Headliner And Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Apply masking tape (A) to the headliner (B) to mark the upper edge of the pillar trim (C).

This illustration shows the A-pillar.

Fig. 413: Applying Mask Tape To Headliner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the pillar trim, and measure the headliner overlap.
   - If the overlap is 8.0+0/-2.0 mm (0.31+0/-0.08 in), remove the tape, and install the pillar trim.
   - If the overlap is more than 8.0 mm (0.31 in), go to step 4.

This illustration shows the A-pillar.

Fig. 414: Measuring Headliner Overlap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Carefully trim the headliner with a utility knife, reducing the overlap to 8.0+0/-2.0 mm (0.31+0/-0.08 in).
5. Remove the tape, and install the pillar trim.

GETtheMANUALS.org

This illustration shows the A-pillar.

TEST

1. Moonroof Switch - Test

NOTE: When doing the moonroof switch test, install the bulb correctly.

1. Check for continuity between the terminals in each switch position according to the table.
2. If the continuity check is not as specified, replace the switch.

GETtheMANUALS.org

MOONROOF WIND DEFLECTOR REMOVAL AND INSTALLATION

GETtheMANUALS.org

REMOVAL

1. Moonroof Deflector
    1. Open the glass fully.
    2. Remove both moonroof wind deflector links (A).

Fig. 463: Removing Moonroof Wind Deflector Links
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the moonroof wind deflector (A).

Fig. 464: Removing Moonroof Wind Deflector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Carefully pry up on the moonroof deflector arm bases (A) with a flat-tip screwdriver and release the hooks (B), then remove the bases with the deflector arm springs (C) from both sides.

GETtheMANUALS.org

Fig. 465: Removing Bases With Deflector Arm Springs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Moonroof Deflector
    1. Install both moonroof wind deflector arm bases (A) until they click into the notch in the rail.

Fig. 466: Identifying Moonroof Wind Deflector Arm Bases
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Install the moonroof wind deflector (A).

GETtheMANUALS.org

Fig. 467: Installing Moonroof Wind Deflector

3. Install both moonroof wind deflector links (A).

Fig. 468: Installing Moonroof Wind Deflector Links
Courtesy of AMERICAN HONDA MOTOR CO., INC.

RESETTING THE MOONROOF CONTROL UNIT

PROCEDURE

1. Moonroof Control Unit - Reset

   Resetting the moonroof is required when any of the following have occurred:

   - The moonroof stops on the track during AUTO/MANUAL operation.
   - The moonroof does not work by auto operation.
   - The moonroof was moved manually while the battery was dead or disconnected.

GETtheMANUALS.org

- The moonroof motor was removed or replaced with a new one.
- Any of components related to the moonroof were replaced or removed and installed.
  - Wind deflector
  - Moonroof glass
  - Moonroof glass bracket
  - Moonroof frame/Drain channel slider and cable assembly
  - Moonroof cables, etc.

To reset the moonroof control unit, do these steps:

1. Close the driver's door, and leave it closed until the procedure is complete.
2. Turn the ignition switch to LOCK (0).

Fig. 469: Ignition Switch And Moonroof Tilt Switch Blinking Pattern
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Press and hold the tilt switch, and turn the ignition switch to ON (II).
4. Release the tilt switch, and turn the ignition switch to LOCK (0).
5. Repeat steps 3 and 4 four more times.
6. Check if the AUTO OPEN and AUTO CLOSE function still work. If they still work, the AUTO functions have not been cleared, go back to step 1. If the AUTO functions have been cleared, go to step 7.
7. Press and hold the moonroof close switch until moonroof is fully tilt opened.
8. Confirm that the moonroof control unit is reset by using the moonroof AUTO OPEN and AUTO CLOSE function.

MOONROOF CONTROL UNIT INPUT TEST

NOTE:

- **Before testing, make sure the No. B5 (10 A) fuse in the under-dash fuse/relay box is OK.**
- **If the moonroof works OK manually, but will not work in AUTO, or reverses**

GETtheMANUALS.org

frequently (obstacle detection), RESET THE MOONROOF BEFORE PROCEEDING with the input test.

1. Turn the ignition switch to LOCK (0).
2. **DISCONNECT THE MOONROOF CONTROL UNIT/MOTOR 14P CONNECTOR**.

Fig. 470: Identifying Moonroof Control Unit/Motor 14P Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Inspect the connector and socket terminals to be sure they are all making good contact:
   - If the terminals are bent, loose, or corroded, repair them as necessary, and recheck the system.
   - If the terminals are OK, go to step 4.
4. With the connector still disconnected, do the following input tests:
   - If any test indicates a problem, find and correct the cause, then recheck the system.
   - If all the input tests prove OK, go to step 5.

Cavity	Wire	Test condition	Test: Desired result	Possible cause if desired result is not obtained
11	GRN	Disconnect under-dash fuse/relay box connector R (8P)	Check for continuity between terminal No. 11 and under-dash fuse/relay box connector R (8P) terminal No. 6: There should be continuity.	An open or high resistance in the wire
			Check for continuity to ground: There should be no continuity.	A short to ground in the wire
5	GRN	Jump the SCS line with the HDS, **disconnect PCM connector A (49P)** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or	Check for continuity between terminal No. 5 and PCM connector A (49P) No. 26: There should be continuity.	An open or high resistance in the wire

GETtheMANUALS.org

		HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS	Check for continuity to ground: There should be no continuity.	A short to ground in the wire

5. Reconnect the connector to the moonroof control unit/motor, and do the following input tests:
   - If any test indicates a problem, find and correct the cause, then recheck the system.
   - If all the input tests prove OK, **REPLACE THE MOONROOF CONTROL UNIT/MOTOR**.

NOTE: **After replacing the moonroof control unit/motor, DO THE MOONROOF CONTROL UNIT RESETTING PROCEDURE.**

Cavity	Wire	Test condition	Test: Desired result	Possible cause if desired result is not obtained
1	RED	Under all conditions	Measure the voltage to ground: There should be battery voltage.	• Blown No. B11 (20 A) fuse in the under-dash fuse/relay box • An open or high resistance in the wire
10	GRY	Ignition switch ON (II)	Measure the voltage to ground: There should be battery voltage.	• Blown No. B6 (7.5 A) fuse in the under-dash fuse/relay box • An open or high resistance in the wire
4	BLK	In all ignition switch positions	Measure the voltage to ground: There should be less than 0.2 V.	• Poor ground (G501) • An open or high resistance in the ground wire
9	ORN	Ignition switch ON (II), moonroof switch in CLOSE position	Measure the voltage to ground: There should be less than 0.2 V.	• Faulty moonroof switch • Poor ground (G501) or an open in the ground wire • An open or high resistance in the wire
		Ignition switch ON (II), moonroof switch released	Measure the voltage to ground: There should be battery voltage.	• Faulty moonroof switch • A short to ground in the wire
8	LT GRN	Ignition switch ON (II), moonroof switch in TILT position	Measure the voltage to ground: There should be less than 0.2 V.	• Faulty moonroof switch • Poor ground (G501) or an open in the ground wire • An open or high resistance in the wire

GETtheMANUALS.org

		Ignition switch ON (II), moonroof switch released	Measure the voltage to ground: There should be battery voltage.	• Faulty moonroof switch • A short to ground in the wire
7	LT BLU	Ignition switch ON (II), moonroof switch in OPEN position	Measure the voltage to ground: There should be less than 0.2 V.	• Faulty moonroof switch • Poor ground (G501) or an open in the ground wire • An open or high resistance in the wire
		Ignition switch ON (II), moonroof switch released	Measure the voltage to ground: There should be battery voltage.	• Faulty moonroof switch • A short to ground in the wire
14	PUR	Ignition switch ON (II), moonroof switch in AUTO (OPEN) or AUTO (CLOSE) position	Measure the voltage to ground: There should be less than 0.2 V.	• Faulty moonroof switch • Poor ground (G501) or an open in the ground wire • An open or high resistance in the wire
		Ignition switch ON (II), moonroof switch released	Measure the voltage to ground: There should be battery voltage.	• Faulty moonroof switch • A short to ground in the wire

GETtheMANUALS.org

EPS SYMPTOM TROUBLESHOOTING INDEX

When the vehicle has one of these symptoms, check for a diagnostic trouble code (DTC) with the HDS. If there is no DTC, do the diagnostic procedure for the symptom, in the sequence listed, until you find the cause.

Symptom	Diagnostic Procedure
HDS does not communicate with the EPS control unit or the vehicle	**TROUBLESHOOT THE DLC CIRCUIT** .
Steering pull	**Symptom Troubleshooting** .
EPS indicator does not come on	**Symptom Troubleshooting** .
EPS indicator does not go off, and no DTCs are stored	**Symptom Troubleshooting** .
EPS indicator is not on, no DTCs are stored, but there is no power assist or power assist is reduced	○ 1. Check the EPS motor power wires between the EPS control unit and the EPS motor for a short to body ground. Repair as needed. ○ 2. If the EPS motor power wires are OK, replace the EPS motor (short in the EPS motor). ○ 3. Check the power and body ground connections at the EPS control unit.

GETtheMANUALS.org

POWER STEERING ASSIST CHECK

CHECK

1. Power Steering Assist Check

NOTE: **This test should be done with original equipment tires and wheels at the correct tire pressure.**

1. Start the engine, and let it idle.
2. Attach a commercially available spring scale (A) to the steering wheel. With the engine idling and the vehicle on a clean, dry floor, pull the scale as shown, and read it as soon as the tires begin to turn.

   Initial turning load: 34 N (3.5 kgf, 7.6 lbf)

3. If the scale reads no more than the specification, the power assist is OK. If it reads more, check these items:
   - Steering linkage
   - Rack guide adjustment
   - EPS system

Fig. 1: Checking Power Steering Assist Using Spring Scale
Courtesy of AMERICAN HONDA MOTOR CO., INC.

STEERING ANGLE SENSOR NEUTRAL POSITION CLEAR

GETtheMANUALS.org

PROCEDURE

1. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 2: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Steering Angle Sensor Neutral Position - Clear
    1. Select EPS ADJUSTMENT, then select EPS STEERING ANGLE SENSOR VALUE CLEAR and follow the screen prompts on the HDS.

NOTE: See the HDS Help menu for specific instructions.

STEERING ANGLE SENSOR REMOVAL AND INSTALLATION

REMOVAL

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** , and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

1. Battery Terminal (SRS) - Disconnection
    1. Make sure the ignition switch is in LOCK (0).
    2. Disconnect and isolate the negative cable (A) from the battery.

NOTE: Always disconnect the negative side first.

GETtheMANUALS.org

3. Disconnect the positive cable (B) from the battery.
4. Wait at least 3 minutes before starting work.

Fig. 3: Identifying Battery Positive And Negative Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Driver's Airbag
    1. Remove the access panel (A).
    2. Disconnect the driver's airbag inflator connector (B) on the cable reel harness.
    3. Disconnect the horn switch connector (C).

Fig. 4: Identifying Driver Airbag Inflator Connector, Horn Switch Connector And Access Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

4. Remove the TORX bolts using a TORX T30 bit.
5. Remove the driver's airbag (A).

Fig. 5: Identifying Driver Airbag
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Steering Wheel Assembly
    1. Set the front wheels in the straight ahead position.
    2. Disconnect the connector (A).
    3. Loosen the steering wheel bolt (B) three turns.

Fig. 6: Identifying Steering Wheel Bolt And Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install a commercially available steering wheel puller (A) on the steering wheel (B).

GETtheMANUALS.org

5. Free the steering wheel from the steering column shaft by turning the pressure bolt (C) of the puller.

   Note these items when removing the steering wheel:

   - Do not tap on the steering wheel or the steering column shaft when removing the steering wheel.
   - If you thread the puller bolts (D) into the wheel hub more than five threads, the bolts will hit the cable reel and damage it. To prevent this, install a pair of jam nuts five threads up on each puller bolt.

Fig. 7: Removing Steering Wheel From Steering Column Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the steering wheel puller.
7. Remove the steering wheel (A) from the steering column.

GETtheMANUALS.org

Fig. 8: Identifying Steering Wheel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Upper Column Cover
    1. Carefully pry out the dashboard meter visor blind cover (A) with the appropriate trim tool to detach the clips (B) and the hook (C), then tuck up the dashboard meter visor blind cover.

Fig. 9: Identifying Dashboard Meter Visor Blind Cover, Hooks And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the upper column cover (A).

GETtheMANUALS.org

Fig. 10: Identifying Upper Column Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Lower Column Cover
    1. Remove the screws (A) securing the lower column cover (B) from the front side.

Fig. 11: Identifying Lower Column Cover And Screws (Front Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the screw (A), then remove the lower column cover (B).

GETtheMANUALS.org

Fig. 12: Identifying Lower Column Cover And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Cable Reel/Steering Angle Sensor
    1. Disconnect cable reel connector A on the dashboard wire harness, cable reel connector B on the dashboard wire harness, and the steering angle sensor connector (C).

Fig. 13: Identifying Steering Angle Sensor And Cable Reel Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

2. Remove the cable reel/steering angle sensor (A).

Fig. 14: Identifying Cable Reel/Steering Angle Sensor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Steering Angle Sensor
    1. Remove the steering angle sensor (A) from the cable reel (B).

Fig. 15: Identifying Steering Angle Sensor And Cable Reel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

INSTALLATION

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** , and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

1. Steering Angle Sensor
    1. Install the steering angle sensor (A) to the cable reel (B).

Fig. 16: Identifying Steering Angle Sensor And Cable Reel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Cable Reel/Steering Angle Sensor
    1. Install the cable reel/steering angle sensor (A).

GETtheMANUALS.org

Fig. 17: Identifying Cable Reel/Steering Angle Sensor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Connect cable reel connector A on the dashboard wire harness, cable reel connector B on the dashboard wire harness, and the steering angle sensor connector (C).

Fig. 18: Identifying Steering Angle Sensor And Cable Reel Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Lower Column Cover
    1. Push in on the lower column cover just above ignition switch opening (A) to engage the column cover with the locking tab (B).

GETtheMANUALS.org

Fig. 19: Engaging Column Cover With Locking Tab
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the lower column cover (A), then install the screw (B).

Fig. 20: Identifying Lower Column Cover And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the screws (A) securing the lower column cover (B) from the front side.

GETtheMANUALS.org

Fig. 21: Identifying Lower Column Cover And Screws (Front Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Upper Column Cover
    1. Install the upper column cover (A).

Fig. 22: Identifying Upper Column Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Install the dashboard meter visor blind cover (A). Make sure the clips (B) and the hook (C) snap into place securely.

GETtheMANUALS.org

Fig. 23: Identifying Dashboard Meter Visor Blind Cover, Hooks And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Steering Wheel Assembly
    1. Make sure the front wheels are pointing straight ahead.
    2. Center the cable reel (A). Do this by first rotating the cable reel clockwise until it stops.
    3. Rotate the cable reel counterclockwise about three full turns. The arrow mark (B) on the cable reel label should point straight up.

Fig. 24: Identifying Cable Reel And Label Mark
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    4. Position the steering wheel hub (A) so that it engages the pin (B) of the cable reel.

GETtheMANUALS.org

5. Install the steering wheel (C) on to the steering column shaft.

NOTE: **Do not tap on the steering wheel or the steering column shaft when installing the steering wheel.**

Fig. 25: Identifying Steering Wheel, Hub And Pin
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the steering wheel bolt (A), and tighten it to the specified torque.
7. Connect the connector (B).
8. Make sure the wire harness is routed and fastened properly.

Fig. 26: Identifying Steering Wheel Bolt And Connector With Torque Specifications

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Driver's Airbag

NOTE: **If you are replacing a deployed driver's airbag, inspect the cable reel for heat damage. If there is any damage, replace the cable reel.**

1. Place the driver's airbag (A) in the steering wheel.
2. Tighten the new TORX bolts using a TORX T30 bit.

NOTE: **Make sure the clearance (B) between the steering wheel and the horn pad is the specified value.**

Fig. 27: Identifying Driver Airbag With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

Fig. 28: Identifying Clearance Between Steering Wheel And Horn Pad
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Connect the driver's airbag inflator connector (A) on the cable reel harness.
4. Connect the horn switch connector (B).

NOTE: **After reconnecting the negative cable to the battery, make sure the horn works properly.**

5. Install the access panel (C).

Fig. 29: Identifying Driver Airbag Inflator Connector, Horn Switch Connector And Access Panel

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Battery Terminal (SRS) - Reconnection

NOTE: If the battery performance is abnormal, test the battery.

1. Clean the battery terminals.
2. Connect the positive cable (A) to the battery.

NOTE: Always connect the positive side first.

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

Fig. 30: Identifying Battery Positive And Negative Cable With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Steering Wheel Spoke Angle - Check
   1. Check the steering wheel spoke angle.
   2. If steering spoke angles to the right and left are not equal (steering wheel is not centered), correct the engagement of the wheel/column shaft splines.
9. HDS DLC - Connection
   1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
   2. Turn the ignition switch to ON (II).
   3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

GETtheMANUALS.org

Fig. 31: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. VSA Sensor Neutral Position - Memorization
    1. Park the vehicle on a flat and level surface, with the steering wheel in the straight ahead position.
    2. Select VSA ADJUSTMENT, then select ALL SENSORS with the HDS, and follow the screen prompts.

    NOTE: See the HDS Help menu for specific instructions.

11. Steering Angle Sensor Neutral Position - Clear
    1. Select EPS ADJUSTMENT, then select EPS STEERING ANGLE SENSOR VALUE CLEAR and follow the screen prompts on the HDS.

    NOTE: See the HDS Help menu for specific instructions.

STEERING COLUMN COVER REMOVAL AND INSTALLATION

REMOVAL

1. Upper Column Cover
    1. Carefully pry out the dashboard meter visor blind cover (A) with the appropriate trim tool to detach the clips (B) and the hook (C), then tuck up the dashboard meter visor blind cover.

GETtheMANUALS.org

Fig. 32: Identifying Dashboard Meter Visor Blind Cover, Hooks And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Detach the hooks (A), then remove the upper column cover (B).

Fig. 33: Identifying Upper Column Cover And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Lower Column Cover
    1. Turn the steering wheel to the left. Remove the screw (A) securing the lower column cover (B) from the front side.
    2. Turn the steering wheel to the right. Remove the screw securing the lower column cover from the front side.

GETtheMANUALS.org

Fig. 34: Turning Steering Wheel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the screw (A), then remove the lower column cover (B).

GETtheMANUALS.org

STEERING COLUMN INSPECTION

INSPECTION

1. Steering Column Inspection (In Car)

   Check of Tilting Force

   1. Set the steering wheel in the straight ahead driving position, and loosen the lock lever fully.
   2. Attach a commercially available spring scale (A) to the highest point of the steering wheel, and tilt the steering column to the lowest position.
   3. Pull the spring scale straight up, and read the force required to move the steering column.
   4. Attach the spring scale to the lowest point of the steering wheel.
   5. Pull the spring scale straight down, and read the force required to move the steering column.

      Tilting force (upward/downward):

      Standard: 69 N (7.0 kgf, 16 lbf) max .

   6. If the measurement is higher than the specified, replace the steering column as an assembly.

GETtheMANUALS.org

Fig. 41: Checking Steering Wheel Tilting Force Using Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Check of Telescoping Force

1. Set the steering wheel in the straight ahead driving position, and loosen the lock lever fully.
2. Attach a commercially available spring scale (A) to the center point of the steering wheel as shown.
3. Pull the spring scale, and read the force required to move the steering column during telescoping out.

   Telescoping force:

   Standard: 90 N (9.2 kgf, 20 lbf) max .

4. If the measurement is higher than specified, replace the steering column as an assembly.

Fig. 42: Checking Telescoping Force Using Spring Scale
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

Check of Lock Lever Force

1. Move the lock lever (A) from the loosened position to the locked position three to five times, then release the lock lever. Adjust the steering column to the center tilt position and also to the full telescopic out position, and hold the steering wheel.
2. Using a commercially available push-pull gauge, push up the lock lever 10 mm (0.39 in) in from its end, and measure the force required to move the lock lever.

   Lock lever force:

   Standard: 82 N (8.4 kgf, 18 lbf) max .

3. If the measurement is higher than specified, replace the steering column as an assembly.

Fig. 43: Pushing Lock Lever
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REMOVAL

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** , and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

1. Battery Terminal (SRS) - Disconnection
   1. Make sure the ignition switch is in LOCK (0).
   2. Disconnect and isolate the negative cable (A) from the battery.

      NOTE: Always disconnect the negative side first.

   3. Disconnect the positive cable (B) from the battery.
   4. Wait at least 3 minutes before starting work.

GETtheMANUALS.org

Fig. 44: Identifying Battery Positive And Negative Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Driver's Airbag
    1. Remove the access panel (A).
    2. Disconnect the driver's airbag inflator connector (B) on the cable reel harness.
    3. Disconnect the horn switch connector (C).

Fig. 45: Identifying Access Panel, Driver's Airbag Inflator Connector And Horn Switch Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    4. Remove the TORX bolts using a TORX T30 bit.
    5. Remove the driver's airbag (A).

GETtheMANUALS.org

3. Disconnect the connectors (A).

Fig. 55: Identifying Combination Switch Body Assembly Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the combination switch body assembly (A) from the steering column shaft.

Fig. 56: Identifying Combination Switch Body Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Driver's Dashboard Undercover
    1. Turn the lock knob (A) 90 °, then gently pull down the front edge of the driver's dashboard undercover (B) to detach the clip (C).
    2. Pull away the undercover to release the pin (D) from the holder (E), then remove the driver's dashboard undercover.

GETtheMANUALS.org

Fig. 57: Identifying Driver's Dashboard Undercover, Lock Knob, Holder, Clip And Pin
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Steering Joint Cover
    1. Remove the steering joint cover (A).

Fig. 58: Identifying Steering Joint Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Steering Column Lower Slide Shaft - Hold
    1. Set the steering column to the center tilt position, and to the center telescopic position.

GETtheMANUALS.org

2. Hold the lower slide shaft (A) on the column with a piece of wire (B) between the joint yoke (C) of the lower slide shaft and the joint yoke (D) of the upper shaft to prevent the lower slider shaft from pulling out.

Fig. 59: Holding Lower Slide Shaft On Column Using Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Steering Joint - Disconnection
    1. Remove the steering joint bolt (A).
    2. Disconnect the steering joint (B) from the pinion shaft.

NOTE:

- **If the center guide (C) is in place and has not moved, leave it in place.**
- **If the center guide has come off, discard it.**

Fig. 60: Identifying Steering Joint, Center Guide And Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Steering Column

GETtheMANUALS.org

1. Disconnect the connectors (A) from the ignition switch (B).

Fig. 61: Identifying Steering Column, Connectors, Ignition Switch And Wire Harness Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Detach the wire harness clips (C) from the steering column.
3. Remove the steering column (D).

NOTE: **Do not release the lock lever until the steering column is installed. If the lock lever is released before installation, adjust the steering column after installation.**

INSPECTION

1. Steering Column Inspection
   1. Check these items:
      - Check the upper ball bearing (A) and the lower ball bearing (B) for play and proper movement. If any bearing is noisy or has excessive play, replace the steering column as an assembly.
      - Check the spline shaft (C) for smooth movement in and out. If the spline shaft is removed, slip it into the spline tube by aligning the paint or stamped marks (D). If it sticks or binds, replace the steering column as an assembly.
      - Check the coat plates (E) for distortion or breakage. If there is distortion or breakage, replace

GETtheMANUALS.org

the steering column as an assembly.

- Check the tilt mechanism and telescopic mechanism for movement and damage.
- Check the absorbing plates (F) for distortion or breakage. If there is distortion or breakage, replace the steering column as an assembly.
- Apply multipurpose grease to the steering column.

NOTE: Do not use the silicone grease.

Fig. 62: Identifying Steering Column And Related Components
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** , and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

1. Steering Column
    1. Install the steering column (A).

NOTE: Do not release the lock lever until the steering column is installed. If the lock lever is released before installation, adjust the steering column after installation.

GETtheMANUALS.org

Fig. 63: Identifying Steering Column And Related Components With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Loosely tighten the attaching nuts and bolts.
3. Tighten the attaching nuts and bolts to the specified torque in the sequence shown.
4. Install the wire harness clips (B) to the steering column.
5. Connect the connectors (C) to the ignition switch (D).

2. Steering Column Lower Slide Shaft - Release
   1. Cut the wire (A).

Fig. 64: Identifying Steering Column Lower Slide Shaft And Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

3. Steering Joint - Reconnection
    1. Place the rack in the straight ahead driving position.
    2. Slip the lower end of the steering joint (A) onto the pinion shaft (B).

NOTE:

- **Pinion shaft with center guide: Install the steering joint by aligning the center guide (C).**
- **Pinion shaft without center guide: Position the steering column by aligning the gap (D) within the angle.**

Fig. 65: Identifying Steering Joint, Pinion Shaft And Center Guide
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Align the bolt hole (A) on the steering joint with the groove (B) around the pinion shaft.
    4. Loosely install the steering joint bolt (C).
    5. Be sure that the joint bolt is securely in the groove in the pinion shaft.
    6. Pull on the steering joint to make sure that the steering joint is fully seated.
    7. Tighten the steering joint bolt to the specified torque.

GETtheMANUALS.org

Fig. 66: Identifying Pinion Shaft Groove, Steering Joint Bolt And Bolt Hole With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Steering Joint Cover
    1. Install the steering joint cover (A).

Fig. 67: Identifying Steering Joint Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Driver's Dashboard Undercover
    1. Install the driver's dashboard undercover (A). Make sure the clip (B) snap into place securely, and the pin (C) into the holder (D) securely.
    2. Turn the lock knob (E) 90 °.

GETtheMANUALS.org

Fig. 68: Identifying Driver's Dashboard Undercover, Lock Knob, Holder, Pin And Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Combination Switch Body Assembly
    1. Install the combination switch body assembly (A).
    2. Tighten three screws (B) in the sequence shown.

Fig. 69: Identifying Combination Switch Body Assembly Mounting Screws Tightening Sequence
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Connect the connectors (A).

GETtheMANUALS.org

Fig. 70: Identifying Combination Switch Body Assembly Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Connect the connectors (A).
5. Install the clip (B).

Fig. 71: Identifying Combination Switch Body Assembly Connectors And Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Lower Column Cover
    1. Push in on the lower column cover just above ignition switch opening (A) to engage the column cover with the locking tab (B).

GETtheMANUALS.org

Fig. 72: Engaging Column Cover With Lock Tab
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the lower column cover (A), then install the screw (B).

Fig. 73: Identifying Lower Column Cover And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the screws (A) securing the lower column cover (B) from the front side.

GETtheMANUALS.org

Fig. 74: Identifying Lower Column Cover And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Upper Column Cover
    1. Install the upper column cover (A).

Fig. 75: Identifying Upper Column Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Install the dashboard meter visor blind cover (A). Make sure the clips (B) and the hook (C) snap into place securely.

GETtheMANUALS.org

Fig. 76: Identifying Dashboard Meter Visor Blind Cover, Hooks And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Steering Wheel Assembly
    1. Make sure the front wheels are pointing straight ahead.
    2. Center the cable reel (A). Do this by first rotating the cable reel clockwise until it stops.
    3. Rotate the cable reel counterclockwise about three full turns. The arrow mark (B) on the cable reel label should point straight up.

Fig. 77: Identifying Cable Reel With Arrow Mark
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    4. Position the steering wheel hub (A) so that it engages the pin (B) of the cable reel.

GETtheMANUALS.org

5. Install the steering wheel (C) on to the steering column shaft.

NOTE: **Do not tap on the steering wheel or the steering column shaft when installing the steering wheel.**

Fig. 78: Identifying Steering Wheel, Hub And Pin
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the steering wheel bolt (A), and tighten it to the specified torque.
7. Connect the connector (B).
8. Make sure the wire harness is routed and fastened properly.

Fig. 79: Identifying Steering Wheel Bolt And Connector With Torque Specifications

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Driver's Airbag

NOTE: If you are replacing a deployed driver's airbag, inspect the cable reel for heat damage. If there is any damage, replace the cable reel.

1. Place the driver's airbag (A) in the steering wheel.
2. Tighten the new TORX bolts using a TORX T30 bit.

NOTE: Make sure the clearance (B) between the steering wheel and the horn pad is the specified value.

Fig. 80: Identifying Driver Airbag With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

Fig. 81: Identifying Clearance Between Steering Wheel And Horn Pad
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Connect the driver's airbag inflator connector (A) on the cable reel harness.
4. Connect the horn switch connector (B).

NOTE: **After reconnecting the negative cable to the battery, make sure the horn works properly.**

5. Install the access panel (C).

Fig. 82: Identifying Driver Airbag Inflator Connector, Horn Switch Connector And Access Panel

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Battery Terminal (SRS) - Reconnection

NOTE: If the battery performance is abnormal, test the battery.

1. Clean the battery terminals.
2. Connect the positive cable (A) to the battery.

NOTE: Always connect the positive side first.

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

Fig. 83: Identifying Battery Positive And Negative Cable With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Steering After Install - Check
    1. After installation, check these items:
        - Start the engine, allow it to idle, and turn the steering wheel from lock to lock several times.
        - Check that the EPS indicator does not come on.
        - Check the steering wheel spoke angle. If steering spoke angles to the right and left are not equal (steering wheel and rack are not centered), correct the engagement of the joint/pinion shaft splines.
13. Pre-Alignment Checks

For proper inspection and adjustment of the wheel alignment, do these checks:

GETtheMANUALS.org

1. Release the parking brake to avoid an incorrect measurement.
2. Make sure the suspension is not modified.
3. Make sure the fuel tank is full, and that the spare tire, the jack, and the tools are in place on the vehicle.
4. Check the tire size and tire pressure according to tire information.
5. Set the steering column to the middle tilt position and telescopic position.

14. Front Toe - Inspection

Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

1. Set the steering column to the middle tilt position and telescopic positions.
2. Center the steering wheel spokes, and install a steering wheel holder tool.
3. Check the toe with the wheels pointed straight ahead.

Front toe-in: 0±2 mm (0±0.08 in)

- If adjustment is required, go to the front toe adjustment.
- If no adjustment is required, remove the alignment equipment.

15. HDS DLC - Connection

1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
2. Turn the ignition switch to ON (II).
3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 84: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

16. VSA Sensor Neutral Position - Memorization
    1. Park the vehicle on a flat and level surface, with the steering wheel in the straight ahead position.
    2. Select VSA ADJUSTMENT, then select ALL SENSORS with the HDS, and follow the screen prompts.

    NOTE: See the HDS Help menu for specific instructions.

17. Steering Angle Sensor Neutral Position - Clear
    1. Select EPS ADJUSTMENT, then select EPS STEERING ANGLE SENSOR VALUE CLEAR and follow the screen prompts on the HDS.

    NOTE: See the HDS Help menu for specific instructions.

STEERING COLUMN REMOVAL AND INSTALLATION

REMOVAL

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** , and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

1. Battery Terminal (SRS) - Disconnection
    1. Make sure the ignition switch is in LOCK (0).
    2. Disconnect and isolate the negative cable (A) from the battery.

    NOTE: Always disconnect the negative side first.

    3. Disconnect the positive cable (B) from the battery.
    4. Wait at least 3 minutes before starting work.

GETtheMANUALS.org

Fig. 85: Identifying Battery Positive And Negative Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Driver's Airbag
    1. Remove the access panel (A).
    2. Disconnect the driver's airbag inflator connector (B) on the cable reel harness.
    3. Disconnect the horn switch connector (C).

Fig. 86: Identifying Access Panel, Driver's Airbag Inflator Connector And Horn Switch Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    4. Remove the TORX bolts using a TORX T30 bit.
    5. Remove the driver's airbag (A).

GETtheMANUALS.org

Fig. 87: Identifying Driver's Airbag And Torx Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Steering Wheel Assembly
    1. Set the front wheels in the straight ahead position.
    2. Disconnect the connector (A).
    3. Loosen the steering wheel bolt (B) three turns.

Fig. 88: Identifying Steering Wheel Connector And Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    4. Install a commercially available steering wheel puller (A) on the steering wheel (B).
    5. Free the steering wheel from the steering column shaft by turning the pressure bolt (C) of the puller.

GETtheMANUALS.org

Note these items when removing the steering wheel:

- Do not tap on the steering wheel or the steering column shaft when removing the steering wheel.
- If you thread the puller bolts (D) into the wheel hub more than five threads, the bolts will hit the cable reel and damage it. To prevent this, install a pair of jam nuts five threads up on each puller bolt.

Fig. 89: Turning Steering Wheel Pressure Bolt Using Puller
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the steering wheel puller.
7. Remove the steering wheel (A) from the steering column.

Fig. 90: Identifying Steering Wheel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

4. Upper Column Cover
    1. Carefully pry out the dashboard meter visor blind cover (A) with the appropriate trim tool to detach the clips (B) and the hook (C), then tuck up the dashboard meter visor blind cover.

Fig. 91: Identifying Dashboard Meter Visor Blind Cover, Hooks And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the upper column cover (A).

Fig. 92: Identifying Upper Column Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

5. Lower Column Cover
    1. Remove the screws (A) securing the lower column cover (B) from the front side.
